Disclaimer

Please ensure you have read and understood this disclaimer before installing the Utility Extension into your Sandbox and Production environments.

The 2cloudnine Utility Extension Package is an unmanaged package providing customers with the ability to increase functionality and provide general usability enhancements that are not yet available in our managed Payroll, Time2Pay, General Ledger and Community Packages.

It is intended to provide customers with a base build of components that can be cloned and customised to meet the needs of their specific business requirements.

The Utility Extension Package is available to all 2cloudnine customers as an optional installation and is not supported under the standard 2cloudnine support agreement. Any questions or issues relating to the Utility Extension must be referred to your Salesforce Administrator.

Whilst every endeavour has been made to ensure optimal performance of the available components, it is the responsibility of the customer installing the package to perform all adequate testing, including any load testing.

The Utility Extension leverages fields and components from the 2cloudnine standard managed packages but does not undergo the same rigorous QA process. This means that we do not guarantee any future upgrade to our managed 2cloudnine packages will not have an adverse impact on functionality provided in the Utility Extension. It is the responsibility of any customer installing a new 2cloudnine package to also consider the Utility Extension in their package testing.

Where a new 2cloudnine managed package includes functionality that supersedes that in the Utility Extension, all effort will be made to communicate this as part of our Release Notes. It will however be the responsibility of the customer to disable any respective components from the Utility Extension.

As an unmanaged package, the Utility Extension cannot be upgraded. Any new releases of the Utility Package that contain upgraded components you wish to utilise will first require you to uninstall the existing package.

We strongly recommend that any flows deployed with the Utility Package are cloned and saved as a new copy. Failure to do this means the flows and any changes made to them will be deleted during the uninstall.

Only your authorised Salesforce System Administrator or Partner should be actioning any installation, configuration items and tasks.

The Salesforce System Administrator or Partner will be responsible for ensuring all these configuration items and tasks are completed within a reasonable timeframe of the packages being installed. Please ensure you have familiarised yourself with all of the requirements PRIOR to installing the package and ensure you have

sufficient time and resources available for configuration and testing. Failing to do so can negatively impact the user experience and stability of 2cloudnine Payroll.

Where the Utility Package is installed and configured by 2cloudnine, it remains the responsibility of your Salesforce System Administrator or Partner to have read and understood the requirements of this guide in full.

They must ensure that any necessary information / data is provided to 2cloudnine in a timely manner as well as ensure there is adequate time and resources within the organisation to effectively test the installed functionality.

None of the components included in the Utility Extension package should be activated within a production org until it is sufficiently tested in an up-to-date sandbox.

This guide should always be accessed and used via your web browser. This will ensure you are viewing the most recent version of the document. Further, downloading the document and opening it with desktop programs, such as Adobe, have been found to cause errors when copying and using the scripts provided for data updates. These errors do not occur when viewed through a browser.

Pre-Installation Checklist

The following items are highly recommended to be completed prior to commencing the installation and configuration of the Utility Package.

Configuration Item / Task		Requirement?
Read Before Installing		
☐	Prerequisites	Compulsory
☐	Install the Utility Extension package	Compulsory
☐	Upgrading the Utility Package	Conditionally Compulsory

Installation and Configuration Checklist

All components in the Utility Package are optional for activation. Where you will be utilising a component then you must complete all compulsory requirements and where applicable conditionally compulsory requirements to ensure the functionality works as intended.

Configuration Item / Task		Requirement?
Tax File Number Declaration Screenflow		
☐	Enable Custom Setting	Compulsory

Read Before Installing

Prerequisites

The following packages must be installed in the Org before you can install the 2cloudnine Utilities Extension:

- 2cloudnine Payroll Package
- 2cloudnine Time2Pay Package
- 2cloudnine Communities Package

Package Name (to be installed): 2cloudnine Utilities Extension:

<https://login.salesforce.com/packaging/installPackage.apexp?p0=04t5g000000hHEh>

Installing the Package

When you install an unmanaged package you need to select if the security is going to be applied to all profiles or you need to manually select which profiles you will be applying the security to. This will only happen on the first install of the product so make sure you get it right.

The image shows two side-by-side screenshots of the Salesforce package installation interface for the 'Upgrade 2cloudnine Time2Pay Extension'.

The left screenshot shows the initial installation options. It includes a warning icon and text: 'An earlier version is installed. It can be upgraded while preserving the existing data. Installed: December (v1.40) (1.40) New Version: January (v1.43) (1.43)'. Below this are three radio button options: 'Install for Admins Only', 'Install for All Users' (which is selected), and 'Install for Specific Profiles...'. There is also a warning about installing a Non-Salesforce Application and a checkbox for acknowledging this.

