

Purpose

The purpose of this quick reference guide is to step through the process of creating a Rate Calculator Template. The intended audience for this document is System Administrators / Standard Users.

Rate Calculator Templates are the parent records that can be applied to Assignments to make Employee-specific Rate Calculators. They contain details, such as Employment Costs, Pay Codes, Pay Rate Loadings, and Margin/Markup records. Rate Calculator Templates have been designed with flexibility in mind. This means they can contain either minimal information or detailed information to meet your business requirements.

Steps

Create a Rate Calculator Template

To create a Rate Calculator Template, follow the steps below:

1. Click on the **App Launcher** icon (see Figure 1).
2. Go to the **Rate Calculators** object by using the Search function (see Figure 2).

Figure 1

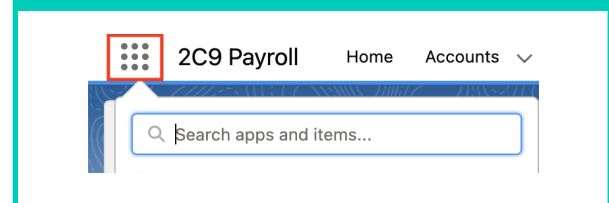

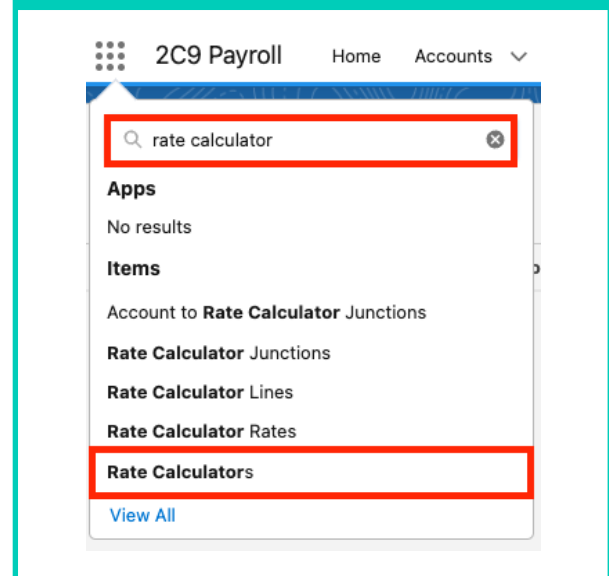

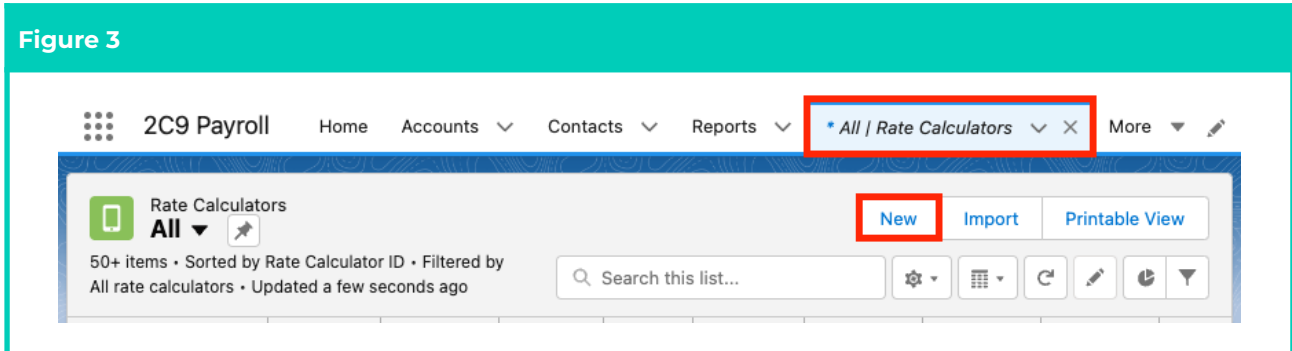

Figure 2

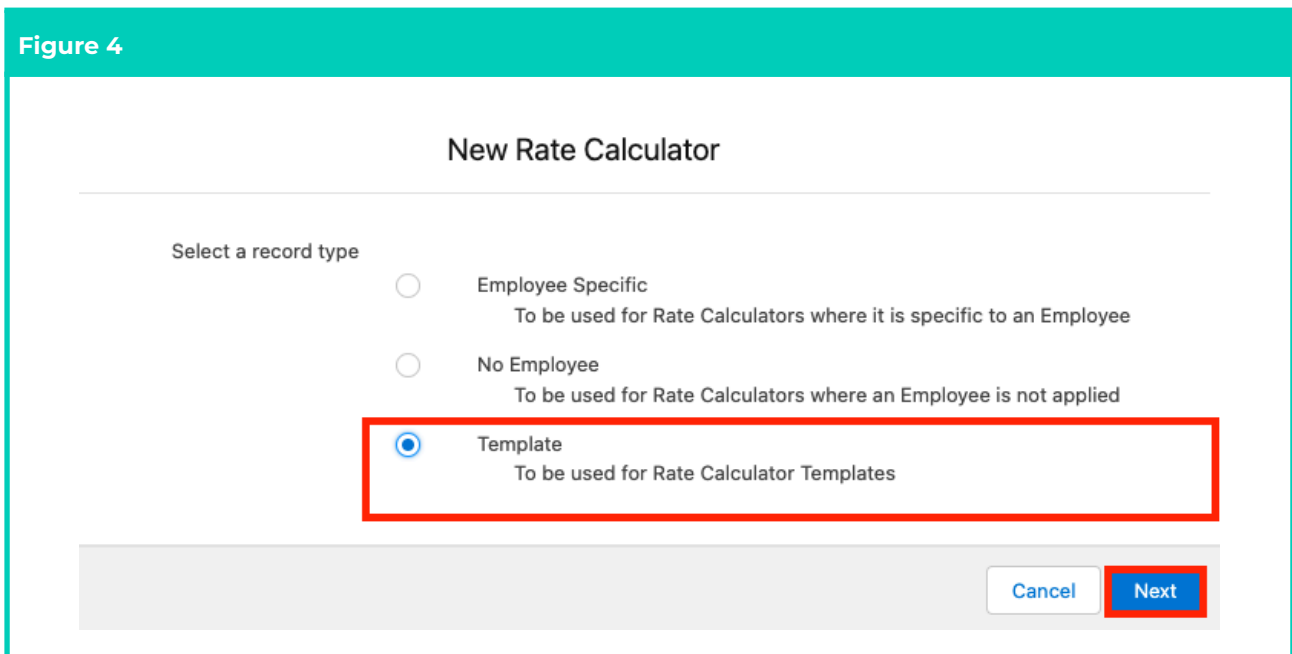

3. Click on the **New** button (see Figure 3).

