

Purpose

The purpose of this quick reference guide is to step through the process of creating an Assignment Variation for an Interpretation Rule. The intended audience for this document are system administrators / standard users.

Steps

Create a new Interpretation Variation Rule

The Interpretation Variation record type allows for variations to be applied to an Interpretation Rule with only minimal information input, and without the need to create a completely new Interpretation Rule.

The Assignment Variation is used for part-time Employees who have differing frequency standard hours from those outlined in the Interpretation Rule associated with the Payee's Assignment record.

The Assignment Variation record allows select information input in the following sections of the Interpretation Rule Builder to override the data captured in the original Interpretation Rule:

- Basic Information
- Frequency Hours Rules

Create a Assignment Variation by following the below steps:

1. Click on the **App Launcher** icon (see Figure 1).
2. Go to the **Interpretation Rule** object by using the Search function (see Figure 2).

Figure 1

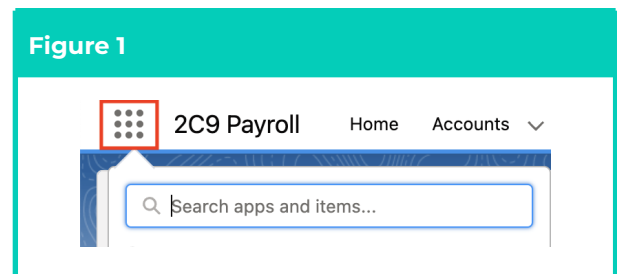

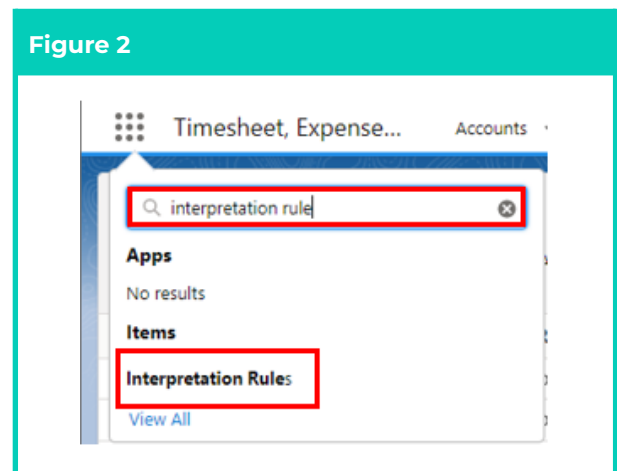

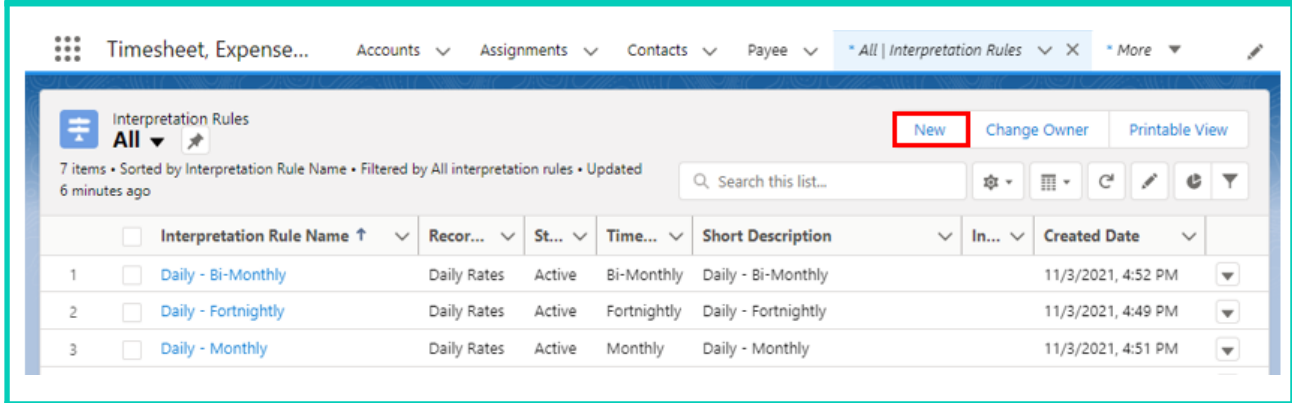

Figure 2

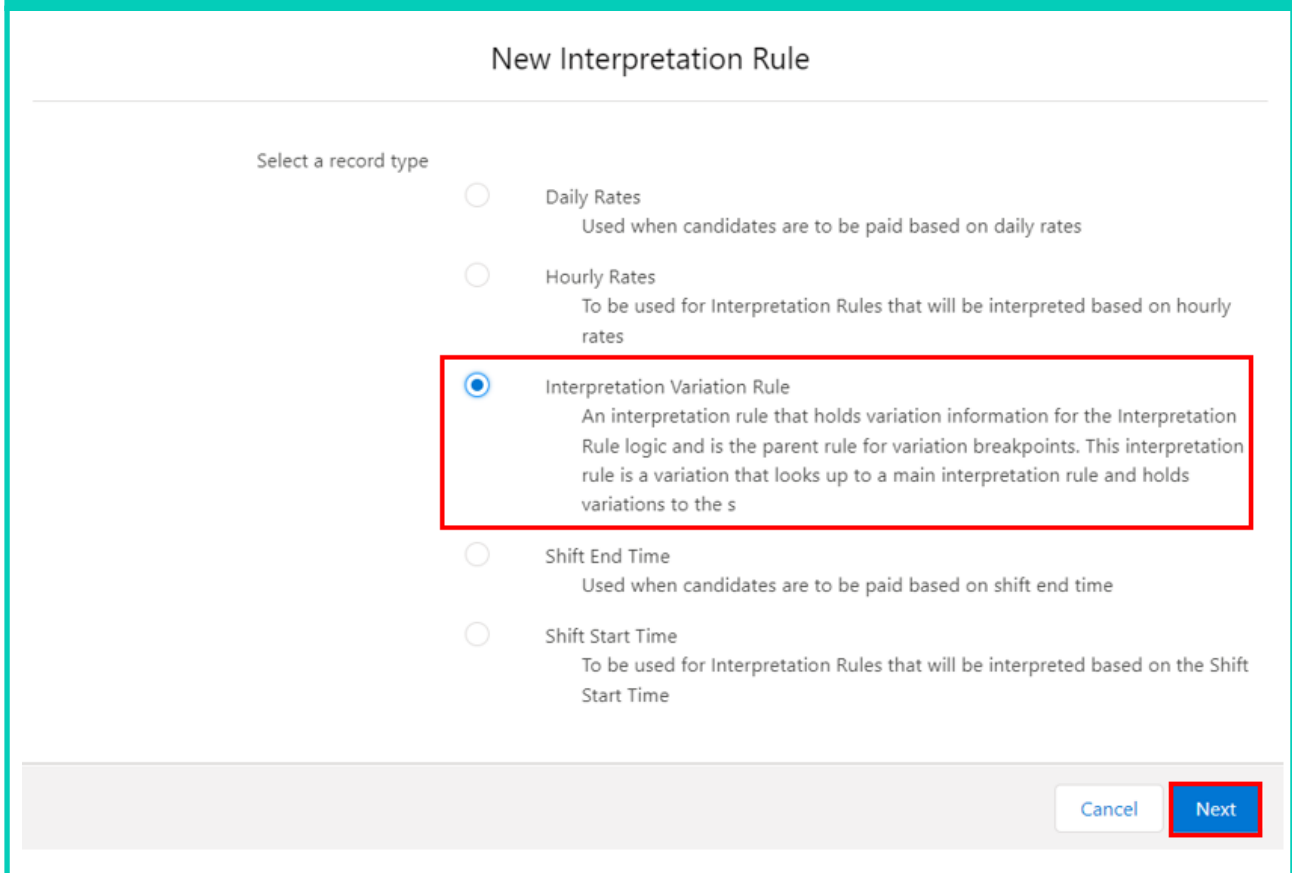

- Click on the **New** button (see Figure 3).

