

Purpose

The purpose of this quick reference guide is to step through the process of creating an Assignment Level Timesheet Activity Project Code. The intended audience for this document are system administrators / standard users.

Steps

Create an Assignment Level Timesheet Activity Project Code

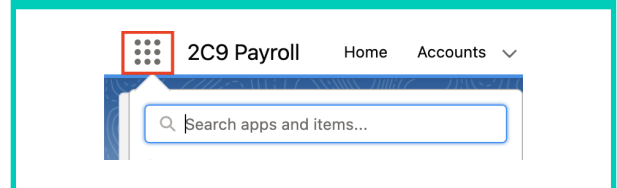

Timesheet Activity Project Codes are used during Interpretation to identify Timesheet Entries associated with certain activities requiring different Interpretation Types to be applied. This allows for different Pay Codes or conditions of work to be associated with the times entered.

Assignment Level Timesheet Activity Project Codes are related to Timesheets at the Assignment Level.

Create an Assignment Level Timesheet Activity Project Code by following the below steps:

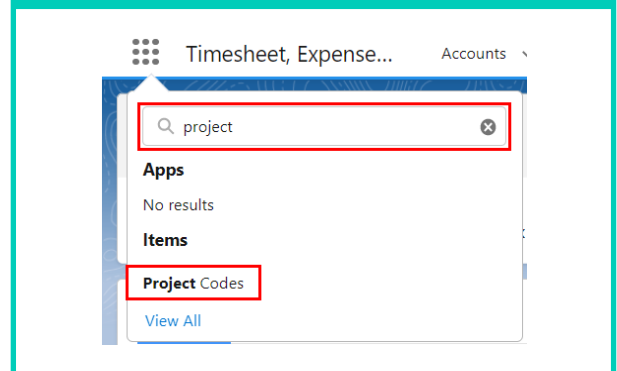

1. Click on the **App Launcher** icon (see Figure 1).

Figure 1

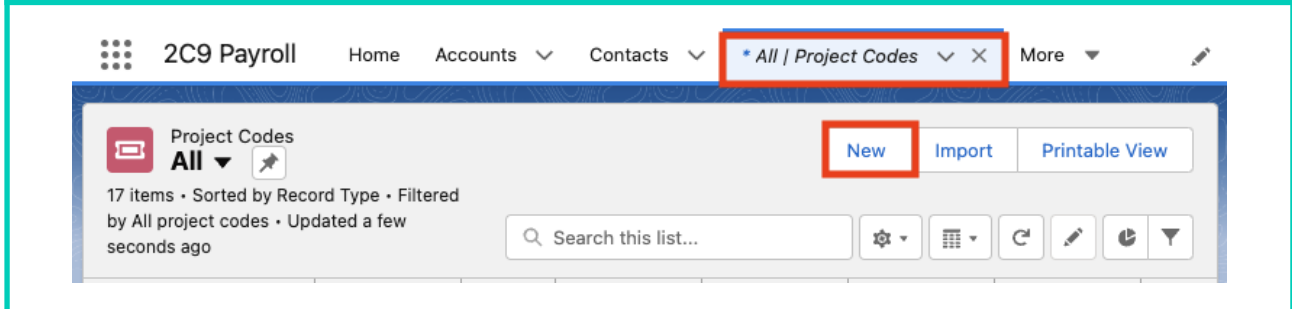

2. Go to the **Project Codes** object by using the Search function (see Figure 2).

Figure 2

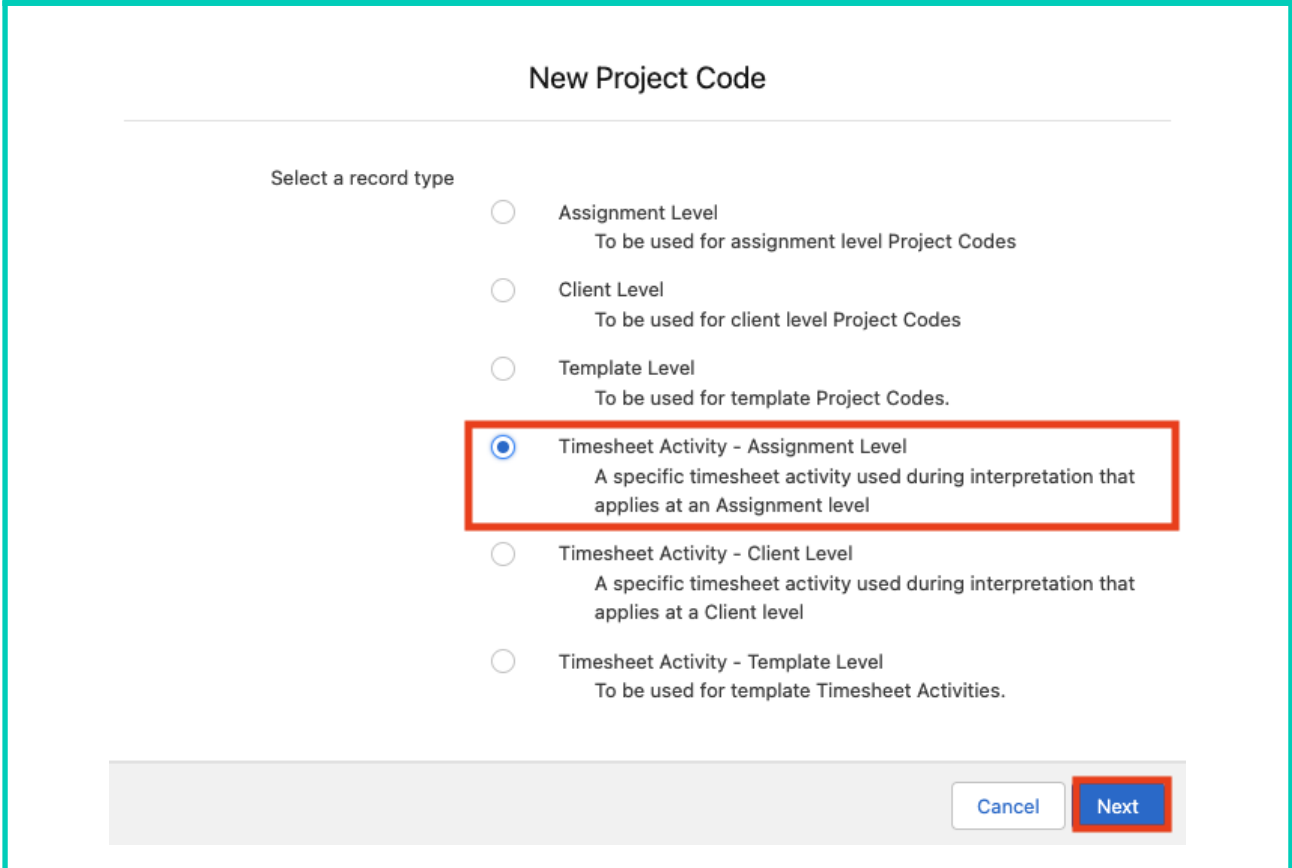

3. Click on the **New** button (see Figure 3).

Figure 3

4. Select **Timesheet Activity - Assignment Level** from the available record types, and click on the **Next** button (see Figure 4).

Figure 4

The screenshot shows the 'New Project Code' form. It has a title 'New Project Code' at the top. Below the title, there's a section 'Select a record type' with several radio button options. The first option is 'Assignment Level' with the description 'To be used for assignment level Project Codes'. The second is 'Client Level' with 'To be used for client level Project Codes'. The third is 'Template Level' with 'To be used for template Project Codes.'. The fourth option, 'Timesheet Activity - Assignment Level', is selected (indicated by a blue dot) and highlighted with a red box. Its description is 'A specific timesheet activity used during interpretation that applies at an Assignment level'. Below this are two more options: 'Timesheet Activity - Client Level' and 'Timesheet Activity - Template Level'. At the bottom right of the form, there are two buttons: 'Cancel' and 'Next'. The 'Next' button is highlighted with a red box.

