

Purpose

The purpose of this quick reference guide is to step through the process of populating Split/Broken Shift & Sleepover Rules within the Interpretation Rule Builder. The intended audience for this document are system administrators / standard users.

Steps

Populate Split/Broken Shift & Sleepover Rules

Interpretation Rules are used to convert Timesheet Entries into Pay Transactions for payment of wages to Payees, taking into account different calculations for the amount of time worked.

Interpretation Rules are created using the Interpretation Rule Builder, which consists of a series of dynamic fields that differ based on the record type selected. These fields are broken into several sections, some of which are optional, to allow for various interpretation types.

See below for an ordered list of the QRGs related to each section of the Interpretation Rule Builder page for Hourly Rate, Shift End Time or Shift Start Time record types:

1. Populate Hourly Rate Interpretation Rules OR Shift Time Interpretation Rules
2. Populate Break Loading and Minimum Rest Rules **(optional)**
3. Create Split/Broken Shift and Sleepover Rules **(optional)**
4. Populate Allowance, Leave & Allowance Junction Rule Breakpoints **(optional)**
5. Create Breakpoints and Pay Code Caps

The Split/Broken Shift and Sleepover Rules define how fragmented and overnight shift work should be defined and calculated when creating Pay Transactions in association with this Interpretation Rule.

Sleepover Interpretation

To enable Sleepover Interpretation, identify the Split/Broken Shift and Sleepover Rules section of the Interpretation Rule Builder and follow the below steps.

1. Populate the following fields (see Figure 1):

- a. To apply Sleepover Interpretation to Timesheet Entries that occur before or after a sleepover period, select **Yes** from the available picklist options in the **Apply Sleepover Interpretation?** field.

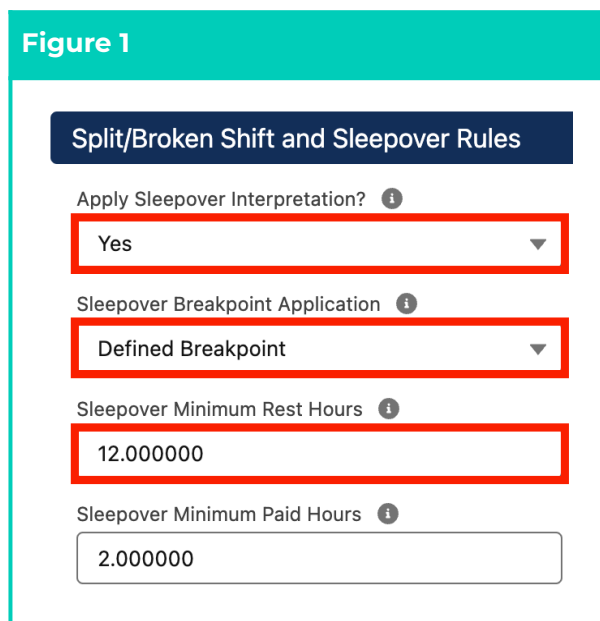

If Yes, a Sleepover Timesheet Activity Project Code **MUST** be created.

- b. Determine how Sleepover Timesheet Entries are interpreted by selecting from the available picklist options in the **Sleepover Breakpoint Application** field:

- i. **First Timesheet Entry** - Interpretation uses Breakpoints from the first Timesheet Entry.

Figure 1

- ii. **Second Timesheet Entry** - Interpretation uses Breakpoints from the second Timesheet Entry.
- iii. **Defined Breakpoint** - Interpretation uses Pay Codes from the Sleepover Breakpoint.
- iv. **Standard Interpretation** - Interpretation uses Breakpoints from the Timesheet Entry that the Sleepover occurs on.
- c. Define the minimum amount of hours that should lapse between each Sleepover Timesheet Entry by populating the **Sleepover Minimum Rest Hours** field.
- d. To define the minimum amount of payable hours for Sleepover Timesheet Entries, populate the **Sleepover Minimum Paid Hours** field.

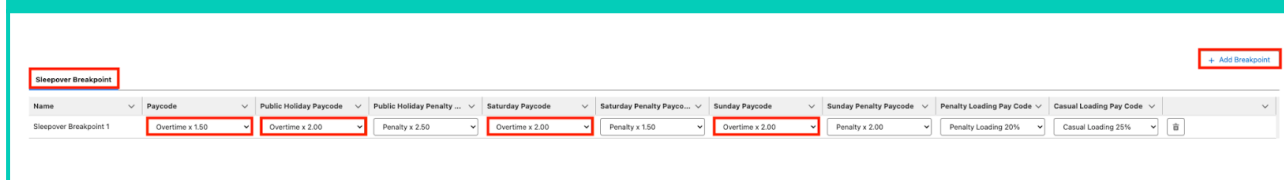

Sleepover Minimum Paid Hours are only applicable when Shift Logic is enabled. For more information on Shift Logic, please refer to the Interpretation Rule Builder Functionality Key Info QRG.

