

Purpose

The purpose of this quick reference guide is to step through the process of creating a custom Variation for an Interpretation Rule. The intended audience for this document are system administrators / standard users.

Steps

Populate a new Custom Interpretation Variation Rule

The custom Variation allows new Breakpoints to be created in order to define the conditions that should be applied when a particular Timesheet Activity is populated within a Timesheet Entry during Interpretation. This enables Timesheet Interpretation to occur according to the conditions defined in the Variation, instead of the Interpretation Rule.

When creating a custom Variation, most of the fields presented in the Interpretation Rule Builder will be the same as those in an Hourly, Shift Start or Shift End Interpretation Rule. However, only certain fields need to be populated in order to finalise the Variation. Weekday Rules, Weekend Rules, Public Holiday Rules, Frequency Hours Rules (for Frequency Standard Hours) and Pay Code Caps must all be completed before the Variation can be finalised. However, the data populated within Frequency Hours Breakpoints will be defaulted according to the data in the base Interpretation Rule, and is only required so that the Builder page is populated with the minimum data requirements necessary to create Breakpoints.

There are other fields throughout the record which may be populated to override the values defined in the base Interpretation Rule, but which only need to be completed if they relate to the changed work conditions captured by the Variation.

Create a custom Variation by following the below steps:

1. Click on the **App Launcher** icon (see Figure 1).
2. Go to the **Interpretation Rule** object by using the Search function (see Figure 2).