Figure 3

4. Select **Template** from the available record types and click on the **Next** button (see Figure 4).

Figure 4

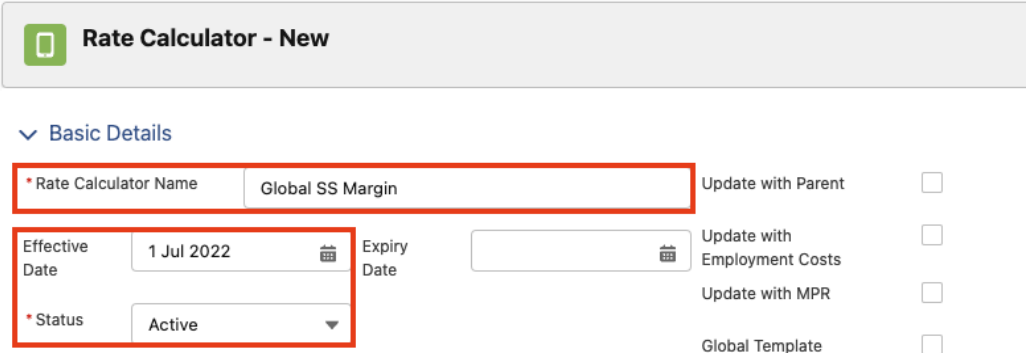

Initial Details

This section provides basic information and optional configuration options related to the setup of the Rate Calculator Template.

5. Populate the following required fields to provide the base details of the Rate Calculator Template (see Figure 5):
 - a. **Rate Calculator Name**
 - b. **Effective Date**
 - c. **Status**
6. Populate the following optional fields as required (see Figure 5):
 - a. To define an Expiry Date for the Template record, populate the **Expiry Date** field. The expiry of a Rate Calculator Template won't affect any child records created via Template automation, unless they have inherited the same Expiry Date.
 - b. To allow changes made to the Mark Up / Margin and Pay Rates associated with this No Employee Rate Calculator to automatically update related Rate Calculator records created via system automation, select the **Update with Parent** checkbox.

