

Purpose

The purpose of this quick reference guide is to step through the process of creating a Locations record. The intended audience for this document is System Administrators / Standard Users.

The Locations record holds the location information that is used to filter and relate Employment Cost Item records.

Steps

Create a Locations record

To create a Locations record, the following steps should be completed:

1. Click on the **App Launcher** icon (see Figure 1).
2. Go to the **Locations** object by using the Search function (see Figure 2).

Figure 1

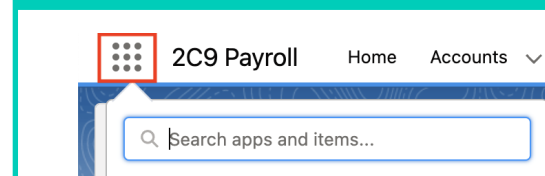

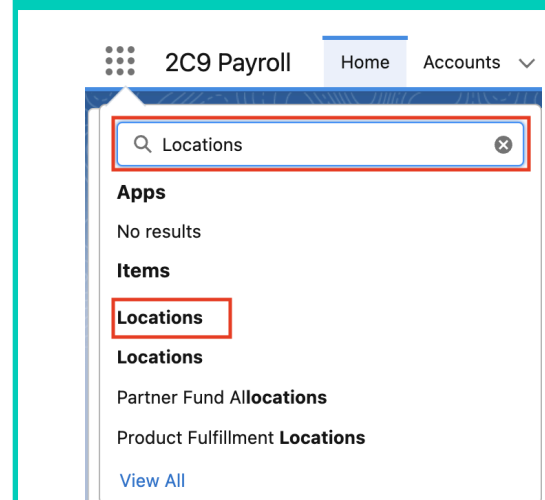

Figure 2

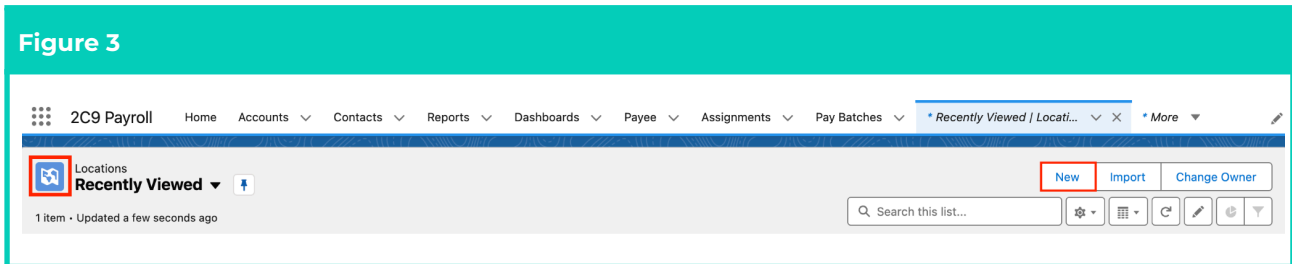

Important Notes

(Figure 2)

As there are currently two objects with the name 'Locations', please select the 'Locations' object represented with a blue map icon (see Figure 3). The other 'Locations' object is represented with a green map icon, and is a standard Salesforce object with no relation to Employment Costs or any other 2c9 Payroll functionality.