Figure 1

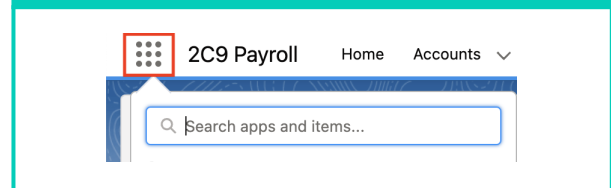

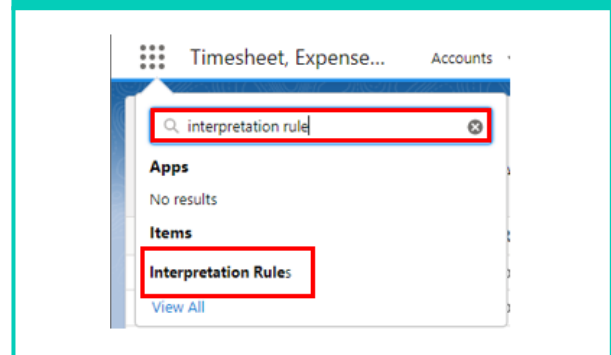

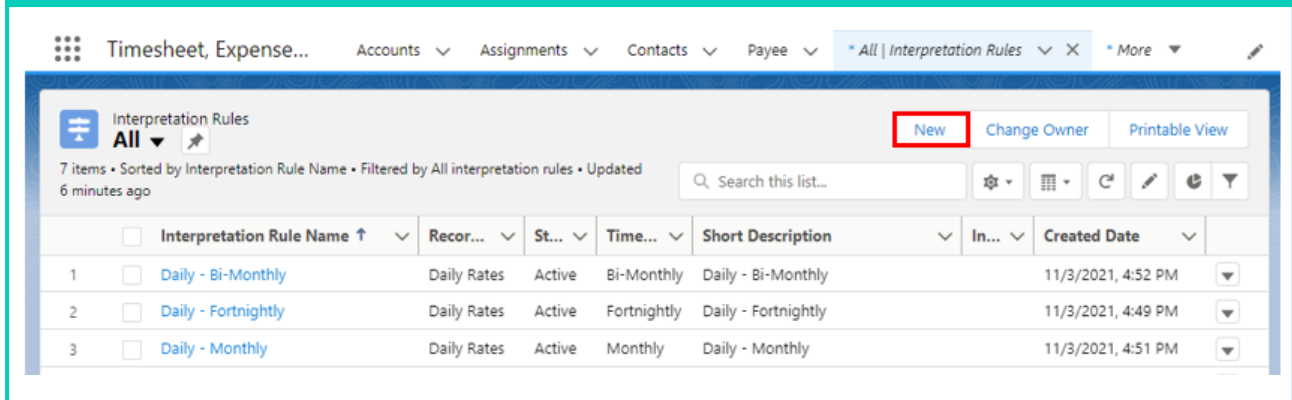

Figure 2

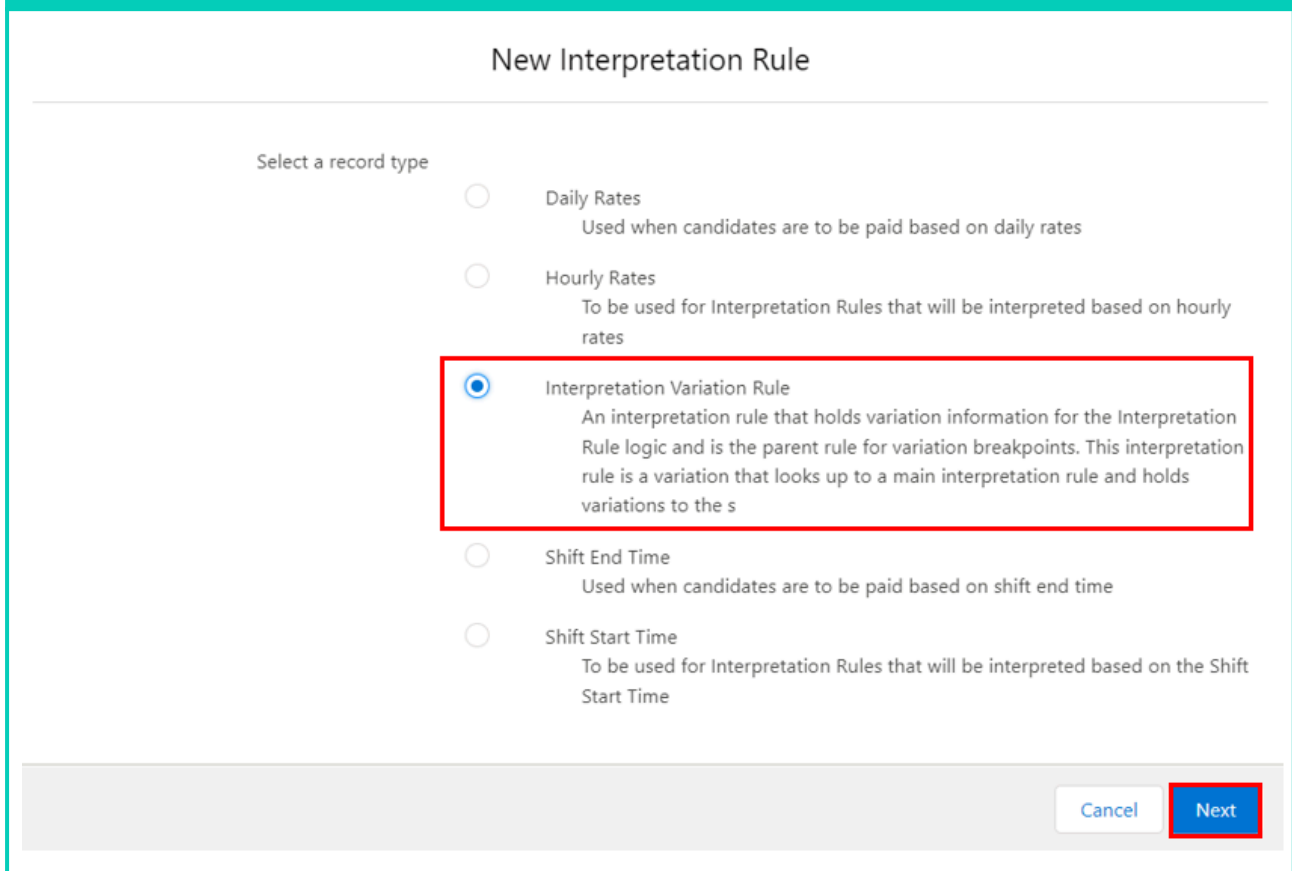

- Click on the **New** button (see Figure 3).

Figure 3

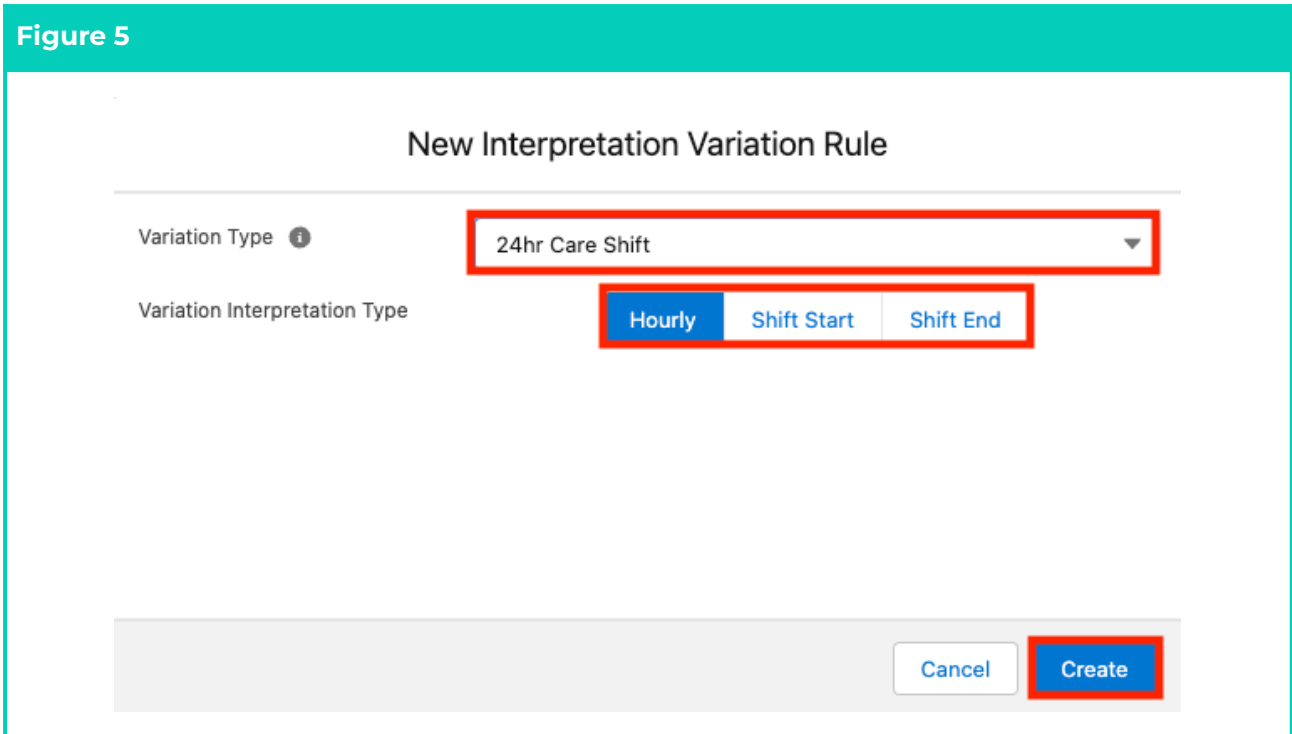

- Select **Interpretation Variation Rule** from the available Interpretation Rules and click on the **Next** button (see Figure 4).

Figure 4

5. Follow this step in the sequence given (see Figure 5):
 - a. To determine the Variation type, select one of the custom Variation options from the available picklist values in the **Variation Type** field.
 - b. To align the Variation with the Interpretation record type that it relates to, select from the options in the **Variation Interpretation Type** field.
 - i. **Hourly**
 - ii. **Shift Start**
 - iii. **Shift End**
 - c. Click on the **Create** button.

Figure 5

The screenshot shows a form titled "New Interpretation Variation Rule". It has two main sections. The first section, "Variation Type", contains a dropdown menu with "24hr Care Shift" selected. The second section, "Variation Interpretation Type", contains three buttons: "Hourly", "Shift Start", and "Shift End". At the bottom right of the form are two buttons: "Cancel" and "Create". Red boxes highlight the "24hr Care Shift" dropdown, the "Hourly", "Shift Start", and "Shift End" buttons, and the "Create" button.

The options available in the Variation Type field will differ, depending on the names assigned to Custom Variation Types. This example has '24hr Care Shift' as the Custom Variation Type. To create a Variation Type, contact the System Administrator to request a new Global Picklist value for the Variation Type field.