5. Populate the following required fields to provide the base details of the Project Code (see Figure 5):
 - a. To create a unique identifier for the Project Code, populate the **Project Code Name** field.
 - b. To define the Client record that the Timesheet Activity Project Code should be related to, populate the **Client** field using the lookup options available.
 - c. To define the Assignment record that the Timesheet Activity Project Code should be related to, populate the **Assignment** field using the lookup options available.
 - d. Select from the available picklist options in the **Status** field.
6. If the Timesheet Activity Project Code is related to an Interpretation Type, define the Interpretation Type that should be applied to related Timesheet Entries by selecting from the following picklist values in the Interpretation **Breakpoint Type** field (see Figure 5):
 - a. **Overtime Round Up Shift**
 - b. **Split/Broken Shift**
 - c. **Wake Up**
 - d. **Excursion**
 - e. **Sleepover**
7. If the Timesheet Activity Project Code is related with an Interpretation Variation, populate the following fields (see Figure 5):
 - a. Select **Yes** from the available picklist options in the **Is an Interpretation Variation?** field.
 - b. Select the type of Interpretation Variation that should be applied to related Timesheet Entries by selecting from the available picklist options in the **Variation Type** field.
8. If the Timesheet Activity Project Code is associated with an Allowance Breakpoint, select from the available picklist values in the **Allowance Type** field (see Figure 5).
9. Click on the **Save** button (see Figure 5).

The Timesheet Activity Project Code MUST be populated with either the Interpretation Breakpoint Type field, the Is an Interpretation Variation / Variation Type fields OR the Allowance Type field. These are the fields that define the kind of Interpretation applied to related Timesheet Entries. The Allowance Type field may be populated in conjunction with either the Interpretation Breakpoint Type field or the Interpretation Variation fields, if required for Allowance Junction Breakpoints.