Figure 3

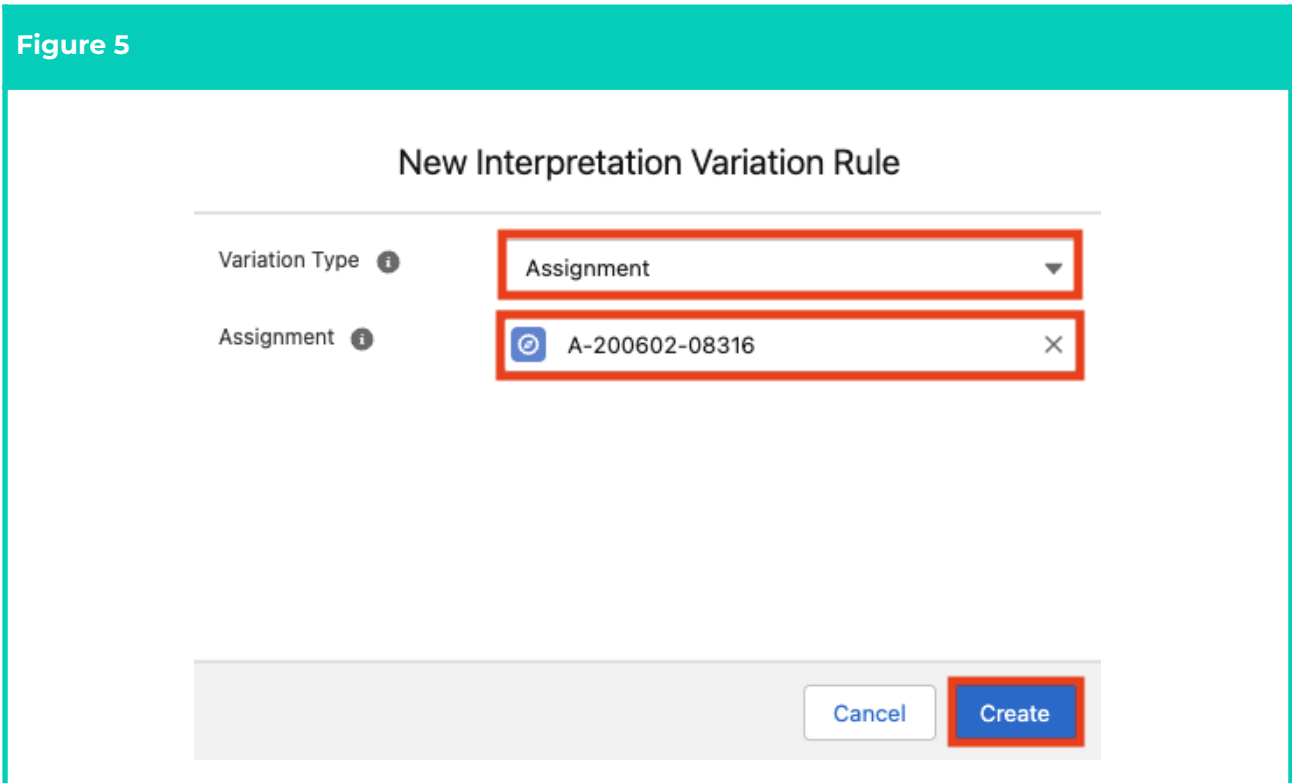

- Select **Interpretation Variation Rule** from the available Interpretation Rules and click on the **Next** button (see Figure 4).

Figure 4

5. Follow this step in the sequence given (see Figure 5):
 - a. To determine the Variation type, select **Assignment** from the available picklist values in the Variation Type field.
 - b. To align the Variation with the Assignment record that it will be related to, populate the **Assignment** field using the lookup options available.
 - c. Click on the **Create** button.

Figure 5

The screenshot shows a form titled "New Interpretation Variation Rule". It has two main input fields: "Variation Type" and "Assignment". The "Variation Type" field is a dropdown menu currently showing "Assignment". The "Assignment" field is a lookup field showing a selected value "A-200602-08316". Both fields are highlighted with red rectangular borders. At the bottom right of the form, there are two buttons: "Cancel" and "Create". The "Create" button is highlighted with a red rectangular border.