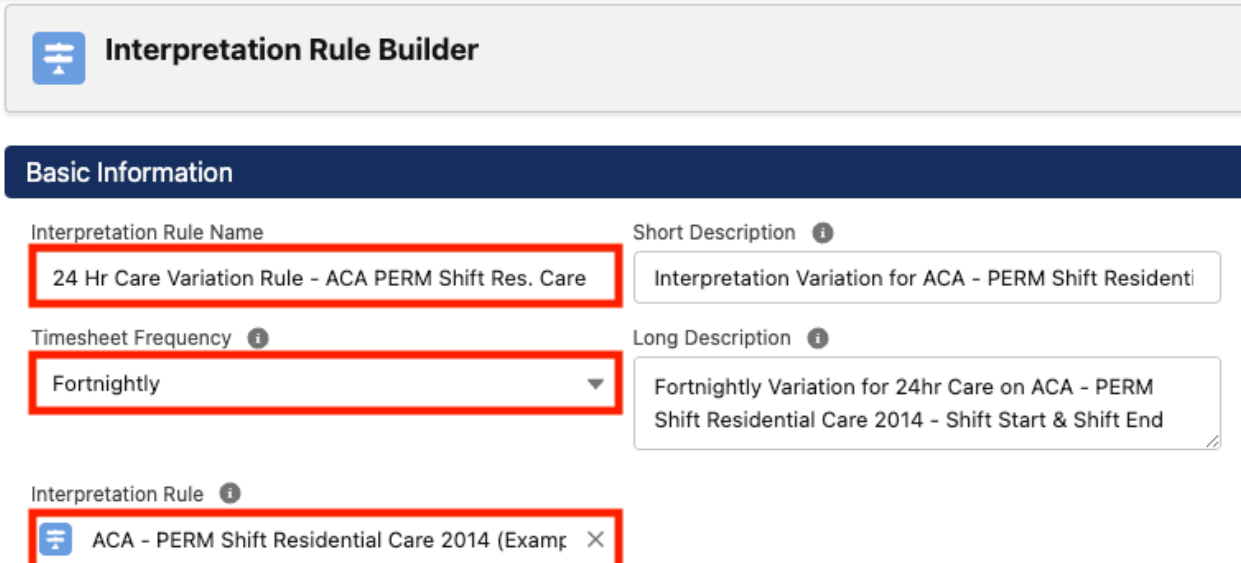

The Variation Interpretation Type **MUST** match the record type of the base Interpretation Rule.

Variations are only applied when the associated Timesheet Activity is populated on Timesheets. For more information on how to create a Timesheet Activity Project Code, follow the instructions provided in the Create Project Codes - Timesheet Activity (Assignment Level) QRG.

6. Follow this step in the sequence given (see Figure 6):
 - a. Populate the following required fields to provide the base details of the Variation:
 - i. **Interpretation Rule Name**
 - ii. **Timesheet Frequency**
 - iii. To identify the Interpretation Rule that the Variation will be related to, populate the **Interpretation Rule** field using the lookup options available.
 - b. Populate the following optional fields as needed:
 - i. To provide a description to identify the Variation, populate the **Short Description** field.
 - ii. To provide a description to identify the configuration of the Variation, populate the **Long Description** field.

Figure 6

Interpretation Rule Builder

Basic Information

Interpretation Rule Name
24 Hr Care Variation Rule - ACA PERM Shift Res. Care

Short Description ⓘ
Interpretation Variation for ACA - PERM Shift Residenti

Timesheet Frequency ⓘ
Fortnightly ▼

Long Description ⓘ
Fortnightly Variation for 24hr Care on ACA - PERM Shift Residential Care 2014 - Shift Start & Shift End

Interpretation Rule ⓘ
ACA - PERM Shift Residential Care 2014 (Example) X

The Timesheet Frequency populated for the Variation **MUST** match the Timesheet Frequency populated for the related Interpretation Rule.

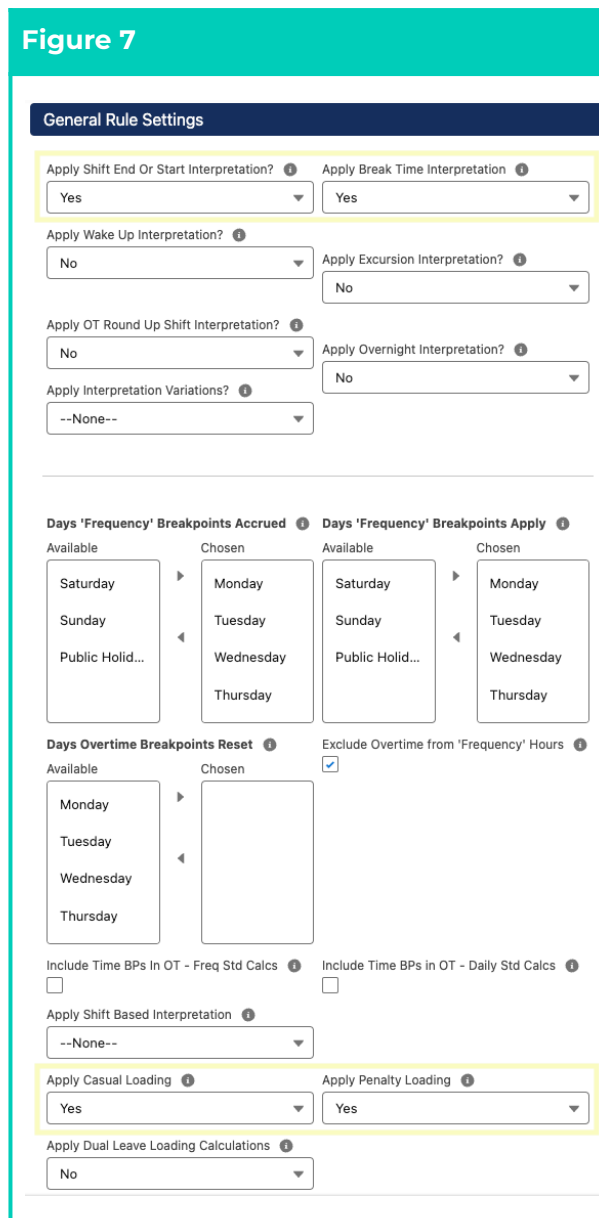

Interpretation Rule Builder - Populate Interpretation Variation (Custom)

General Rule Settings

Although this section of the Interpretation Rule Builder presents all the same fields as an Hourly, Shift Start or Shift End Interpretation Rule, only some of the fields may be used to override the values populated on the base Interpretation Rule. These fields are outlined below.