Enabling Shift Logic for Sleepover Interpretation will prevent Sleepover Timesheet Entries crossing days from applying Daily Minimum Hour calculations.

2. If Defined Breakpoint was selected in the Sleepover Breakpoint Application field, populate the following required fields (see Figure 2):
 - a. From the Sleepover Breakpoint tab, click on the **+ Add Breakpoints** button.
 - b. To define the Pay Code for Sleepover Pay Transactions during ordinary time, select from the available picklist options in the **Paycode** field.
 - c. To define the remaining Pay Codes for Sleepover Pay Transactions, select from the available picklist options in each of the following fields:
 - i. **Public Holiday Paycode**
 - ii. **Public Holiday Penalty Paycode** (if Penalty Loading is enabled)
 - iii. **Saturday Paycode**
 - iv. **Saturday Penalty Paycode** (if Penalty Loading is enabled)
 - v. **Sunday Paycode**
 - vi. **Sunday Public Holiday Paycode**
 - vii. **Penalty Loading Paycode** (if Penalty Loading is enabled)
 - viii. **Casual Loading Paycode** (if Casual Loading is enabled)

Figure 2

Name	Paycode	Public Holiday Paycode	Public Holiday Penalty Paycode	Saturday Paycode	Saturday Penalty Paycode	Sunday Paycode	Sunday Penalty Paycode	Penalty Loading Paycode	Casual Loading Paycode
Sleepover Breakpoint 1	Overtime x 1.50	Overtime x 2.00	Penalty x 2.50	Overtime x 2.00	Penalty x 1.50	Overtime x 2.00	Penalty x 2.00	Penalty Loading 20%	Casual Loading 25%

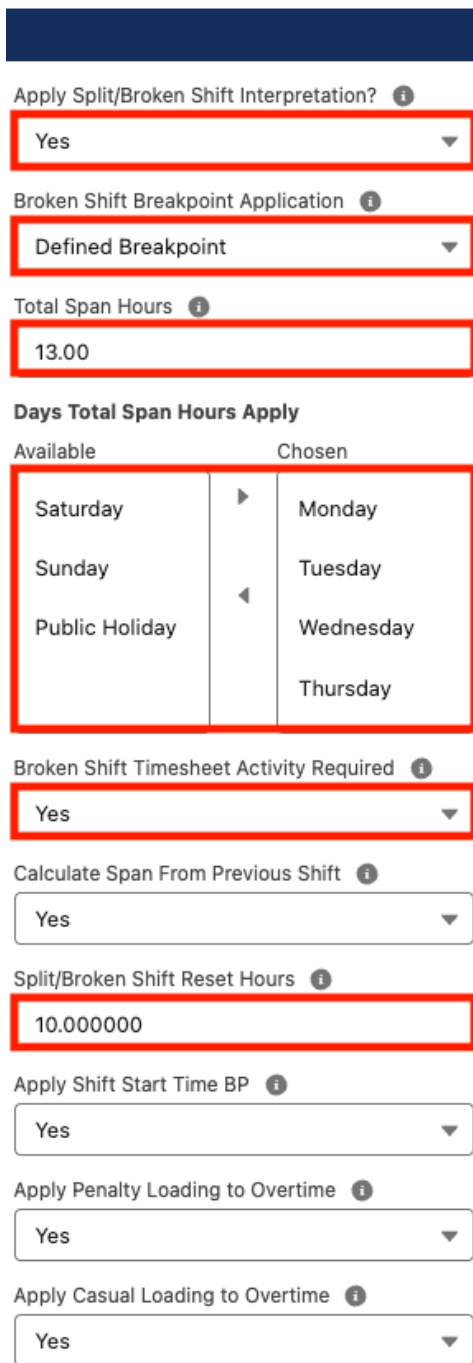

Split/Broken Shift Interpretation

To enable Split/Broken Shift Interpretation, identify the Split/Broken Shift and Sleepover Rules section of the Interpretation Rule Builder and follow the below steps.

3. Populate the following fields (see Figure 3):

- a. To apply Split/Broken Shift Interpretation to separate Timesheet Entries that relate to the same period of work, select **Yes** from the available picklist options in the **Apply Sleepover Interpretation?** field.
- b. Determine how Pay Transactions related to Broken Shift Timesheet Entries are interpreted by selecting from the available picklist options in the **Broken Shift Breakpoint Application** field:
 - i. **First Timesheet Entry** - Pay Transactions for two linked Broken Shift Timesheet Entries are Interpreted using Breakpoints from the first Timesheet Entry.
 - ii. **Second Timesheet Entry** - Pay Transactions for two linked Broken Shift Timesheet Entries are Interpreted using Breakpoints from the second Timesheet Entry.
 - iii. **Defined Breakpoint** - Pay Transactions for Broken Shift Timesheet Entries are Interpreted according to Pay Codes from the Split/Broken Shift Breakpoint.
 - iv. **Standard Interpretation** - Pay Transactions for Broken Shift Timesheet Entries are Interpreted using Breakpoints for the Timesheet Entry that the Broken Shift occurs on.
- c. Define the amount of hours that must be worked before Split/Broken Shift Breakpoints apply by populating the **Total Span Hours** field.