The right screenshot shows the 'Select Specific Profiles' step. It includes a warning icon and text: 'Standard profiles (including the Read-Only profile) don't receive access to any installed custom objects. Because permissions are not editable for standard profiles, you must clone your profile to grant access.' Below this is a table with columns 'Profile' and 'Access Level'. The table lists several profiles: System Administrator, Standard User, Read-Only, Solution Manager, Marketing User, and Contact Manager. The 'Access Level' for each profile is set to 'Full Access'.

As an unmanaged package you will also need to select an option for what to do when installing components with conflicting names. In order to proceed with the installation you must select 'Rename conflicting components in the package'.

The image shows a warning dialog box with a yellow triangle icon containing an exclamation mark. The title is 'What if existing component names conflict with ones in this package?'. Below the title are two radio button options: 'Do not install.' and 'Rename conflicting components in package.' (which is selected).

Upgrading the Utility Package

As an unmanaged package, the Utility Package cannot be upgraded. Any new releases of the Utility Package that contain new or updated components that you wish to utilise will first require you to uninstall the existing package.

Any components from the Utility Package that are in use and you wish to keep must be saved as new prior to uninstalling the Utility Package (ie Cloned). If this step has been skipped or an edited component has only been saved as a new version prior to the uninstall of the Utility package then they will be deleted during the uninstall process.

We strongly recommend that anytime a component from the Utility Package is used that you save a new copy at the time to avoid any risk of data deletion.

Tax File Number Declaration Screenflow

About

The Tax File Number Declaration screenflow can be added to the Employee community to provide a user-friendly option for completing an online Tax File Number Declaration.

The screenflow which is closely aligned to the ATO's standard TFN Declaration form can be used to replace the 'TFN Details' tab on 2c9 'Emp Comm Profile' and will allow an employee to both create and update their PAYG Withholding record.

An additional option to show or hide an employee's name and DOB information allows for greater control over what information the employee can update.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow not displaying or running with errors.

1. Enable Custom Setting (compulsory)
2. Update Profile/Permission Sets (compulsory)
3. Activate Flow (compulsory)
4. Add Flow to Community Builder (compulsory)
5. Enable update to Personal Information (optional)

Enable Custom Setting

1. Go to Setup and Search 'Custom Settings'
2. Locate the custom setting 'Utility Extension Settings' and select 'Manage'
3. Click 'New' and then cancel to create the setting

Update Profile/Permission Sets

The access outlined in Appendix 1 must be made available for use either via profiles or custom permission sets in order to use this flow.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Community Capture TFN Details'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Add Flow to Community Builder

The screenflow is only available for the community and must be added to a community page using the community builder:

1. Go to Setup and Search 'All Sites'
2. Locate your Employee community and select 'Builder'
3. Navigate to the page you want the flow to be inserted into (We recommend using a 'My Profile' page and using the Tabs component if using the TFN, Super and Payment Details Screen Flows.)
4. Drag the flow component where you would like
5. In the flow component window select the flow labelled 'Community Capture TFN Details' and leave everything else as default
6. If you are using the standard 2c9 'Emp Comm Profile' LWC we recommend clicking into it and setting the picklist 'Enable TFN Details Tab' to 'No'
7. Publish your community

Enable Update to Personal Information

The flow contains a section for an employee's name and DOB which is enabled by default and contains the following fields; Title, Firstname, Surname, Other Names, Previous Family Name, DOB.

Customers that do not want employees to update this information can disable it:

1. Go to Setup and Search 'Custom Settings'
2. Locate the custom setting 'Utility Extension Settings' and select 'Manage'
3. Check the setting 'TFN Remove Personal Details' and click 'Save'

Superannuation Choice Screenflow

About

The Superannuation Choice screenflow can be added to the Employee community to provide a user-friendly option for employees to add or update a Super Withholding record.

The screenflow can be used to replace the 'Super Details' tab on the 'Emp Comm Profile' LWC and provides options for adding an APRA, SMSF or Client Default fund.

An additional feature allows the upload of files for an APRA or SMSF to be made mandatory, preventing the employee from continuing without first uploading the required fund documents.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow not displaying or running with errors.