7. Populate the following fields as needed for the conditions of the Variation (see Figure 7):
 - a. If Shift Start or Shift End was selected as the Variation Interpretation Type, the **Apply Shift End or Shift Start Interpretation** field may be populated, to cater to conditions such as paying night shift for all shifts ending before 8am or starting before 6am.
 - b. To ensure Break Time Interpretation is applied to all relevant Breakpoint types for this Variation, select **Yes** from the available picklist options for the **Apply Break Time Interpretation** field.
 - c. If separate Pay Transactions should be created when Casual Loading Pay Codes apply to this Variation, select **Yes** from the available picklist options in the **Apply Casual Loading** field.
 - d. If Pay Transactions should be created when Penalty Loading Pay Codes apply to this Variation, select **Yes** from the available picklist options in the **Apply Penalty Loading** field.

Figure 7

Variations are not designed to be used to update existing Interpretation Rules. They exist only to facilitate circumstances where a Timesheet Activity Project Code indicates a different set of work conditions apply for Timesheet Interpretation. If changes to base Interpretation Rules are required, a new Interpretation Rule must be created to facilitate this.

8. Break Loading and Minimum Rest Rules should not be populated for Variations, as values will be derived from the base Interpretation Rule.
9. Split/Broken Shift and Sleepover Rules should not be populated for Variations, as values will be derived from the base Interpretation Rule.

Weekday (Monday to Friday) Rules

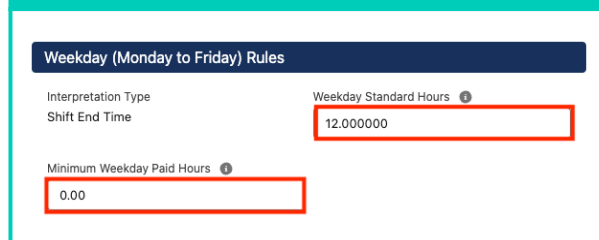

All fields must be populated here to define the Weekday conditions and associated Breakpoints for the Variation. Available fields and Breakpoints will vary, depending on the Variation Interpretation Type selected, and also depending on whether Apply Shift End or Shift Start Interpretation is enabled.

10. For Shift Start and Shift End Variations, populate the following required fields (see Figure 8):

- To define the maximum Ordinary hours that may be paid within a single day before Overtime Pay Codes from the related Interpretation Rule will be applied, populate the **Weekday Standard Hours** field.

- To define the minimum amount of hours that are payable each Weekday, regardless of the actual hours entered within Timesheet Entries, populate the **Minimum Weekday Paid Hours** field.

Figure 8

Weekday (Monday to Friday) Rules

Interpretation Type: Shift End Time

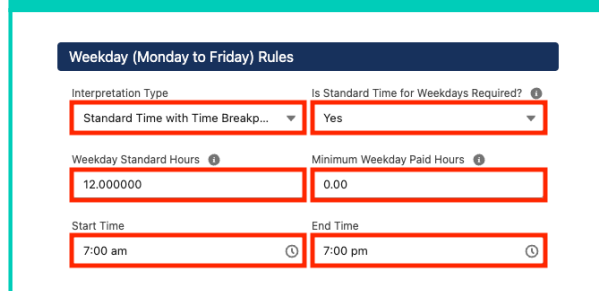

Weekday Standard Hours: 12.000000

Minimum Weekday Paid Hours: 0.00

11. For Hourly Variations, populate the following required fields (see Figure 9):

- To determine whether Interpretation reviews Timesheet Entries according to the amount of time entered within a 24 hour period, or the time of day entered, select from the available picklist options in the **Interpretation Type** field:

Figure 9

Weekday (Monday to Friday) Rules

Interpretation Type: Standard Time with Time Break...

Is Standard Time for Weekdays Required?: Yes

Weekday Standard Hours: 12.000000

Minimum Weekday Paid Hours: 0.00

Start Time: 7:00 am

End Time: 7:00 pm

- Standard Time with Time Breakpoints** - Breakpoints allow Pay Codes to be defined according to the amount of hours entered over a 24 hour period.
 - Standard Time with Time of Day Breakpoints** - Breakpoints allow Pay Codes to be defined according to the time of day entries occur over a 24 hour period.
- If Ordinary hours occur on Weekdays, select **Yes** from the available picklist options in the **Is Standard Time for Weekdays Required?** field.
 - If **No**, Overtime will be applied to any Timesheet Entries completed for Weekdays.
 - To define the maximum hours payable for ordinary time Pay Codes in a single shift (if Shift Logic is applied) or day (if Daily Logic is applied) before Overtime Pay Codes will be applied, populate the **Weekday Standard Hours** field.
 - To define the minimum hours payable each Weekday, regardless of actual hours populated for Timesheet Entries, populate the **Minimum Weekday Paid Hours** field.
 - If Standard Time with Time Breakpoints was selected as the Interpretation Type, populate the **Start Time** and **End Time** fields to define when Pay Codes associated with ordinary time should apply for Weekdays.

Saturday Rules

12. Follow the instructions in Weekday (Monday to Friday) Rules to complete Saturday Rules.

Sunday Rules

13. Follow the instructions in Weekday (Monday to Friday) Rules to complete Sunday Rules.

Public Holiday Rules

14. Follow the instructions in Weekday (Monday to Friday) Rules to complete Public Holiday Rules.

Required fields **MUST** be populated for Weekday, Saturday, Sunday and Public Holiday Rules, regardless of whether Variations are associated with these days.