- c. To automatically create new Rate Calculator Lines when changes are made to a related Employment Cost, or a new Employment Cost is activated, select the **Update with Employment Costs** checkbox. This will also trigger automatic Assignment Rate updates for all related items.
- d. To allow related Minimum Pay Rate records to automatically create and update the Rate Calculator Rate records associated with this No Employee Rate Calculator, select the **Update with MPR** checkbox.
- e. To allow the No Employee Rate Calculator to be related to any Assignment regardless of whether the same related Client or Payment Entity records are present, check the **Global Template** checkbox.

Figure 5

Rate Calculator - New

▼ Basic Details

* Rate Calculator Name: Global SS Margin ☐ Update with Parent

Effective Date: 1 Jul 2022 ☐ Expiry Date: ☐ Update with Employment Costs

* Status: Active ☐ Update with MPR

☐ Global Template

Important Notes

(Figure 5)

When the Update with Employment Costs field is enabled, changes made to an Employment Cost Item will automatically generate updated Rate Calculator Lines and trigger automatic Assignment Rate updates for all related items.

7. Populate the following optional fields as required (see Figure 6):
 - a. To allow automatic creation of additional Rate Calculator lines when Project Codes are applied to the No Employee Rate Calculator, select the **Enable Project Codes** checkbox.
 - b. To enable an individual Mark Up / Margin to be defined against each Pay Code related to the No Employee Rate Calculator, select the **Define Markup Margin Per Pay Code** checkbox. If unchecked, a single Mark Up/ Margin will be applied for all Pay Codes related to a Rate Calculator, regardless of their record type.
 - c. To apply an Award Classification for use with Minimum Pay Rates, populate the **Award Classification** field using the lookup options available.
 - d. To apply an Award Level for use with Minimum Pay Rates, populate the **Award Level** field using the lookup options available.
 - e. To apply a Minimum Pay Rate Template to this record, populate the **Minimum Pay Rate Template** field.

Figure 6

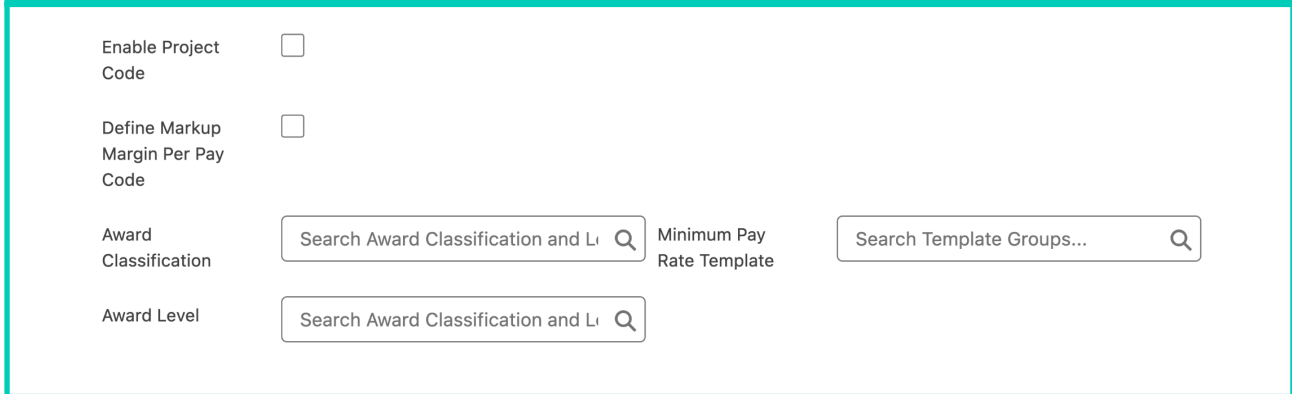

Figure 6 shows the initial setup form for the Rate Calculator Template. It includes the following fields:

- Enable Project Code: ☐
- Define Markup Margin Per Pay Code: ☐
- Award Classification: Search Award Classification and L...
- Award Level: Search Award Classification and L...
- Minimum Pay Rate Template: Search Template Groups...

Important Notes

(Figure 6)

The Define Markup Margin Per Pay Code field is only available during record creation, and will not be available for selection once the record is initially saved.