1. Enable Custom Setting (compulsory)
2. Update Profile / Permission Sets (compulsory)
3. Activate Flow (compulsory)
4. Add Flow to Community Builder (compulsory)
5. Mandatory File Uploads (optional)

Enable Custom Setting

1. Go to Setup and Search 'Custom Settings'
2. Locate the custom setting 'Utility Extension Settings' and select 'Manage'
3. Click 'New' and then cancel to create the setting

Update Profile / Permission Sets

The access outlined in Appendix 1 must be made available for use either via profiles or custom permission sets in order to use this flow.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Community Capture Super Details'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Add Flow to Community Builder

The screenflow is only available for the community and must be added to a community page using the community builder:

1. Go to Setup and Search 'All Sites'
2. Locate your Employee community and select 'Builder'
3. Navigate to the page you want the flow to be inserted into (We recommend using a 'My Profile' page and using the Tabs component if using the TFN, Super and Payment Details Screen Flows.)
4. Drag the flow component where you would like
5. In the flow component window select the flow labelled 'Community Capture Super Details' and leave everything else as default
6. If you are using the standard 2c9 'Emp Comm Profile' LWC we recommend clicking into it and setting the picklist 'Enable Super Details Tab' to 'No'
7. Publish your community

Mandatory File Uploads

The flow provides the option to make file uploads mandatory for both APRA and SMSF funds. To enable this feature:

1. Go to Setup and Search 'Custom Settings'
2. Locate the custom setting 'Utility Extension Settings' and select 'Manage'
3. Check the setting 'Super SMSF File Mandatory' And/Or 'Super Apra File Mandatory'.
4. If you need to update the wording in the mandatory file upload, this must be done within the flow itself. Please contact your system admin if this is required.

Payment Details Screenflow

About

The Payment Details screenflow can be added to the Employee community to provide a user-friendly option for employees to add or update their Payment Details records

The screenflow can be used to replace the 'Payment Details' tab on the 'Emp Comm Profile' LWC and provides the employee with the ability to set up multiple accounts with different distribution types such as fixed or percentage.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow not displaying or running with errors.

1. Update Profile / Permission Sets (compulsory)
2. Activate Flow (compulsory)
3. Add Flow to Community Builder (compulsory)

Update Profile / Permission Sets

The access outlined in Appendix 1 must be made available for use either via profiles or custom permission sets in order to use this flow.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Community Capture Payment Details'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Add Flow to Community Builder

The screenflow is only available for the community and must be added to a community page using the community builder:

1. Go to Setup and Search 'All Sites'
2. Locate your Employee community and select 'Builder'
3. Navigate to the page you want the flow to be inserted into (We recommend using a 'My Profile' page and using the Tabs component if using the TFN, Super and Payment Details Screen Flows.)
4. Drag the flow component where you would like
5. In the flow component window select the flow labelled 'Community Capture Payment Details' and leave everything else as default
6. If you are using the standard 2c9 'Emp Comm Profile' LWC we recommend clicking into it and setting the picklist 'Enable Payment Details Tab' to 'No'
7. Publish your community

Timesheet Notifications Record Triggered Flow

About

The Timesheet Notifications record triggered flow is used to send emails to employees and approvers based upon the 'Timesheet' Notification Setting related to an assignment's related pay schedule or client.

This flow is intended to be used as an interim solution for upcoming standardisations to notification functionality as of this document version.

Enabling this flow will ensure all immediate send options defined on the notification setting will trigger emails as intended.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow running with errors:

1. Create new picklist values (compulsory)
2. Create Timesheet Notification Setting (conditionally compulsory)
3. Update Notification Setting to use flow (conditionally compulsory)
4. Add and verify Organisation Wide Email Address (conditionally compulsory)
5. Update Email Templates (optional)
6. Activate Flow (compulsory)

Create new picklist values

1. Go to Setup and Search 'Picklist Value Sets'
2. Add a picklist value 'Custom Send' and ensure you select 'Add the new picklist values to all Record Types that use this Global Value Set.' to the following picklist value sets:

- a. Auto Send A.Approver Approval Request
- b. Auto Send Employee Approved
- c. Auto Send Employee Rejected
- d. Auto Send P.Approver Actioned By Other
- e. Auto Send P.Approver Actioned On Behalf
- f. Auto Send P.Approver Approval Request

Create Timesheet Notification Setting

This step is compulsory if you do not yet have a Timesheet Notification Setting or want a separate setting for the custom flow.

1. Select the App Launcher and search for 'Notification Settings'.
2. Click the 'New' button and select the 'Timesheet' notification record type.
3. Progress to the next step.

Update Notification Setting to use flow

This step is compulsory for any setting that you wish to use the flow for sending of the email. If you do not wish to send an email for an option, select 'Don't Send Automatically'

1. Open your Timesheet Notification Setting record.
2. Define an email in the 'Notification from Email Address' field which will be used as the sending emails From address. This email must be a verified org wide email address (see below)
3. Update your required auto-send options to the new 'Custom Send' picklist value:
 - a. Auto Send A.Approver Approval Request
 - b. Auto Send Employee Approved
 - c. Auto Send Employee Rejected
 - d. Auto Send P.Approver Actioned By Other
 - e. Auto Send P.Approver Actioned On Behalf
 - f. Auto Send P.Approver Approval Request
4. Update all remaining fields.