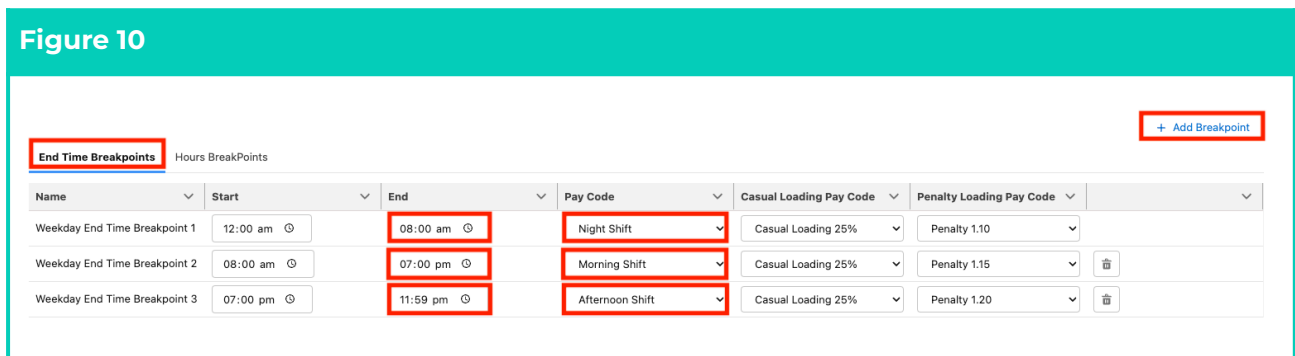

Shift Start or Shift End Breakpoints

For Variations using Shift Start or Shift End Variation Interpretation Type, 24 hours of EITHER Shift Start or Shift End Breakpoints are mandatory for Weekday Rules, unless Apply Shift End or Start Interpretation is enabled from General Rule Settings.

The same applies for Saturday, Sunday and Public Holiday Rules, unless a different kind of Breakpoint is selected from the Interpretation Type field.

15. Follow this step to populate End Time or Start Time Breakpoints (see Figure 10):
 - a. Click on the **Start Time** or **End Time Breakpoints** tab.
 - b. As the **Start** field defaults to 12:00 am, and does not need to be populated, define the first Variation Breakpoint that occurs during Weekdays from 12:00 am by populating the **End** field.
 - c. Define the Pay Code for the first Variation Breakpoint by populating the **Pay Code** field using the lookup options available.
 - d. If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
 - e. If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
 - f. To add the next Variation Breakpoint, click on the **+ Add Breakpoint** button.
 - i. A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
 - g. Populate the **End** and **Pay Code** fields within the new Breakpoint to define the next Weekday Shift End Time Breakpoint.
 - h. To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.
16. Repeat Step 15. until 24 hours of Start Time or End Time Breakpoints have been populated.

Figure 10

Name	Start	End	Pay Code	Casual Loading Pay Code	Penalty Loading Pay Code
Weekday End Time Breakpoint 1	12:00 am	08:00 am	Night Shift	Casual Loading 25%	Penalty 1.10
Weekday End Time Breakpoint 2	08:00 am	07:00 pm	Morning Shift	Casual Loading 25%	Penalty 1.15
Weekday End Time Breakpoint 3	07:00 pm	11:59 pm	Afternoon Shift	Casual Loading 25%	Penalty 1.20

The Breakpoints populated for Variations **MUST** account for a full 24 hours, including Overtime hours, before the record can be saved. Variation Breakpoints will override Breakpoints defined in the related Interpretation Rule.

Shift End and Shift Start Breakpoints

For Start Time and End Time Variations with **Apply Shift End or Start Interpretation** enabled in General Rule Settings,, the required Breakpoints for Weekday Rules may be populated using either Shift End Breakpoints, Shift Start Breakpoints, or a combination of both.

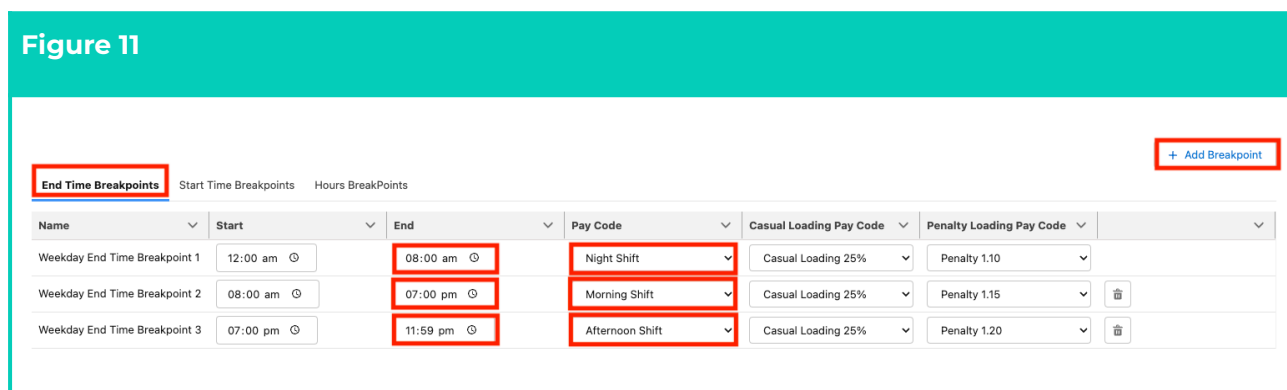

The same applies for Saturday, Sunday and Public Holiday Rules, unless a different kind of Breakpoint is selected from the Interpretation Type field.

17. Follow this step to populate End Time and Start Time Breakpoints (see Figure 11):

- a. Click on the **End Time** Breakpoints tab.
 - i. If End Time is being used as the primary Breakpoint type for Variation Weekday Rules, populate the first End Time Breakpoint that occurs during Weekdays from 12:00 am by populating the **End** field.
 - ii. If End Time is being used as the secondary Breakpoint type for Variation Weekday Rules, define the first Breakpoint for End Time Interpretation by populating the **Start** and **End** field using 24 hour format.
- b. To define the Pay Code for the first Shift End Time Breakpoint, populate the **Pay Code** field using the lookup options available.
- c. If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
- d. If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
- e. To add the next End Time Breakpoint, click on the **+ Add Breakpoint** button.
 - i. A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
- f. Populate the **End** and **Pay Code** fields within the new Breakpoint to define the next Weekday Shift End Time Breakpoint.
- g. To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.

