

Below is a high-level outline of our approach to implementing the Calytrix release.

1. Questionnaire

2cloudnine will send you a questionnaire focused on gathering information about your organisation's payroll(s) and workforce. The data provided will be used to help us put together a tailored implementation plan specific to your business needs.

2. Liaison

2cloudnine will contact you about your organisation's tailored implementation plan and discuss the following steps. We will lock in dates for the first install and configuration to occur.

3. First Install and Configuration

2cloudnine will complete the first install which relates specifically to providing fields and triggers etc that are needed for STP2. At this point, there will be no changes to the STP Manager and how it works, so you can continue to make STP1 lodgments as you have been.

4. Update of Data Phase 1

You will complete an update of data for your source records, such as Pay Code, Payee and Payee Withholding, to provide the information that is needed for STP2. At this stage, we will provide you with QRGs that outline what you need to do as well as tools which will help you to complete it.

5. Update Of Data Phase 2

2cloudnine will update the remaining data that is needed to be correct for STP2. This includes the various Payroll records and Pay Aggregates which have to be historically updated for any payrolls that you have completed this financial year.

6. Check In

2cloudnine will check in with you to make sure all the data is correct and that you're ready to move forward in switching to STP2. At this point, we will share with you updated QRG's on the STP Manager and how to report to the ATO. If you confirm that it's OK to go ahead, we will schedule your Second Install.

7. Second Install and Configuration

2cloudnine will complete the second install which updates the STP Manager and its functionality. This step needs to happen while no Payrun or STP Reporting is in progress.

8. First STP2 Payrun

You will complete your first STP2 Payroll and subsequent STP reporting. Throughout this process we will ensure that you have any support that you require.