Important! - Reminder Notifications are not supported by this flow or the current 2cloudnine product.

Add and verify Organisation Wide Email Address

The step is compulsory if your org does not yet have an organisation wide email address or you wish to use a different sending address for the notification email.

1. Go to Setup and Search 'Organisation-Wide Addresses'
2. Add either a user purpose or special purpose Organisation-Wide Email Address and ensure the email is set as per step 2. Once saved an email will be sent to that email address which you must click and verify.

Update Email Templates

This flow uses text templates within the flow itself. If you wish to update an email template you must do it within the flow by updating the various text templates (supports HTML) and saving a new version of the flow.

The text templates contain basic formatting with no letterheads.

Please note the link to access the community found in the approver request emails is by default set to the value defined in the 'Approver Link Token' field of the approvers contact record. If you are using a different community such as an authenticated user, then you will need to update the text templates with your static community URL.

Please contact your system administrator if you need to update a template.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually activated:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Timesheet Notifications'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Leave Notifications Record Triggered Flow

About

The Leave Notifications record triggered flow is used to send emails to employees and Approvers based upon the 'Leave' Notification Setting related to an assignment's pay schedule or client.

This flow is intended to be used as an interim solution for upcoming standardisations to notification functionality as of this document version.

Enabling this flow will ensure all immediate send options defined on the notification setting will trigger emails as intended.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow running with errors:

1. Create new picklist values (compulsory)
2. Create Leave Notification Setting (conditionally compulsory)
3. Update Notification Setting to use flow (conditionally compulsory)
4. Add and verify Organisation Wide Email Address (conditionally compulsory)

5. Update Email Templates (optional)
6. Activate Flow (compulsory)

Create new picklist values

1. Go to Setup and Search 'Picklist Value Sets'
2. Add a picklist value 'Custom Send' and ensure you select 'Add the new picklist values to all Record Types that use this Global Value Set.' to the following picklist value sets:
 - a. Auto Send A.Approver Approval Request
 - b. Auto Send Employee Approved
 - c. Auto Send Employee Rejected
 - d. Auto Send P.Approver Actioned By Other
 - e. Auto Send P.Approver Actioned On Behalf
 - f. Auto Send P.Approver Approval Request

Create Leave Notification Setting

This step is compulsory if you do not yet have a Leave Notification Setting or want a separate setting for the custom flow.

1. Select the App Launcher and search for 'Notification Settings'.
2. Click the 'New' button and select the 'Leave' notification record type.
3. Progress to the next step.

Update Notification Setting to use flow

This step is compulsory for any setting that you wish to use the flow for sending of the email. If you do not wish to send an email for an option, select 'Don't Send Automatically'.

1. Open your Leave Notification Setting record.
2. Define an email in the 'Notification from Email Address' field which will be used as the sending emails From address. This email must be a verified org wide email address (see below)
3. Update your required auto-send options to the new 'Custom Send' picklist value:
 - a. Auto Send A.Approver Approval Request
 - b. Auto Send Employee Approved
 - c. Auto Send Employee Rejected
 - d. Auto Send P.Approver Actioned By Other
 - e. Auto Send P.Approver Actioned On Behalf
 - f. Auto Send P.Approver Approval Request
4. Update all remaining fields.

Important! - Reminder Notifications are not supported by this flow or the current 2cloudnine product.

Add and verify Organisation Wide Email Address

The step is compulsory if your org does not yet have an organisation wide email address or you wish to use a different sending address for the notification email.

1. Go to Setup and Search 'Organisation-Wide Addresses'

2. Add either a user purpose or special purpose Organisation-Wide Email Address and ensure the email is set as per step 2. Once saved an email will be sent to that email address which you must click and Verify.

Update Email Templates

This flow uses text templates within the flow itself. If you wish to update an email template you must do it within the flow by updating the various text templates (supports HTML) and saving a new version of the flow.

The text templates contain basic formatting with no letterheads.

Please note the link to access the community found in the Approver Request Emails is by default set to the value defined in the 'Approver Link Token' field of the approvers contact record. If you are using a different community such as an authenticated user, then you will need to update the text templates with your static community URL.

Please contact your system administrator if you need to update a template.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Leave Notifications'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Expense Claim Notifications Record Triggered Flow

About

The Expense Notifications record triggered flow is used to send emails to employees and approvers based upon the 'Expense Claim' Notification Setting related to an assignment's pay schedule or client.