18. Repeat Step 17. until all necessary End Time Breakpoints have been populated.

Figure 11

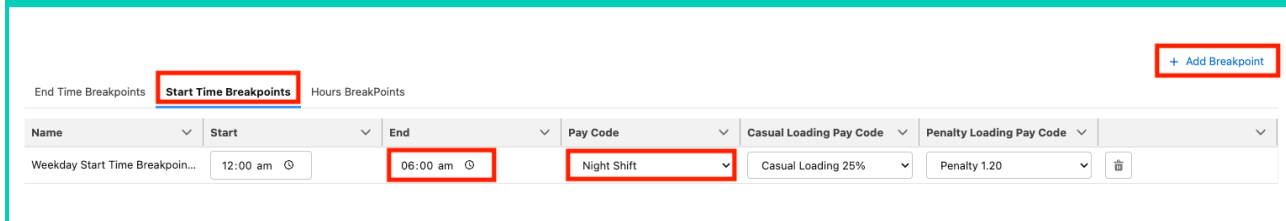

Name	Start	End	Pay Code	Casual Loading Pay Code	Penalty Loading Pay Code
Weekday End Time Breakpoint 1	12:00 am	08:00 am	Night Shift	Casual Loading 25%	Penalty 1.10
Weekday End Time Breakpoint 2	08:00 am	07:00 pm	Morning Shift	Casual Loading 25%	Penalty 1.15
Weekday End Time Breakpoint 3	07:00 pm	11:59 pm	Afternoon Shift	Casual Loading 25%	Penalty 1.20

The Breakpoints populated for Variations **MUST** account for a full 24 hours, including Overtime hours, before the record can be saved. Variation Breakpoints will override Breakpoints defined in the related Interpretation Rule.

19. To define the Start Time Breakpoints, populate the following required fields (see Figure 12):
 - a. Click on the **Start Time** Breakpoints tab.
 - i. If Start Time is being used as the primary Breakpoint type for Variation Weekday Rules, populate the first Start Time Breakpoint that occurs during Weekdays from 12:00 am by populating the **End** field.
 - ii. If Start Time is being used as the secondary Breakpoint type for Variation Weekday Rules, define the first Breakpoint for Start Time Interpretation by populating the **Start** and **End** field using 24 hour format.
 - b. To define the Pay Code for the first Shift Start Time Breakpoint, populate the **Pay Code** field using the lookup options available.
 - c. If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
 - d. If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
 - e. To add the next Start Time Breakpoint, click on the **+ Add Breakpoint** button.
 - i. A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
 - f. Populate the **End** and **Pay Code** fields within the new Breakpoint to define the next Weekday Shift Start Time Breakpoint.
 - g. To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.
20. Repeat Step 19. until all necessary End Time Breakpoints have been populated.

Figure 12

End Time Breakpoints **Start Time Breakpoints** Hours BreakPoints + Add Breakpoint

Name	Start	End	Pay Code	Casual Loading Pay Code	Penalty Loading Pay Code	
Weekday Start Time Breakpoint...	12:00 am	06:00 am	Night Shift	Casual Loading 25%	Penalty 1.20	

The Breakpoints populated for Variations **MUST** account for a full 24 hours, including Overtime hours, before the record can be saved. Variation Breakpoints will override Breakpoints defined in the related Interpretation Rule.

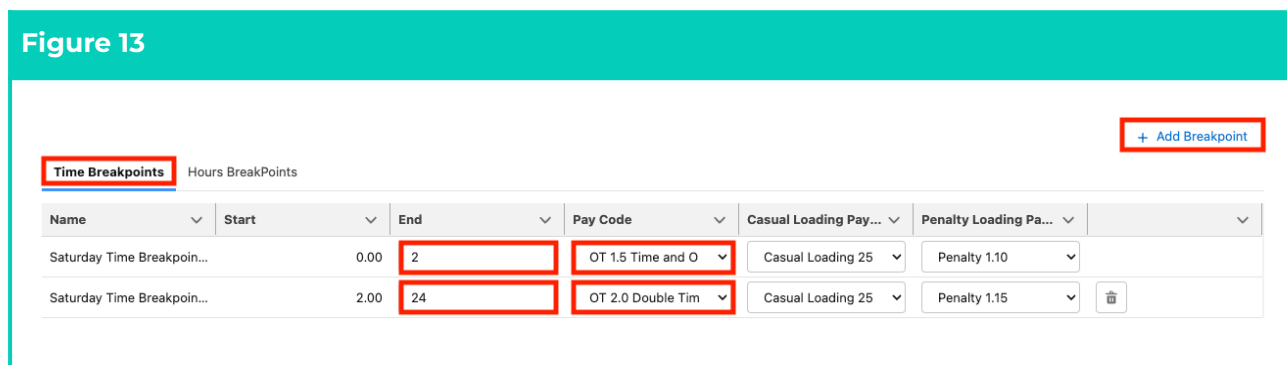

Time Breakpoints

For Hourly Variations, these Breakpoints are required when Standard Time with Time Breakpoints is selected as the Interpretation Type for Weekday, Saturday, Sunday or Public Holiday Rules.

For Start Time or End Time Variations, Standard Time with Time Breakpoints may only be selected as the Interpretation Type for Saturday, Sunday and Public Holiday Rules (i.e. NOT for Weekdays, where Shift Start and/or Shift End Breakpoints are mandatory).

21. Follow this step to populate Time Breakpoints (see Figure 13):
 - a. Click on the **Time Breakpoints** tab.
 - b. As the **Start** field defaults to 0, and does not need to be populated, define the first Standard Time with Time Breakpoint that occurs for the Variation outside of Weekday ordinary time by populating the **End** field.
 - i. Weekday ordinary hours for Standard Time with Time Breakpoints are determined by the values in the Start Time and End Time fields for Weekday Rules.
 - c. To define the Pay Code for the first Time Breakpoint, populate the **Pay Code** field.
 - d. If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
 - e. If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
 - f. To add the next Time Breakpoint, click on the **+ Add Breakpoint** button.
 - i. A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
 - g. Populate the **End** and **Pay Code** fields within the new Breakpoint to define the next Weekday Time Breakpoint.
 - h. To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.
22. Repeat Step 21. until 24 hours of Time Breakpoints have been accounted for.

Figure 13

Time Breakpoints Hours BreakPoints

[+ Add Breakpoint](#)

Name	Start	End	Pay Code	Casual Loading Pay...	Penalty Loading Pa...
Saturday Time Breakpoint...	0.00	2	OT 1.5 Time and O	Casual Loading 25	Penalty 1.10
Saturday Time Breakpoint...	2.00	24	OT 2.0 Double Tim	Casual Loading 25	Penalty 1.15

The Breakpoints populated for Variations **MUST** account for a full 24 hours, including Overtime hours, before the record can be saved. Variation Breakpoints will override Breakpoints defined in the related Interpretation Rule.

Time of Day Breakpoints

For Hourly Variations, these Breakpoints are required when Standard Time with Time of Day Breakpoints is selected as the Interpretation Type for Weekday, Saturday, Sunday or Public Holiday Rules.

