

Purpose

The purpose of this Administrator Guide is to provide information about Additional Details using Field Sets. The content in this guide is optional, and may be utilised during implementation, or even after a project has gone live. The intended audience for this document is System Administrators.

Additional Details using Field Sets

Overview

Field Sets provide a mechanism to group and manage a collection of fields, often for dynamic rendering or data input. System Administrators can add, remove, or reorder fields in a Field Set to modify them on a Visualforce Page without modifying code.

Within limited objects, 2cloudnine Payroll has the ability to assist System Administrators with providing extra fields to display, or additional fields to act as extra filters during some processes, without the need for Custom Pages to be built. By utilising Field Sets, System Administrators are able to easily add fields to assist with these needs. 2cloudnine has the following Field Sets available:

- Rate Calculator Field Sets
- Invoice Generation Manager Field Sets
- Variation Report Field Sets
- Interpretation Rule Builder Field Sets

Rate Calculator Field Sets

The Rate Calculator object includes 2 Field Sets, which can display additional fields within the Rate Calculator UI screen and can be updated as required. Follow the steps below to update the Field Set (see Figure 1):

Rate Calculation Manager

Go to **Setup > Object Manager > Rate Calculator**

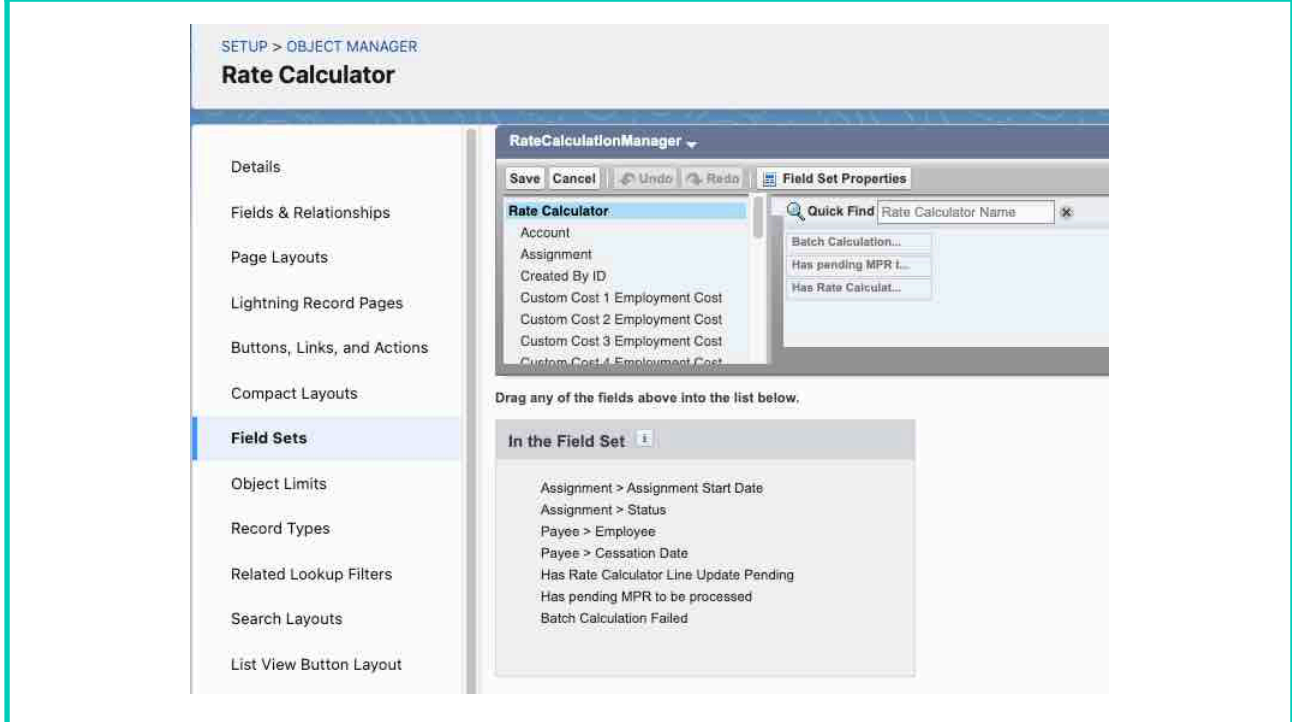

1. Select **Field Sets**.
2. At **RateCalculationManager**, select the down arrow in the far right and select **Edit**.
3. Select the required Object listed in the Field Set tree menu, which will then display available fields within that Object.
4. Select the field you want included and drop it into the box below, labelled **In the Field Set**.
5. Repeat for all additional fields required to be added to the RateCalculationManager Field Set.
6. When finished, click **Save**.

Employee Details

Go to **Setup > Object Manager > Rate Calculator**

1. Select **Field Sets**.
2. At **Employee Details** select the down arrow in the far right and select **Edit**.
3. Select the required Object listed in the Field Set tree menu, which will then display available fields within that Object.
4. Select the field you want included and drop it into the box below, labelled **In the Field Set**.
5. Repeat for all additional fields required to be added to the Employee Details Field Set.
6. When finished, click **Save**.