This flow is intended to be used as an interim solution for upcoming standardisations to notification functionality as of this document version.

Enabling this flow will ensure all immediate send options defined on the notification setting will trigger emails as intended.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow running with errors:

1. Create new picklist values (compulsory)
2. Create Expense Claim Notification Setting (conditionally compulsory)
3. Update Notification Setting to use flow (conditionally compulsory)
4. Add and verify Organisation Wide Email Address (conditionally compulsory)
5. Update Email Templates (optional)
6. Activate Flow (compulsory)

Create new picklist values

1. Go to Setup and Search 'Picklist Value Sets'
2. Add a picklist value 'Custom Send' and ensure you select 'Add the new picklist values to all Record Types that use this Global Value Set.' to the following picklist value sets:
 - a. Auto Send A.Approver Approval Request
 - b. Auto Send Employee Approved
 - c. Auto Send Employee Rejected
 - d. Auto Send P.Approver Actioned By Other
 - e. Auto Send P.Approver Actioned On Behalf
 - f. Auto Send P.Approver Approval Request

Create Expense Claim Notification Setting

This step is compulsory if you do not yet have an Expense Claim Notification Setting or want a separate setting for the custom flow.

1. Select the App Launcher and search for 'Notification Settings'.
2. Click the 'New' button and select the 'Expense Claim' notification record type.
3. Progress to the next step.

Update Notification Setting to use flow

This step is compulsory for any setting that you wish to use the flow for sending of the email. If you do not wish to send an email for an option, select 'Don't Send Automatically'

1. Open your Leave Notification Setting record.
2. Define an email in the 'Notification from Email Address' field which will be used as the sending emails From address. This email must be a verified org wide email address (see below)
3. Update your required auto-send options to the new 'Custom Send' picklist value:
 - a. Auto Send A.Approver Approval Request
 - b. Auto Send Employee Approved
 - c. Auto Send Employee Rejected
 - d. Auto Send P.Approver Actioned By Other
 - e. Auto Send P.Approver Actioned On Behalf
 - f. Auto Send P.Approver Approval Request
4. Update all remaining fields.

Important! - Reminder Notifications are not supported by this flow or the current 2cloudnine product.

Add and verify Organisation Wide Email Address

The step is compulsory if your org does not yet have an organisation wide email address or you wish to use a different sending address for the notification email.

1. Go to Setup and Search 'Organisation-Wide Addresses'
2. Add either a user purpose or special purpose Organisation-Wide Email Address and ensure the email is set as per step 2. Once saved an email will be sent to that email address which you must click and Verify.

Update Email Templates (optional)

This flow uses text templates within the flow itself. If you wish to update an email template you must do it within the flow by updating the various text templates (supports HTML) and saving a new version of the flow.

The text templates contain basic formatting with no letterheads.

Please note the link to access the community found in the Approver Request Emails is by default set to the value defined in the 'Approver Link Token' field of the Approver's Contact record. If you are using a different community such as an authenticated user, then you will need to update the text templates with your static community URL.

Please contact your system administrator if you need to update an email template.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flow'
2. Locate the flow labelled 'Expense Notifications'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Assign Employee Community Permission Sets Record Triggered Flow

About

The Assign Employee Community Permission Sets record triggered flow is used to automatically assign the 'Employee Community Permission Set' and 'Employee Community Permission Set Clone' permission sets on the creation of a User record with the 'Customer Community User' profile.

These permission sets are required to ensure employee community users can access all required functionality of the Employee community. For more information on these permission sets please refer to the [Community Configuration and Implementation Guide](#).

Important! - The 2cloudnine Time2Pay product includes a custom setting 'Time2pay Portal Permission Sets' that can also be used to automatically apply permission sets to profiles. You must only use one of these options as enabling both will cause the flow to fail.

Whilst we always recommend using product functionality this flow can be used when additional functionality is required, such as assigning approver permission sets or updating the user record.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow not running and users having minimal access to the Employee community.

1. Activate Flow (compulsory)

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flows'
2. Locate the flow labelled 'Assign Employee Permission Sets'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Expense Claim Notification Manager Screenflow

About

The Expense Claim Notification Manager Screenflow can be used to automatically send Expense Claim reminder emails to employees and approvers to action pending expense claims.

The screenflow provides users with the option to send email reminders to employees with rejected expense claims or primary and alternative approvers with pending submitted expenses claims.

This screenflow does not use any of the 2cloudnine notification settings. A single email will be sent to every employee or approver based upon the option selected and for every applicable expense claim.