Adding Employment Costs to the Template

This section of the Rate Calculator is used to determine Employment Costs that will apply to the Rate Calculator Template. When calculating lines, Rate Calculator will use these fields to look up the applicable Employment Cost Items to determine the payable and invoiceable calculation types and amounts.

8. To apply Employment Costs to the Rate Calculator Template, populate the following optional fields as required:
 - a. Click on the + button next to the Employment Cost option (see Figure 7)
 - b. Click on the **Select** button of the suitable Employment Cost from either Client Enabled or Globally Enabled sections (see Figure 8)

Figure 7

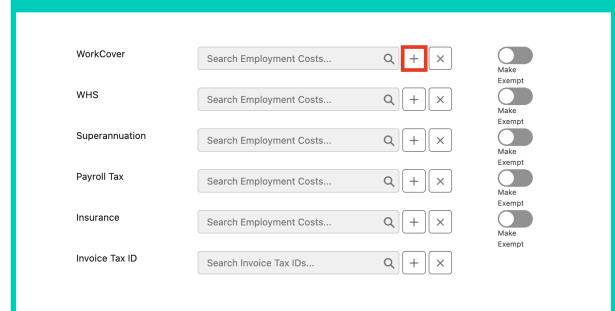

Figure 7 shows the Employment Costs form. It includes the following fields:

- WorkCover: Search Employment Costs... +
- WHS: Search Employment Costs... +
- Superannuation: Search Employment Costs... +
- Payroll Tax: Search Employment Costs... +
- Insurance: Search Employment Costs... +
- Invoice Tax ID: Search Invoice Tax IDs... +

On the right side, there are toggle switches for 'Make Exempt' for each category.

Figure 8

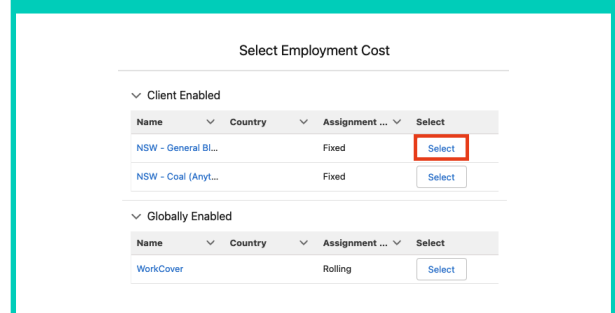

Figure 8 shows the 'Select Employment Cost' form. It includes the following sections:

- Client Enabled**

Name	Country	Assignment ...	Select
NSW - General BL...		Fixed	Select
NSW - Coal (Anyt...		Fixed	Select
- Globally Enabled**

Name	Country	Assignment ...	Select
WorkCover		Rolling	Select

- c. To remove an Employment Cost from the Rate Calculator Template:
 - i. Click on the **x** button next to the populated Employment Cost to remove the selection from the Rate Calculator Template (see Figure 9).
 - ii. If required, click on the **Make Exempt** toggle bar to indicate this Record Type of Employment Cost is not required (see Figure 9).

Figure 9

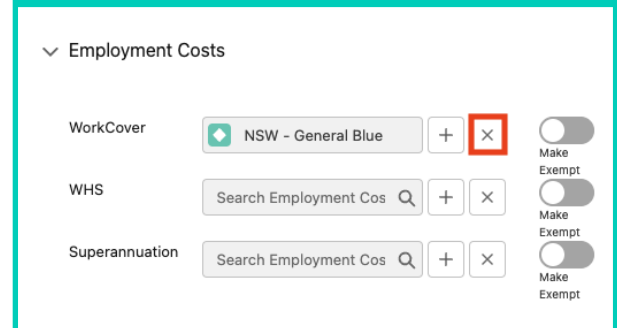

Figure 9 shows the 'Employment Costs' section of the template. It includes three rows: WorkCover, WHS, and Superannuation. Each row has a search bar, a '+' button, an 'x' button (highlighted with a red box), and a 'Make Exempt' toggle switch.

Adding Location, Industry, and Risk Classification to the Template

Templates provide Users with a level of flexibility with regard to defining a Location, Industry, and Risk Classification. As Templates are designed to be truly global, these fields can be left blank on the Template and instead have the values default from the Assignment when applying the Template.