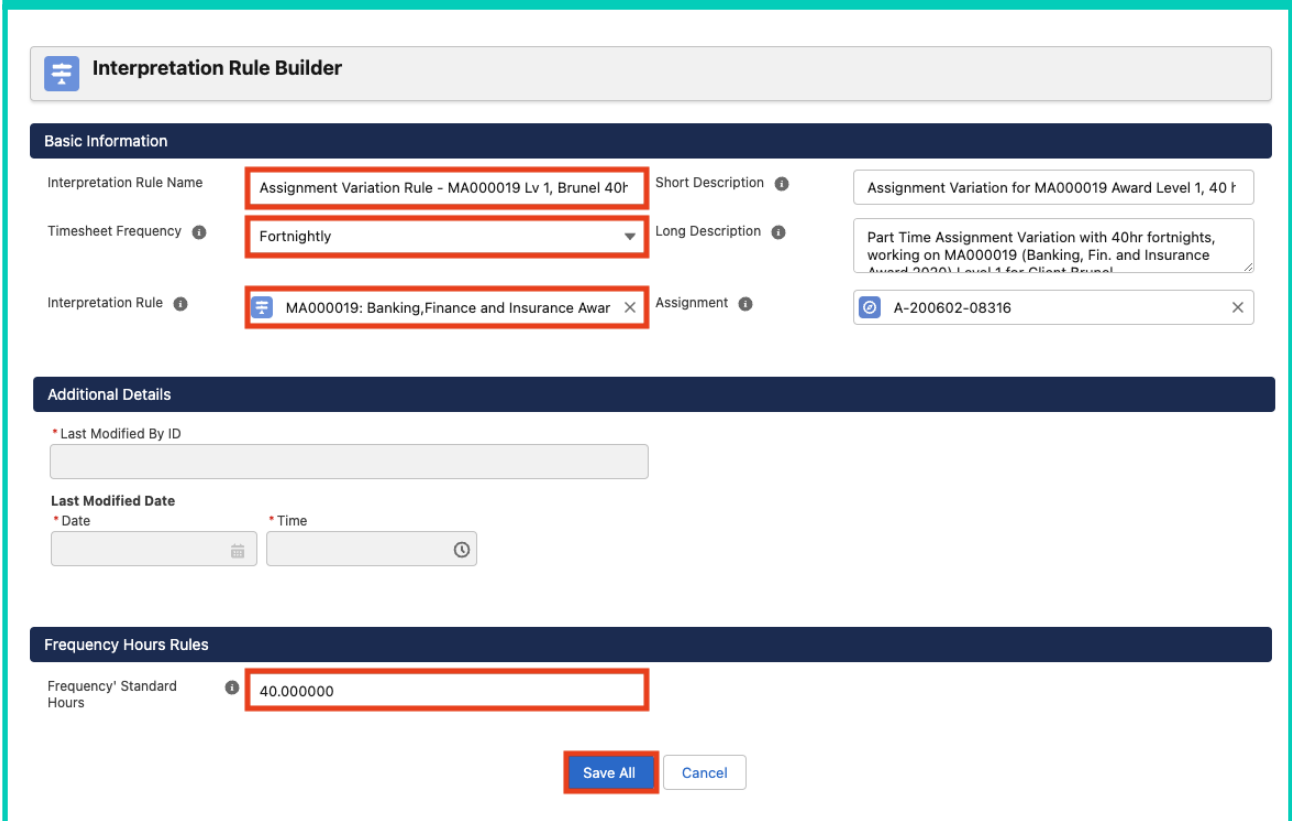

If another Variation Type is required, contact your System Administrator for assistance with creating the new Global Picklist value for the Interpretation Variation Type.

Variations can only be applied during Interpretation when a Timesheet Activity has been populated to indicate that changed work conditions apply for the Time entered. If no Timesheet Activity Project Codes are associated with the Variation Type selected in Step 5., the Variation will not be available for Interpretation. For more information on how to create a Timesheet Activity Project Code associated with a Variation, follow the instructions provided in the Create Timesheet Activity Project Codes QRG.