Interpretation Rule Builder - Populate Split/Broken Shift & Sleepover Rules

- d. Define the days that Split/Broken Shift conditions should be applied on by using the arrow buttons to move days from the **Available** to the **Chosen** column in the **Days Total Span Hours Apply** field.
 - e. Determine whether a Broken Shift Timesheet Activity Entry is required in order to trigger Broken Shift conditions by selecting from the available picklist options in the **Broken Shift Timesheet Activity Required** field
 - f. To enable Timesheet Entries associated with the Split/Broken Shift Timesheet Activity to be Interpreted using Shift Logic, rather than Daily Logic, populate the **Calculate Span From Previous Shift** field.
 - i. If **Yes**, define the maximum amount of hours that may elapse between Split/Broken Timesheet Entries related to the same Shift by populating the **Split/Broken Shift Reset Hours** field.
 - g. For Shift End Interpretation Rules, determine whether Interpretation should assess Split/Broken Shift Timesheet Entries using Shift Start Time and Shift End Time rather than only Shift End Time by selecting from the available picklist options in the **Apply Shift Start Time BP** field.
 - h. If Penalty Loading is enabled, determine whether Penalty Loading Pay Codes should be applied to Overtime for Broken Shift Timesheet Entries by selecting from the available picklist options in the **Apply Penalty Loading to Overtime** field.
 - i. If Casual Loading is enabled, define whether Casual Loading Pay Codes should be applied to Overtime for Broken Shift Timesheet Entries by selecting from the available picklist options in the **Apply Casual Loading to Overtime** field.
4. Populate the following required fields to define the Pay Codes that will be applied for Split/Broken Shift Penalties, where Split/Broken Shifts have occurred outside of the maximum limit defined in the Total Span Hours field (see Figure 4):
- a. From the Split/Broken Shift Breakpoint tab, click on the **+ Add Breakpoints** button.
 - b. To define the Pay Code for Split/Broken Shift Pay Transactions during ordinary time, select from the available picklist options in the **Paycode** field.
 - c. To define the remaining Pay Codes for Split/Broken Shift Pay Transactions, select from the available picklist options in each of the following fields:
 - i. **Overtime Pay Code**
 - ii. **Public Holiday Pay Code**
 - iii. **Public Holiday Overtime Pay Code**
 - iv. **Public Holiday Penalty Pay Code** (if Penalty Loading is enabled)
 - v. **Casual Loading Pay Code** (if Casual Loading is enabled)
 - vi. **Penalty Loading Pay Code** (if Penalty Loading is enabled)

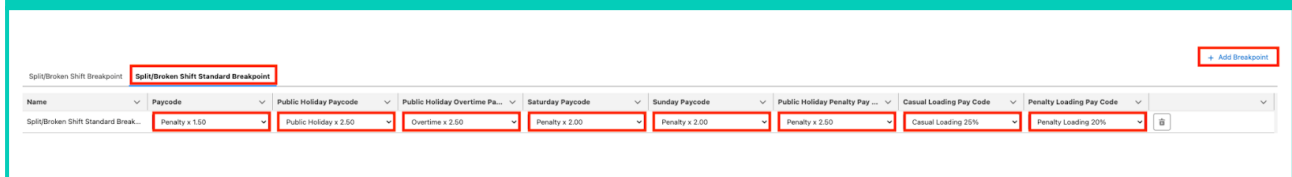

Figure 4

Name	Paycode	Overtime Pay Code	Public Holiday Pay Code	Public Holiday Overtime Pay Code	Public Holiday Penalty Pay Code	Casual Loading Pay Code	Penalty Loading Pay Code
Split/Broken Shift Breakpoint 1	Penalty x 1.50	Overtime x 2.00	Public Holiday x 2.50	Overtime x 2.50	Penalty x 2.00	Casual Loading 25%	Penalty Loading 20%