Figure 1

Invoice Generation Manager Field Sets

The Pay Transactions object includes a Field Set that can be modified to include additional Custom Filters on Pay Transactions when using the Invoice Generation Manager page. To update the Field Set:

Go to **Setup > Object Manager > Pay Transaction**

1. Select **Field Sets**.
2. At **ProcessInvoice**, select the down arrow in the far right and select **Edit**.
3. Select the required Object listed in the Field Set tree menu, which will then display available fields within that Object.
4. Select the field you want included and drop it into the box below, labelled **In the Field Set**.
5. Repeat for all additional fields required to be added to the ProcessInvoice Field Set.
6. When finished, click **Save**.

Variation Report Field Sets

The Payee Pay Batch object includes a Field Set that can be modified to include additional columns to display in the Variation Report available within the Pay Batch Manager. To update the Field Set:

Go to **Setup > Object Manager > Payee Pay Batch**

1. Select **Field Sets**.
2. At **Variation Report Display**, select the down arrow in the far right and select **Edit**.
3. Select the required Object listed in the Field Set tree menu, which will then display available fields within that Object.
4. Select the field you want included and drop it into the box below, labelled **In the Field Set**.
5. Repeat for all additional fields to be added to the Variation Report Display Field Set.
6. When finished, click **Save**.

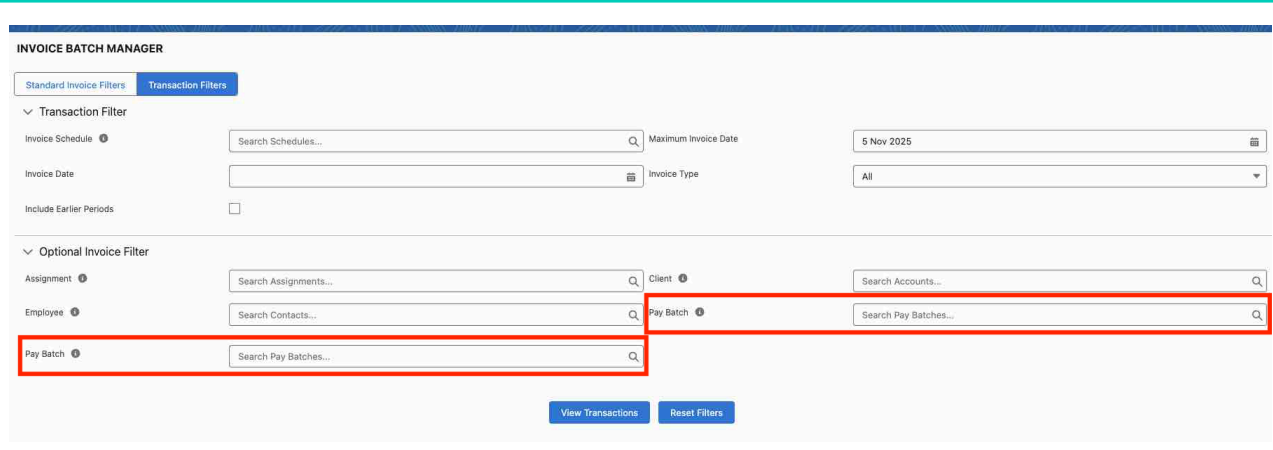

Interpretation Rule Builder Field Sets

The Interpretation Rule object includes a Field Set that can be modified to include additional fields to display in the Interpretation Rule Builder page. To update the Field Set:

Go to **Setup > Object Manager > Interpretation Rule**

1. Select **Field Sets**.
2. At **Interpretation Rule Config Pg Custom**, select the down arrow in the far right and select **Edit**.
3. Select the required Object listed in the Field Set tree menu, which will then display available fields within that Object.
4. Select the field you want included and drop it into the box below, labelled **In the Field Set**.
5. Repeat for all additional fields to be added to the Interpretation Rule Builder Field Set.
6. When finished, click **Save**.

Figure 2

The screenshot shows the 'INVOICE BATCH MANAGER' interface. It has two tabs: 'Standard Invoice Filters' and 'Transaction Filters'. Under 'Transaction Filters', there is a 'Transaction Filter' section with fields for 'Invoice Schedule', 'Invoice Date', 'Include Earlier Periods', 'Maximum Invoice Date', and 'Invoice Type'. Below this is an 'Optional Invoice Filter' section with fields for 'Assignment', 'Employee', 'Pay Batch', 'Client', and 'Search Accounts...'. A red box highlights the 'Pay Batch' field in the 'Optional Invoice Filter' section, which is being added to the 'In the Field Set' box. At the bottom, there are 'View Transactions' and 'Reset Filters' buttons.

Important Notes

(Figure 2)

Users must ensure no fields are added to a Field Set that are already displayed by default on the page or within the UI. If the same field appears on the page twice, and the Standard page field is populated but the Field Set field is blank, the blank field will override the Standard field.