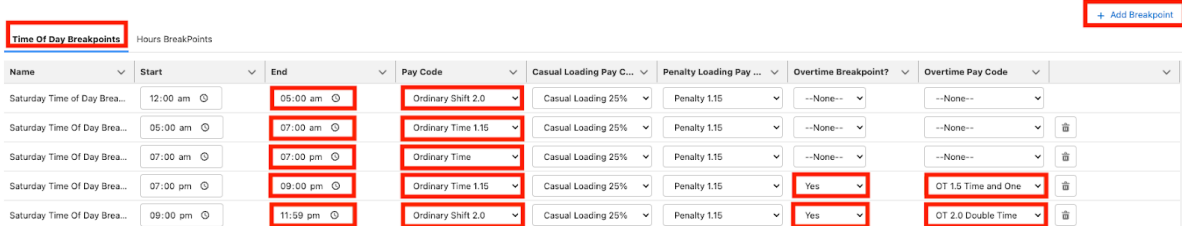

For Start Time or End Time Variations, Standard Time with Time of Day Breakpoints may only be selected as the Interpretation Type for Saturday, Sunday and Public Holiday Rules (i.e. NOT for Weekdays, where Shift Start and/or Shift End Breakpoints are mandatory).

23. Follow this step to populate Time of Day Breakpoints (see Figure 14):

- Click on the **Time of Day Breakpoints** tab.
- As the **Start** field defaults to 12:00 am, and does not need to be populated, define the first Time of Day Breakpoint that occurs for the Variation during Weekdays from 12:00 am by populating the **End** field.
- To define the Pay Code for the first Time of Day Breakpoint, populate the **Pay Code** field using the lookup options available.
 - If the Breakpoint relates to Overtime, select **Yes** in the **Overtime Breakpoint** field and populate the **Overtime Pay Code** field instead of the Pay Code field.
- If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
- If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
- To add the next Time of Day Breakpoint, click on the **+ Add Breakpoint** button.
 - A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
- Populate the **End** and **Pay Code/Overtime Pay Code** fields within the new Breakpoint to define the next Weekday Time of Day Breakpoint.
- To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.

24. Repeat Step 23. until 24 hours of Time of Day Breakpoints have been accounted for.

Figure 14

Name	Start	End	Pay Code	Casual Loading Pay C...	Penalty Loading Pay ...	Overtime Breakpoint?	Overtime Pay Code
Saturday Time of Day Brea...	12:00 am	05:00 am	Ordinary Shift 2.0	Casual Loading 25%	Penalty 1.15	--None--	--None--
Saturday Time of Day Brea...	05:00 am	07:00 am	Ordinary Time 1.15	Casual Loading 25%	Penalty 1.15	--None--	--None--
Saturday Time of Day Brea...	07:00 am	07:00 pm	Ordinary Time	Casual Loading 25%	Penalty 1.15	--None--	--None--
Saturday Time of Day Brea...	07:00 pm	09:00 pm	Ordinary Time 1.15	Casual Loading 25%	Penalty 1.15	Yes	OT 1.5 Time and One
Saturday Time of Day Brea...	09:00 pm	11:59 pm	Ordinary Shift 2.0	Casual Loading 25%	Penalty 1.15	Yes	OT 2.0 Double Time

The Breakpoints populated for Variations **MUST** account for a full 24 hours, including Overtime hours, before the record can be saved. Variation Breakpoints will override Breakpoints defined in the related Interpretation Rule.

Hours Breakpoints

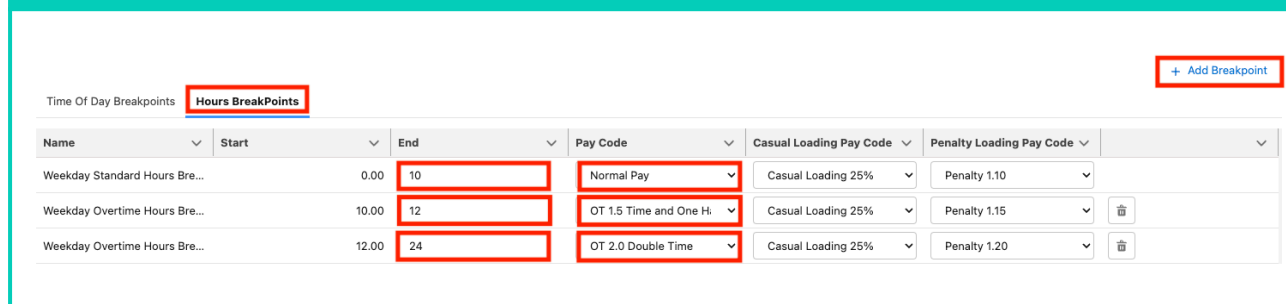

These Breakpoints are mandatory for all Hourly, Shift Start and Shift End Variations. A full 24 hours of Hours Breakpoints must be populated in Weekday, Saturday, Sunday and Public Holiday Rules, and every Breakpoint after the first will represent Overtime.

25. Follow this step to populate Hours Breakpoints (see Figure 15):

- Click on the **Hours Breakpoints** tab.
- As the **Start** field defaults to 0, and does not need to be populated, define the hours associated with ordinary time Pay Codes for the Variation by populating the **End** field.
 - Users must remember that Hours Breakpoints will be overridden by Time Breakpoints, so this amount is the defined maximum payable with ordinary time Pay Codes.
- To define the Pay Code for the ordinary time Breakpoint, populate the **Pay Code** field using the lookup options available.
- If Casual Loading applies to the Variation, populate the **Casual Loading Pay Code** field using the lookup options available.
- If Penalty Loading applies to the Variation, populate the **Penalty Loading Pay Code** field using the lookup options available.
- To add the first Overtime Hours Breakpoint, click on the **+ Add Breakpoint** button.
 - A new Breakpoint line will be added beneath the first, with the **Start** field defaulting to the value from the previous **End** field.
- Populate the **End** and **Pay Code** fields within the new Breakpoint to define the first Overtime Hours Breakpoint.
- To remove a Breakpoint, click on the **Trash Can** icon next to the corresponding line.

