

Purpose

The purpose of this Administrator Guide is to provide information about packaged Workflow Rules. The content in this guide is optional, and may be utilised during implementation, or even after a project has gone live. The intended audience for this document is System Administrators.

2cloudnine Workflow Rules

Overview

Workflow Rules are automation features contained within the 2cloudnine Payroll Package that perform predefined actions when specific conditions are met, such as updating a record, sending an email alert, or creating a Task. They are triggered by changes to a record and help enforce business processes, improve efficiency, and reduce manual effort by automating repetitive tasks.

Despite Salesforce announcing they will not be supporting Workflow Rules after December 31, 2025, packaged Workflow Rules, such as the six mentioned below, will continue to work as needed when activated/deactivated.

After installation of the packages, Users are reminded to review these Workflow Rules and determine if they need to turn on or off the Workflow Rule compared to how it is defaulted.

Populate Alternative Invoice No

This Workflow Rule only needs to be activated if there is a need for an alternative Invoice Number to be populated, instead of the standard 2cloudnine Invoice numbering used by default within 2cloudnine Payroll. It also replaces the INV in the name with CN for Credit Notes.

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Activate** next to the Workflow **Populate Alternative Invoice No**.

Populate Payee Payroll Id

This Workflow Rule can be deactivated if there is a need for the Payroll Ids to use a different format from the standard Payroll Ids used by default within 2cloudnine Payroll. The Workflow rule is Active by default, but when turned off, it enables the Payroll Id detailed on the Payee record by integration, dataload, or manual entry to be used:

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Deactivate** next to the **Populate Payee Payroll Id** Workflow.

STP Email - ATO Error

This Workflow Rule sends an email when an STP Lodgement Record can not be processed by the ATO.

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Deactivate** next to the **STP Email - ATO Error** Workflow.

STP Email - Cancelled by ATO

This Workflow Rule sends an email when an STP Lodgement Record has been cancelled by the ATO.

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Deactivate** next to the **STP Email - Cancelled by ATO** Workflow.

STP Email - Processed by ATO

This Workflow Rule sends an email when an STP Lodgement Record has been successfully processed by the ATO.

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Deactivate** next to the **STP Email - Processed by ATO** Workflow.

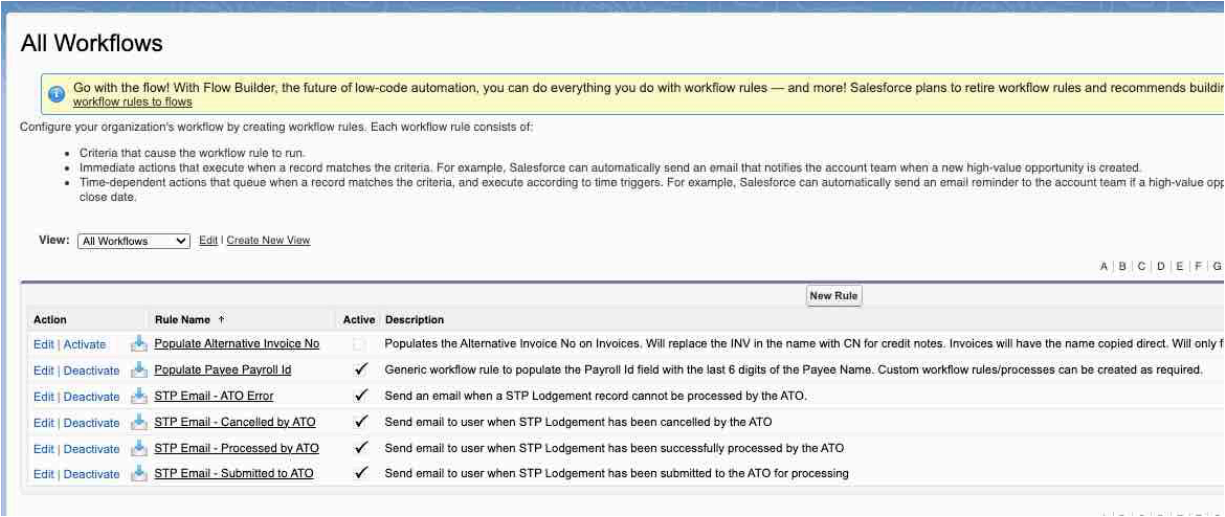

STP Email - Submitted to ATO

This Workflow Rule sends an email when an STP Lodgement Record has been submitted to the ATO for processing.

Go to **Setup > Process Automation > Workflow Rules**

1. Select **Deactivate** next to the **STP Email - Submitted to ATO** Workflow.

All Workflows

Go with the flow! With Flow Builder, the future of low-code automation, you can do everything you do with workflow rules — and more! Salesforce plans to retire workflow rules and recommends building workflow rules to flows.

Configure your organization's workflow by creating workflow rules. Each workflow rule consists of:

- Criteria that cause the workflow rule to run.
- Immediate actions that execute when a record matches the criteria. For example, Salesforce can automatically send an email that notifies the account team when a new high-value opportunity is created.
- Time-dependent actions that queue when a record matches the criteria, and execute according to time triggers. For example, Salesforce can automatically send an email reminder to the account team if a high-value opportunity close date.

View: All Workflows Edit Create New View

Action	Rule Name	Active	Description
Edit Activate	Populate Alternative Invoice No	☐	Populates the Alternative Invoice No on Invoices. Will replace the INV in the name with CN for credit notes. Invoices will have the name copied direct. Will only f
Edit Deactivate	Populate Payee Payroll Id	☒	Generic workflow rule to populate the Payroll Id field with the last 6 digits of the Payee Name. Custom workflow rules/processes can be created as required.
Edit Deactivate	STP Email - ATO Error	☒	Send an email when a STP Lodgement record cannot be processed by the ATO.
Edit Deactivate	STP Email - Cancelled by ATO	☒	Send email to user when STP Lodgement has been cancelled by the ATO
Edit Deactivate	STP Email - Processed by ATO	☒	Send email to user when STP Lodgement has been successfully processed by the ATO
Edit Deactivate	STP Email - Submitted to ATO	☒	Send email to user when STP Lodgement has been submitted to the ATO for processing