9. To select the Employment Costs applied to this Rate Calculator Template, populate the following optional fields as required (see Figure 10):
 - a. To define a Location for the Employment Costs detailed on this Rate Calculator Template, populate the **Location** lookup field.
 - b. To define an Industry for the Employment Costs detailed on this Rate Calculator Template, populate the **Industry** field using the picklist options available.
 - c. To define a Risk Classification for the Employment Costs detailed on this Rate Calculator Template, populate the **Risk Classification** field using the picklist options available.

Figure 10

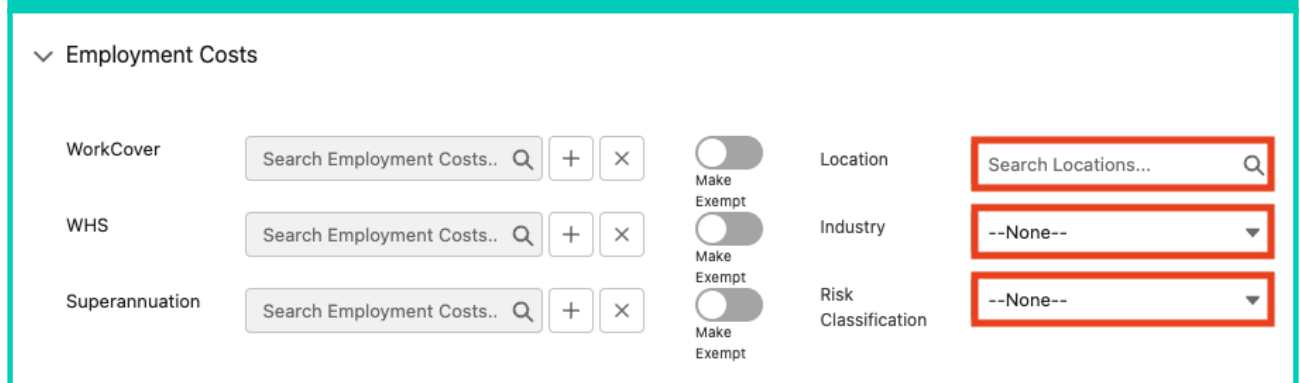

Figure 10 shows the 'Employment Costs' section of the template. It includes three rows: WorkCover, WHS, and Superannuation. Each row has a search bar, a '+' button, an 'x' button, and a 'Make Exempt' toggle switch. Additionally, there are three fields on the right: Location (a search bar), Industry (a picklist with '--None--' selected), and Risk Classification (a picklist with '--None--' selected). The Location, Industry, and Risk Classification fields are highlighted with red boxes.

Important Notes

(Figure 10)

If the Location, Industry, Risk Classification, Expiry Date, or Pay Code fields are not populated within the Rate Calculator Template, they will need to be manually entered in the Rate Calculators created from this Rate Calculator Template, or will need to be inherited from the related Assignment record. Rate Calculator Lines will not be generated unless each of these fields has been defined.

Adding Interpretation Rules and Pay Codes

The following section allows adding Interpretation Rules and Pay Codes to the Rate Calculator Template for the creation of Rate Calculator Lines.

10. To define the Interpretation Rules, so the Rate Calculator Lines will be created for the related Pay Codes, select the **Interpretation Rule(s)** from the **Available** picklist and click the > button to move them to the **Selected** column (see Figure 11).
11. To define Pay Codes in addition to those in the defined Interpretation Rules, select the **Pay Code(s)** from the **Available** picklist, and click the > button to move them to the **Selected** column (see Figure 11).

Figure 11

▼ Manage Pay and Project Codes

Interpretation Rule		Pay Code	
Available	Selected	Available	Selected
ACA - PERM Shift Residential ... Clerks 76/10 7am-7pm Clerks Int - Weekly (demo) Daily training session - Weekly Daily - Bi-Monthly Daily - Fortnightly Daily - Fortnightly Clone	► Clerks Modern Award 38/10 Hourly ► Clerks Modern Award Standard ... ◀ Weekly Clerks 38/10 7am-7pm	Afternoon Shift Allowance Pay Code Example Annual Leave Cash Out Bonus (OTE) Cash Out Purchased Leave Casual Loading 25% Child Support	► Penalty x 1.25 ► Personal Leave ◀ Public Holiday NW ◀ Public Holiday x 2.50 Unpaid Leave Car Allowance Union Fees

Important Notes

(Figure 11)

After Interpretation Rules are selected and the Rate Calculator Template is saved, all Pay Codes related to the Interpretation Rule will be added. If any of these Pay Codes need to be removed, this can only be done by removing the Interpretation Rule. This ensures Assignment Rates are created for each required Pay Code.