Configuration

The flow requires the following configuration before it can be used. Failure to complete these steps will result in the flow running with errors:

1. Create and Verify Organisation Wide Email Address (conditionally compulsory)
2. Update email templates (optional)

3. Activate Flow (compulsory)

Create and Verify Organisation Wide Email Address

This step is only required if you do not already have an organisation wide email address. If one already exists please move to the next step.

1. Go to Setup and Search 'Organisation-Wide Addresses'
2. Add an Organisation-Wide Email Address
3. Verify the email sent to that email address which you must click and Verify.

Note - If multiple organisation wide email addresses exist, the screenflow will use the first record that was created in your org as the sender address. If a different email address is required, you must update the flow.

Update Email Templates

This flow uses text templates within the flow itself. If you wish to update an email template you must do it within the flow by updating the various text templates (supports HTML) and saving a new version of the flow.

The text templates contain basic formatting with no letterheads.

Please note the link to access the community found in the approver request emails is by default set to the value defined in the 'Approver Link Token' field of the approvers contact record. If you are using a different community such as an authenticated user, then you will need to update the text templates with your static community URL.

Please contact your system administrator if you need to update a template.

Activate Flow

By default all flows in the Utility Extension are disabled upon installation and must be manually enabled:

1. Go to Setup and Search 'Flows'
2. Locate the flow labelled 'Expense Claim Notification Manager'
3. Select 'View Details and Versions'
4. Select 'Activate' next to the version with the highest number

Important! - If your internal end users will be accessing and running the screenflow, you will need to provide access to the flow. There are many ways to make flows available within an org including the utility bar, home page, record pages and buttons.

Reports & Dashboards

About

The Utilities Package contains numerous Reports & Dashboards which are recommended for users to run to assist with their various processes throughout the Payroll and Invoicing stages of 2c9 Payroll.

As the reports are packaged, their predetermined filters will often be generic ones, and once installed it is recommended that users review all reports against when each report is needed for their own process, in order to evaluate if there are more suitable filters or groupings that should be applied.

The reports within the dashboards are those that are recommended by 2cloudnine Payroll SMEs: customisations can easily be made by cloning and updating each dashboard with custom reports.

It may appear that some reports are duplicates: however you will find on closer inspection that often reports are filtered slightly differently, or use different source data in order to present information in a different manner.

Users are reminded that any changes made to the templated reports, including such as altering or adding filters, adding or deleting fields, or amending the grouped fields will override the default Report/Dashboard installed, making the original installed version unavailable.

It is highly recommended to clone and maintain a new version of the templated report should you wish to make any changes.

Timesheets

Approved Timesheets with Zero Hours

This report is suitable for reviewing which timesheets have been submitted by payees for not working any hours this timesheet period. It is recommended to run this report before the creation of Pay Batches.

Assignments with NO Timesheets Report

This report provides users with a complete list of temp assignments currently without any timesheets. It is recommended that this is run regularly before any notifications are sent out to payees to submit their timesheets, to ensure all payees who should have timesheets awaiting submission have them available to enter times against.

Failed Timesheets

Payroll users will find this report useful to run prior to the Pay Batch Creation stage to ensure all timesheets have had their pay transactions created successfully by the related interpretation rule. It is recommended that this is run prior to any pay batch creation as those appearing on this report will not be included in the pay batches created until any issues on the timesheets are resolved and pay transactions are created successfully.

Flagged Timesheets for Review

This report provides all timesheets which have been checked as “Flagged for Review” on either the timesheet or the timesheet entry. This record may have been ticked manually by payroll users, or it may have been applied by an automation using Workflow Rules or Flows.

Missing Timesheets Report

This report provides users with a list of temp assignments where the “Is Timesheet Created?” checkbox field is false. It is recommended that this is run regularly to resolve the missing timesheets to enable payees to submit them in a timely manner.

Public Holidays - TSEs for Review

This Report will identify all pay transactions where the associated timesheet entry has the “Is Public Holiday?” checkbox marked as True. Users would then review these pay transactions to confirm that the payee has actually worked on that day, and that the Pay Code and Pay Rate being used are correct. It would be recommended to run this report prior to creating the pay batches.

Timesheet Debug Report

This report provides a list of all Debugs created this week, where the source is Time2Pay and they are not related to expense claims. This report is best accessed from the Debugs Dashboard on a regular basis, especially if there are issues occurring.

Timesheet Status Report

This report provides a full list of all timesheets where the end date is less than or equal to Today, and the pay transactions are not processed. This would provide users with a view of how many timesheets are still awaiting submission, are still awaiting approval, or have been rejected and therefore required corrections before submitting again. Users may prefer to filter this report on just the current Pay Calendar Period, or to filter based on particular Payment Entities. It would be recommended to run this report prior to the creation of the Pay Batch.