6. Follow this step in the sequence given (see Figure 6):
 - a. Populate the following required fields to provide the base details of the Variation:
 - i. To create a unique identifier for the Variation, populate the **Interpretation Rule Name** field.
 - ii. To determine the frequency of the Timesheet that applies to the Variation, populate the **Timesheet Frequency** field using the lookup options available.
 - iii. To identify the Interpretation Rule that the Variation will be applied to, populate the **Interpretation Rule** field using the lookup options available.
 - iv. To define the maximum amount of Ordinary Hours payable within the Timesheet Period before overtime must be paid, populate the **Frequency' Standard Hours** field.
 - b. Populate the following optional fields as required:
 - i. To provide a description that can be used to quickly identify the Variation, populate the **Short Description** field.
 - ii. To provide a description that can be used to quickly identify the configuration of the Variation, populate the **Long Description** field.
 - iii. If the Assignment record selected in Step 5b. is incorrect, the **Assignment** field can be re-populated using the lookup options available to select the correct Assignment.
7. Click on the **Save All** button (see Figure 6).

Figure 6

Interpretation Rule Builder

Basic Information

Interpretation Rule Name: Assignment Variation Rule - MA000019 Lv 1, Brunel 40h

Timesheet Frequency: Fortnightly

Interpretation Rule: MA000019: Banking, Finance and Insurance Award

Short Description: Assignment Variation for MA000019 Award Level 1, 40h

Long Description: Part Time Assignment Variation with 40hr fortnights, working on MA000019 (Banking, Fin. and Insurance Award 2020) Level 1 for Client Brunel

Assignment: A-200602-08316

Additional Details

* Last Modified By ID: [Empty]

Last Modified Date: [Date] [Time]

Frequency Hours Rules

Frequency' Standard Hours: 40.000000

Save All **Cancel**

The Timesheet Frequency populated for the Variation **MUST** match the Timesheet Frequency populated for the related Assignment.

The lookup options presented for selection in the Interpretation Rule field will display all Interpretation Rules associated with the Assignment record populated for the Variation.

The fields within the Additional Details section require no input and will be automatically populated once updates and/or changes to the Variation have been saved.

8. Review and confirm the details of the Variation, then click on the **Finalise** button to complete record creation (see Figure 7).