5. If Defined Breakpoint was selected in the Broken Shift Breakpoint Application field, populate the following required fields (see Figure 5):
 - a. From the Split/Broken Shift Standard Breakpoint tab, click on the **+ Add Breakpoints** button.
 - b. To define the Pay Code for Broken Shift Pay Transactions during ordinary time, select from the available picklist options in the **Paycode** field.
 - c. To define the remaining Pay Codes to apply to Split/Broken Shift Pay Transactions, select from the available picklist options in each of the following fields:
 - i. **Public Holiday Paycode**
 - ii. **Public Holiday Penalty Paycode** (if Penalty Loading is enabled)
 - iii. **Saturday Paycode**
 - iv. **Saturday Penalty Paycode** (if Penalty Loading is enabled)
 - v. **Sunday Paycode**
 - vi. **Sunday Public Holiday Paycode**
 - vii. **Penalty Loading Paycode** (if Penalty Loading is enabled)
 - viii. **Casual Loading Paycode** (if Casual Loading is enabled)

Figure 5

6. To complete the remaining required fields for this Interpretation Rule, follow the instructions provided in the Populate Hourly Rate Interpretation Rules or Populate Shift Time Interpretation Rules QRG

The Interpretation Rule cannot be saved or finalised until all required fields and Breakpoints have been populated, and Breakpoint & Pay Code Cap creation has been completed.

Field Descriptions

Field Name	Description
Apply Casual Loading to Overtime	Enables Casual Loading Pay Codes to be used to interpret Overtime hours on Split/Broken Shift Timesheet Entries.
Apply Penalty Loading to Overtime	Enables Penalty Loading Pay Codes to be used to interpret Overtime hours on Split/Broken Shift Timesheet Entries.
Apply Shift Start Time BP	Allows Shift Start Time Interpretation to be used when assessing Split/Broken Shift Timesheet Entries for Shift End Time Record Types.
Apply Sleepover Interpretation?	Defines whether the Interpretation Rule requires Sleepover Interpretation to be calculated.
Apply Split/Broken Shift Interpretation?	Defines whether the Interpretation Rule requires Split/Broken Shift Interpretation to be calculated.
Broken Shift Breakpoint Application	Defines how the Broken Shift Timesheet Entries are calculated during Interpretation: • First Timesheet Entry causes all Pay Transactions associated with two linked Broken Shift Timesheet Entries to be Interpreted using the Breakpoint that has been applied to the first Timesheet Entry. • Second Timesheet Entry causes all Pay Transactions associated with two linked Broken Shift Timesheet Entries to be Interpreted using the Breakpoint that has been applied to the second Timesheet Entry. • Defined Breakpoint causes Pay Transactions associated with two linked Broken Shift Timesheet Entries to be Interpreted according to the Pay Codes defined within the Sleepover Breakpoint. • Standard Interpretation causes Pay Transactions associated with two linked Broken Shift Timesheet Entries to be Interpreted according to the existing Breakpoints for the Timesheet Entry that the Sleepover occurs on.
Broken Shift Timesheet Activity Required	Defines whether Broken Shift logic requires a Timesheet Activity to be calculated. • If Yes, Shift logic will only be applied to Timesheet Entries populated with a Split/Broken Shift Timesheet Activity.
Calculate Span from Previous Shift	Enables Timesheet Entries that are considered Split/Broken Shift to be calculated based on the previous Timesheet Entry using the Split/Broken Shift Reset Hours.
Days Total Span Hours Apply	Defines the days that Shift/Broken Shift conditions should be applied on.
Sleepover Breakpoint Application	Defines how Sleepover Timesheet Entries are calculated during Interpretation: • First Timesheet Entry causes all Pay Transactions associated with two linked Sleepover Timesheet Entries to be Interpreted using the Breakpoint that has been applied to the first Timesheet Entry. • Second Timesheet Entry causes all Pay Transactions associated with two linked Sleepover Timesheet Entries to be Interpreted using the Breakpoint that has been applied to the second Timesheet Entry. • Defined Breakpoint causes Pay Transactions associated with two linked Sleepover Timesheet Entries to be Interpreted according to the Pay Codes defined within the Sleepover Breakpoint. • Standard Interpretation causes Pay Transactions associated with two linked Sleepover Timesheet Entries to be Interpreted according to the existing Breakpoints for the Timesheet Entry that the Sleepover occurs on.
Sleepover Minimum Paid Hours	Defines the minimum amount of hours payable for Sleepover Timesheet Activities occurring on Sleepover Timesheet Entries. When this field is defined, Interpretation will assess minimum hours for ONE of the active Sleepover periods. If the defined amount of minimum hours has not been met, the Sleepover Timesheet Entry that is closest to the Sleepover Minimum Paid Hours will be uplifted.
Sleepover Minimum Rest Hours	Defines the hours that Minimum Rest logic would apply for Sleepover Entries.
Split/Broken Shift Reset	Defines the maximum gap of hours between consecutive Timesheet Entries to be considered as part

Hours	of the same Split/Broken Shift.
Total Span Hours	Defines the total hours that apply per day for handling Split/Broken Shifts.