Timesheets vs Transactions Report

This joined report is the master to review all approved timesheets, against the pay transactions that have been created against them, including those for allowances and expenses. It allows the user to review horizontally the interpretation of the timesheet, including Pay Rates and Invoice Rates applied, and data can be “checked off” from this report by applying an additional filter such as the “Flags Acknowledged” fields. It is recommended that this report is reviewed prior to the creation of any pay batches for timesheet payees.

Timesheets with Notes

This report lists all timesheets that have either approver notes or employee notes on the timesheet or timesheet entries. Ideally, this would be run by payroll users prior to the creation of the pay batch, and after review may require some amendments to the pay transactions that have been created by the interpretation rule.

Payroll

Allowance Pay Transactions for Review

This report is currently filtered on pay transactions with a record type of Allowance that are not yet included in a pay batch. The intended use of this report is to review those pay transactions created via interpretation rules or are timesheet allowances selected by payees, and that need a final review by payroll prior to being processed in a pay batch.

Contractor Payees without GST Tax Details

This report will list all payees who have their Earner Type as PTY/LTD or Self Employed, and currently do not have a Payee Withholding of Record Type AU GST created. This should be run prior to the pay batch creation to ensure any payees of this earner type have the required GST calculations applied.

Current Leave Balances

This report will provide the current leave balance as detailed on a payee leave rule, specific to those record types that either have an accrual or a credit applied which can be taken as leave at a later date. This report would be most useful to run after the pay batch status is Payment File Released, or as part of end of month processing.

Debug Headers - 2cloudnine Payroll

This report provides a list of all debugs created this week, where the source is 2cloudnine Payroll. This report is best accessed from the debugs dashboard on a regular basis, especially if there are issues occurring.

Debug Headers - This Week

This report provides a list of all debugs created this week, where the source is Time2Pay and are not related to expense claims. This report is best accessed from the debugs dashboard on a regular basis, especially if there are issues occurring.

Debug Headers - Time2Pay

This report provides a list of all debugs created this week, where the source is Time2Pay. This report is best accessed from the debugs dashboard on a regular basis, especially if there are issues occurring.

Debug Headers - Today

This report provides a list of all debugs created today, regardless of the product that has created the debug. This report is best accessed from the debugs dashboard on a regular basis, especially if there are issues occurring.

Deductions File Cross Check

This report lists all deduction pay transactions, and provides some details for related records. Users may find this useful to be run after the pay batch status becoming "Payment File Released" as a way of confirming the superstream lodgement, or to create any payments to child support or other third party companies. Users may like to add an additional filter based on the payment date.

Deductions Limit Remaining Report

This report will provide all payee deductions records where a value in the “Amount Remaining” field is populated. This would be useful for Payroll & Finance users to identify how much remains on various deductions. It is recommended to run this either before or after a pay batch is at status “Payment File Released”.

Deductions Report for Payroll Processing

This report is grouped by deduction pay code, and provides a full list of the deduction pay transactions processed and the pay batch they were processed in. Users may filter this based on “Payment Processed Date” during a particular period of time (last fortnight or last month) or for a particular pay batch. It is recommended this is run to confirm the payments to be made to various third parties (eg. union fees, child support agency, garnishees, etc).

Expense Claims with GST Breakdown

This report provides users with a complete list of the expense claims, their associated expenses, and the GST breakdown for them. It would be recommended to run this prior to the creation of the pay batches, so any issues with the GST breakdown are resolved prior to being locked from inclusion in the pay batch. Users may wish to add an additional filter to ensure it only reports on expenses claims where the expenses are not already included in a pay batch.

Leave Balances Report

This report provides the full history of a payee’s leave balance by payee leave rule as reported on their pay advice lines. Users may wish to filter this based on a particular payee, or group of payees such as in a payment entity. It also includes a chart at the top grouped by leave rule type. This report would be useful to run after pay batch status is “Payment File Released”, as part of end of month processing, or specific to reviewing a payee’s changes in leave balances.

Pay Batch Deductions Report

This report provides a detailed list of all deduction pay transactions processed in a pay batch, grouped by payroll processed date, by payee. This is useful to confirm to finance teams what has been processed against the GL. It is recommended that this is processed after a pay batch is calculated for reviewing, and often after a pay batch to provide to finance teams.

Pay Transactions not in a Pay Batch

This report is to identify all pay transactions that are not yet processed in a pay batch to ensure no pay transactions are missed from being paid, including pay transactions relating to historic calendar periods. It is recommended to run this report post the pay batch status being “Payment File Released”.