12. Click on the **Save** button (see Figure 12).

14. Once completed, you will still need to complete the Final Setup of the Rate Calculator Template by adding or excluding Project Codes, Mark Up / Margin record, Pay Rates, Pay Rate Loadings, and Calculating and Updating Rate Calculator Lines. To learn more about these, please refer to the QRG Create Rate Calculators - Final Setup.

Important Notes

(Figure 13)

If Mark Up / Margin Rates are not added to the Rate Calculator Template, they must be manually added to each Rate Calculator record created using Template automation. Rate Calculator Lines cannot be generated unless a Mark Up / Margin Rate has been defined.

No Employee Record Type

The 'No Employee' record type has the same functionality as a Template, with the two record types able to be used interchangeably. They are typically used in front office systems where Rate Calculators are assigned to objects such as a 'Job'. Using the 'No Employee' Record Type provides a clear distinction between Templates that are not assigned to a specific Job or Assignment and those that are.

Please note that the No Employee Record Type is no longer supported by the Product Team and is in the process of being archived.

Rate Calc Template Parent

Where an Org utilises multiple Account records for the same Client, such as a different Client record per state, it can become difficult to manage the assigning of Templates. To help solve this problem, a field 'Rate Calc Template Parent' is available on the Account object.

When applying a Rate Calculator Template to an Assignment, any Rate Calculator Templates assigned to the Assignment > Client > Rate Calc Template Parent will also be available.

Exclude Global Templates for Clients

Certain Clients can be excluded from having access to Global Rate Calculator Templates when applying a Template to the Assignment. This can ensure Users only have access to those specific to the Client or Payment Entity.

To exclude a Client from accessing Global Templates.

1. Go to the Client record you wish to exclude.
2. Check the option **Exclude Global Rate Calc Templates?**.

Field Descriptions

Field Name	Description
Award Classification	Defines the Award Classification of the Rate Calculator Template.
Award Level	Defines the Award Level of the Rate Calculator Template.
Define Markup Margin Per Pay Code	Enables the selection of different Mark Up / Margins for each Pay Code.
Effective Date	Defines the Effective Date of the Rate Calculator Template.
Enable Project Code	Indicates whether Project Codes may be applied to the Rate Calculator Template.
Expiry Date	Defines the Expiry Date of the Rate Calculator Template. If blank, no Expiry Date applies.
Global Template	Indicates whether a Rate Calculator Template may be related to Assignments at a Global Level. If unchecked, the Rate Calculator Template will only be available to the related Client or Payment Entity.
Industry	Indicates the Industry that the Rate Calculator Template applies to.
Insurance	Defines the Insurance Employment Cost that applies to the Rate Calculator Template.
Interpretation Rule	Defines the Interpretation Rule that applies to the Rate Calculator Template.
Invoice Tax ID	Defines the Invoice Tax ID that applies to the Rate Calculator Template.
Location	Indicates the Location associated with the Rate Calculator Template.
Pay Code	Defines the Pay Code that will be used in the Assignment Rate to be created.
Payroll Tax	Defines the Payroll Tax Employment Cost that applies to the Rate Calculator Template.
Rate Calculator Name	Indicates the short name given to the Rate Calculator Template for identification.
Risk Classification	Indicates the Risk Classification associated with the Rate Calculator Template.
Status	Defines the Status of the Rate Calculator Template.
Superannuation	Defines the Superannuation Employment Cost that applies to the Rate Calculator Template.
Update with Employment Costs	Defines whether related Rate Calculator Lines will automatically calculate new lines when changes are made to a related Employment Costs.
Update with MPR	Identifies whether the Rate Calculator will automatically create and update associated Rates according to changes made within the related Minimum Pay Rate records.
Update with Parent	Identifies whether child Rate Calculator records will be automatically updated if the Parent Rate Calculator is updated.
WHS	Defines the WHS Employment Cost that applies to the Rate Calculator Template.
WorkCover	Defines the WorkCover Employment Cost that applies to the Rate Calculator Template.