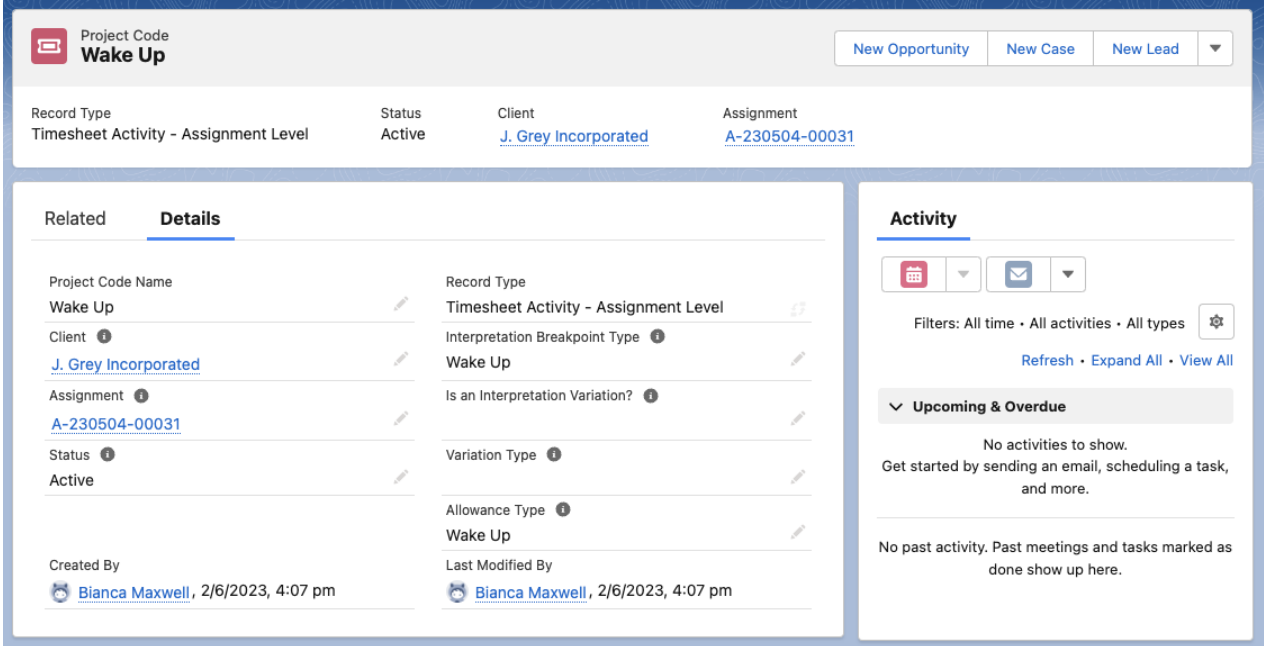

The picklist values available in the Variation Type field will differ, depending on the names given to the custom Variation Types created in an Org. If a required Variation Type is not available, contact the System Administrator for assistance with the creation of a new Global Picklist value for the Interpretation Variation Type.

The picklist values available in the Allowance Type will differ, depending on the requirements of each Org. The value selected here should match the value selected for the Allowance/Timesheet Activity Junction Breakpoint.

10. A new Assignment Level Timesheet Activity Project Code has been created (see Figure 6).

Figure 6

The screenshot displays the 'Project Code' record for 'Wake Up'. The record type is 'Timesheet Activity - Assignment Level', status is 'Active', client is 'J. Grey Incorporated', and assignment is 'A-230504-00031'. The 'Details' tab is active, showing fields for Project Code Name, Client, Assignment, Status, Record Type, Interpretation Breakpoint Type, Is an Interpretation Variation?, Variation Type, Allowance Type, Created By, and Last Modified By. The 'Activity' tab is also visible, showing filters and a list of activities.

Field	Value
Project Code Name	Wake Up
Client	J. Grey Incorporated
Assignment	A-230504-00031
Status	Active
Record Type	Timesheet Activity - Assignment Level
Interpretation Breakpoint Type	Wake Up
Is an Interpretation Variation?	
Variation Type	
Allowance Type	Wake Up

The 'Client Level' and 'Template Level' Timesheet Activity Project Code record types are used for the purposes of automation. For assistance with the creation of either of these record types, contact your system administrator.

Project Codes CAN NOT be deleted if they are used in other records. Deleting records is not recommended unless absolutely essential.

A Project Code record can only be edited if it has not already been referenced within Pay Transactions that are processed in a Pay Batch, or have been Invoiced.

11. To modify an existing Assignment Level Timesheet Activity Project Code record, open the required record and select the **Edit** button available on the top right side of the page. You can also double click in any of the fields that need editing or just click on the pencil icon  that appears within fields when you move your cursor over the field.
12. When complete, click on the **Save** button.

Field Descriptions

Allowance Type defines the type of Allowance Breakpoint that should be applied to Timesheet Entries that have been populated with this Timesheet Activity Project Code.

Assignment is the specific Assignment this Project Code will be applied to.

Client is the specific Client this Project Code will be applied to.

Interpretation Breakpoint Type defines the Interpretation Type that will be applied for Timesheet Entries that have been populated with this Timesheet Activity Project Code.

Is an Interpretation Variation determines that an Interpretation Variation will be applied to Timesheet Entries that have been populated with this Timesheet Activity Project Code.

Project Code Name is the unique identifier for the Timesheet Activity Project Code.

Status is the Status of the Timesheet Activity Project Code.

Variation Type defines the type of Variation that will be applied to Timesheet Entries that have been populated with this Timesheet Activity Project Code.