Payee Leave Accruals

This report provides details of all payee leave accruals based on payee aggregates with a payee leave rule. It provides a full history of all accruals therefore it can be monitored if there have been changes to a rate of accrual. This would be most useful if run when reviews of payee leave balances are required, or any review against the GL for accruals. It is recommended that this is run post the pay batch

status being "Payment File Released", or as part of end of month or specific leave accrual reviews.

Payee Leave Balance Movement

This report provides a full comprehensive review of all payee aggregates relating to each payee leave rule, including the starting balance, leave accrued, leave credited, leave cashed out, leave taken, and leave closing balance for each payee aggregate. It is recommended that this is run when a reconciliation needs to occur for a payee on their current leave balance.

Payees without PAYG Tax Details

This report will list all Payees who do not have PAYG payee withholding records. It will still list those payees who are an earner type of Pty/Ltd or subcontractor who will have their GST withholding already created, but can be used as an extra verification step if required. Ideally this report would be run prior to the creation of the pay batch, to ensure any PAYG calculations will be considered during the first calculation for all payees.

Payees without Payment Details

This report will list all payees who do not have payment details. Ideally, this report should be run prior to the pay batch creation, to ensure all included can proceed to the "Payment File Released" stage.

Payees without Payroll Tax Details

This report will list all payees who do not have a payroll tax withholding record. If users are wanting to use the payroll tax lodgements as part of the lodgements package, it requires payees to have a payroll tax withholding prior to the pay batch being finalised. It is recommended that this would be run prior to the pay batch creation

Payees without Superannuation Details

This report will list all payees who do not have superannuation withholding records. It will still list those payees who are an earner type of Pty/Ltd or subcontractor who have their GST withholding already created, but can be used as an extra verification step if required. Ideally this report would be run prior to the creation of the pay batch, to ensure any superannuation calculations will be considered during the first calculation for all Payees.

PAYG Transactions Report

This report provides a detailed list of all deduction pay transactions processed, grouped by payee per pay batch. This would be suitable for payroll/finance users to cross check the required PAYG payments to be made to the ATO, and to validate against the STP reporting. It is recommended that this is run either when creating an STP file, or when creating the external payment file for PAYG payments.

Payroll Detail Report

This report is intended to provide users with a comprehensive view of all pay transactions included in a pay batch, including allowances, payments, deductions,

withholdings, leave accruals, leave events, etc. This report is suitable to be run after the pay batch calculated stage.

Payroll Register Report

This report is intended to provide users with a summary level review of the pay batch at a payee pay batch level. Users would find this report useful either during or after the pay batch calculation stage, or even at the end of the week to detail all pay batches processed for the week.

STP Employee Data Checking Report

This report details employee profile information including address, birthdate, gender, and phone details, to confirm all of the data is compliant with the ATO address guidelines and superstream formats for their super funds. It's encouraged to always be run prior to any STP or superstream lodgements being created.

Superannuation Pay Transactions Review

This report details all superannuation withholding or deduction pay transactions that have a related superannuation fund detailed on them, that have been created in the last month. The report provides the breakdown of pre or post tax deductions as well as those that are the SGC contributions. Users would find this report useful to reconcile against the SuperStream Lodgements.

Invoicing

Clients with/without Invoice Settings

This report will list all clients who currently don't have any invoice settings created, which would prevent them from having pay transactions updated with the invoicing fields in preparation for the creation of invoices. It is recommended this report is run weekly to ensure data integrity doesn't prevent timesheets from having pay transactions create or prevent creation of client invoices.

Fees Invoices Report

This report provides a full list of all "Invoiceable Fees" invoices created with related detail. Users are recommended to apply filters to this report as required to specify those created in the week/fortnight/month. This report should be run after the invoices have been created and when the business requires reporting to be provided on them.

Invoices without Invoice Contacts

This report will show any invoices created without an invoice contact specified. These need to be resolved so the invoice can be emailed to the client using the email address of the invoice contact. Users are recommended to run this report after the completion of their invoices being generated.

Outstanding Fees Invoices

This report will provide a full list of invoiceable fee pay transactions that have not yet been invoiced. It is recommended to run this prior to creation of "Invoiceable Fee" invoices to confirm what should be created, and more importantly after you

have completed creating invoices to review what pay transactions remain outstanding to be invoiced.

Outstanding Temp Invoices

This report will provide a full list of pay transactions relating to temp assignments that have not yet been invoiced. It is recommended to run this prior to creation of invoices to confirm what should be created, and more importantly after you have completed creating invoices to review which pay transactions remain outstanding to be invoiced.

Temp Invoices Report

This report provides a full list of all temp invoices created with related details. Users are recommended to apply filters to this report as required to specify those created in the week/fortnight/month. This report should be run after the invoices have been created and when the business requires reporting to be provided on them.