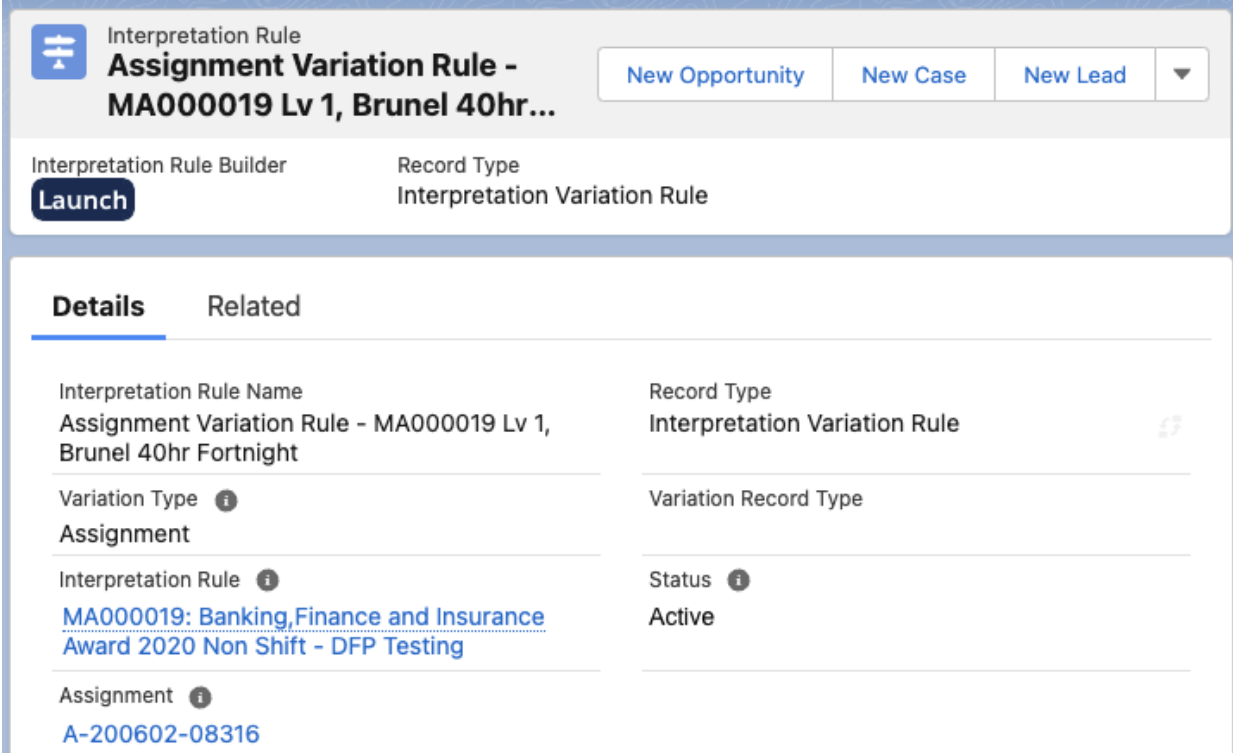

Figure 7

Unlike the process for creating Hourly or Shift Time Interpretation Rules, Frequency Overtime Breakpoints should **NOT** be populated for Variations.

9. A new **Assignment Variation** is now created (see Figure 8).

Figure 8

The screenshot shows the 'Interpretation Rule Builder' interface. At the top, there's a header bar with the title 'Interpretation Rule - Assignment Variation Rule - MA000019 Lv 1, Brunel 40hr...' and buttons for 'New Opportunity', 'New Case', and 'New Lead'. Below the header, there's a 'Launch' button and a 'Record Type' dropdown set to 'Interpretation Variation Rule'. The main content area has two tabs: 'Details' (selected) and 'Related'. Under the 'Details' tab, there are four rows of information: 'Interpretation Rule Name' (Assignment Variation Rule - MA000019 Lv 1, Brunel 40hr Fortnight), 'Record Type' (Interpretation Variation Rule), 'Variation Type' (Assignment), and 'Variation Record Type'. There are also links for 'Interpretation Rule' (MA000019: Banking Finance and Insurance Award 2020 Non Shift - DFP Testing) and 'Assignment' (A-200602-08316).

Once a Variation has been Finalised, it is not recommended to modify further, but instead to facilitate any changes required by creating a new Variation.

Variations CANNOT be deleted if they have been used to process Timesheet Entries to create Pay Transactions. Deleting records is not recommended unless absolutely essential.

10. To modify an existing Variation, open the required record and select the **Launch** button to open the Builder page, then select the **Unfinalise** button available at the bottom of the record.
11. When complete, click on the **Finalise** button.

Field Descriptions

Assignment indicates the Assignment that relates to the Interpretation Rule that the Variation will be applied to.

Frequency' Standard Hours defines the maximum Standard Hours from which Overtime is payable for the remaining hours on the Timesheet (as determined by the Timesheet Frequency).

Interpretation Rule is the related Interpretation Rule that the Variation will be applied to.

Interpretation Rule Name defines the name for the Variation record.

Long Description is the description outlining the Variation's purpose. Users are encouraged to detail here the brief snapshot of how this Variation is configured, to assist with identifying differences between various Interpretation Rules with similar conditions and/or names.

Short Description is the description that can be displayed in lookup search to assist users in selecting the correct Interpretation Rule.

Timesheet Frequency defines the Timesheet Frequency for which the Variation has been set to interpret. The Timesheet Frequency on the Assignment Variation must match the Timesheet Frequency on both the related Interpretation Rule and the Timesheet from the related Assignment. If the Variation does not match the Timesheet Frequency populated for related Timesheets, interpretation will not occur.

Variation Type is the type of Variation record that is selected for creation:

- **24hr Care Shift** is utilised for Variations where Employees have differing standard hours, rates of pay or conditions of work from those outlined in the Interpretation Rule related to a Payee's Assignment.
- **Assignment** is utilised for part-time Employees with differing standard hours from those outlined in the Interpretation Rule related to a Payee's Assignment record.