26. Repeat Step 25. until a full 24 hours of Hours Breakpoints have been accounted for.

Figure 15

Name	Start	End	Pay Code	Casual Loading Pay Code	Penalty Loading Pay Code	
Weekday Standard Hours Bre...	0.00	10	Normal Pay	Casual Loading 25%	Penalty 1.10	
Weekday Overtime Hours Bre...	10.00	12	OT 1.5 Time and One H...	Casual Loading 25%	Penalty 1.15	🗑
Weekday Overtime Hours Bre...	12.00	24	OT 2.0 Double Time	Casual Loading 25%	Penalty 1.20	🗑

27. Complete Breakpoints for Saturday, Sunday and Public Holiday Rules according to the instructions for the applicable Breakpoints.

Weekdays, Saturdays, Sundays and Public Holidays must be ALL populated to cover 24 hours (i.e. 12:00 AM - 11:59 PM) of either Start Time, End Time or Time Breakpoints, as well as Hours Breakpoints. Without these details, Interpretation will not be able to determine the appropriate Pay Codes for Timesheet Entries related to the Variation.

Frequency Hours Rules

28. Follow this step to populate Frequency Hours Rules for the Variation (see Figure 16):
- To define the maximum amount of Ordinary Hours payable within the Timesheet Period before overtime must be paid, populate the **Frequency' Standard Hours** field.

Figure 16

The screenshot shows a form titled 'Frequency Hours Rules'. Below the title, there is a label 'Frequency' Standard Hours' followed by an information icon (i) and a text input field. The input field contains the value '20.000000' and is highlighted with a red rectangular border.

29. Allowance Rules should not be populated for Variations, as Breakpoints from the base Interpretation Rule will be applied for Allowances.
30. Allowance Junction Rules should not be populated for Variations, as Breakpoints from the base Interpretation Rule will be applied for Allowance Junctions.
- If the Interpretation needs to consider an Allowance/Timesheet Activity Junction Breakpoint in relation to a Variation, follow the instructions provided in the Populate Allowance, Leave & Allowance Junction Rule Breakpoints QRG when setting up the base Interpretation Rule.
31. If the conditions of the Variation require altered Leave Rule Interpretation for associated Timesheet Entries, Leave Breakpoints may be populated to override the base Interpretation Rule.
- Follow the instructions provided in the Populate Allowance, Leave & Allowance Junction Rule Breakpoints QRG to complete this section of the Variation.
32. To complete Frequency Breakpoints and finalise Variation creation, follow the instructions provided in the Create Breakpoints & Pay Code Caps QRG.

To relate an Allowance/Timesheet Activity Breakpoint to a custom Variation, ensure that the Variation Type populated in the Timesheet Activity Project Code associated with the Breakpoint is the same as the Variation Type selected for the custom Variation record.

The Interpretation Rule cannot be saved or finalised until Breakpoint & Pay Code Cap creation has been completed.

Frequency Standard Hours (including Overtime Hours) must be created for the Variation before the record may be Finalised. However, the data populated within these sections will be overridden by the base Interpretation Rule. If changes to these fields are required, a new Interpretation Rule should be created to facilitate them.

Field Descriptions

Field Name	Description
Apply Break Time Interpretation	Indicates whether the Variation will apply Break Time logic to the before, after, standard and overtime interpretation.
Apply Casual Loading	Indicates the requirement for a separate Pay Code for Casual Loading to be applied during Interpretation and detailed as individual Pay Transactions in addition to the standard Pay Transactions for the same quantity of time.
Apply Excursion Interpretation?	Indicates whether this Variation will apply Excursion Shift logic to the related Interpretation Rule. Excursion Standard End Time indicates the Standard End Time for Timesheet Entries that have populated an Excursion Timesheet Activity. Excursion Standard Hours indicates the Standard Hours for Timesheet Entries that have populated an Excursion Timesheet Activity Excursions. Excursion Standard Start Time indicates the standard Start Time for Timesheet Entries that have populated an Excursion Timesheet Activity.
Apply Penalty Loading	Indicates the requirement for a separate Pay Code for Penalty Loading to be applied during Interpretation and detailed as individual Pay Transactions in addition to the standard Pay Transactions for the same quantity of time.
Apply Shift End or Start Interpretation?	Indicates that both Shift Start and Shift End Breakpoints should be defined for the Variation.
Apply Wake Up Interpretation?	Indicates whether this Variation will apply Wake Up Shift Logic to the related Interpretation Rule.
Casual Loading Pay Code	Defines the Pay Code that applies to the casual loading Breakpoint value.
End	Defines the end of the Breakpoint.
Frequency' Standard Hours	Defines the maximum Standard Hours from which Overtime is payable for the remaining hours on the Timesheet (as determined by the Timesheet Frequency).
Interpretation Rule	Is the related Interpretation Rule that the Variation will be applied to.
Interpretation Rule Name	Defines the name for the Variation record.
Long Description	Is the description outlining the Variation's purpose. Users are encouraged to detail here the brief snapshot of how this Variation is configured, to assist with identifying differences between various Interpretation Rules with similar conditions and/or names.
Minimum Paid Hours	Defines the minimum hours payable when assessing Timesheet Entries for Weekday, Saturday, Sunday and Public Holiday Rules.
Pay Code	Defines the Pay Code that applies to the defined Breakpoint value.
Penalty Loading Pay Code	Defines the Pay Code that applies to the penalty loading Breakpoint value.
Short Description	Is the description that can be displayed in lookup search to assist users in selecting the correct Interpretation Rule.
Standard Hours	Defines the maximum Ordinary hours payable before overtime is paid for Weekday, Saturday, Sunday and Public Holiday Rules.
Start	Defines the start of the Breakpoint.
Timesheet Frequency	Defines the Timesheet Frequency for which the Variation has been set to interpret. The Timesheet Frequency on the 24 Hour Care Shift Variation must match the Timesheet Frequency on both the related Interpretation Rule and the Timesheet from the related Assignment. If the Variation does not match the Timesheet Frequency populated for related Timesheets, interpretation will not occur.
Variation Type	Is the type of Variation record that is selected for creation: Custom / 24hr Care Shift is utilised for Variations where Employees have differing standard hours, rates of pay or conditions of work from those outlined in the Interpretation Rule

	related to a Payee's Assignment. The name of this type of Variation will differ, as it is created on request and determined by the requirements of each particular Org. The 24hr Care Shift has been used as an example of a Custom Variation Type in this QRG. • Assignment is utilised for part-time Employees with differing standard hours from those outlined in the Interpretation Rule related to a Payee's Assignment record.
Variation Interpretation Type	Indicates the record type for the Interpretation Rule that the Variation will be applied to.