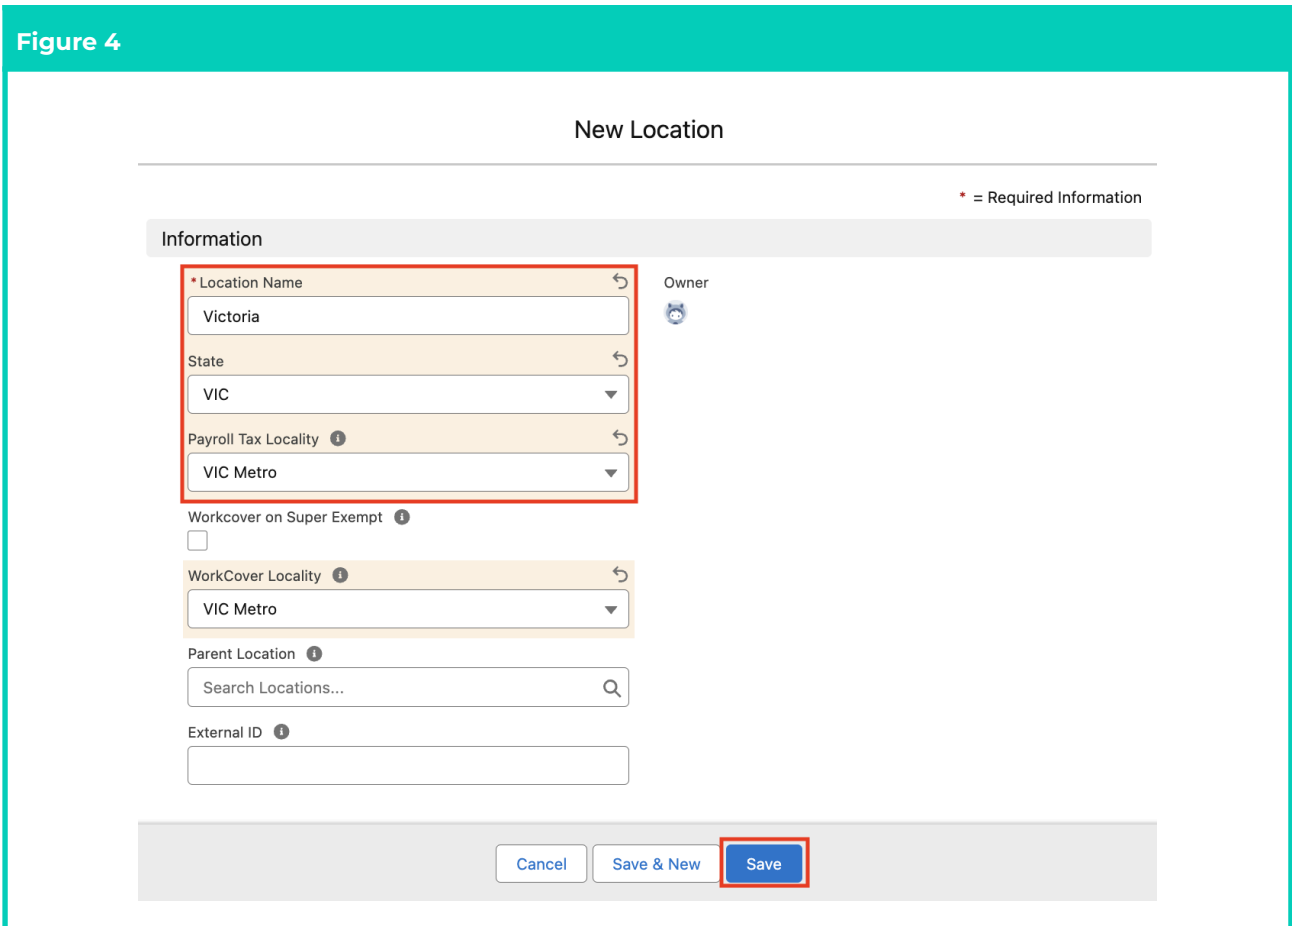

- Click on the **New** button (see Figure 3).

Figure 3

- Populate the following required fields to provide the base details for use within the General Ledger and the Rate Calculator (see Figure 4):
 - Location Name**
 - State**
- To apply an Australian Payroll Tax Locality to this Location, as used within General Ledger reporting and Rate Calculator calculations, populate the **Payroll Tax Locality** field.
- If WorkCover is exempt on Super for this Location, tick the **Workcover on Super Exempt** checkbox.
- To apply a WorkCover Locality to this Location, as used by the General Ledger reporting and Rate Calculator calculations, populate the **WorkCover Locality** field.
- To allow setting a hierarchy of locations, populate the **Parent Location** optional field.
- To integrate the Location record with an external system, populate the **External Id** optional field.
- Click on the **Save** button (see Figure 4).

Figure 4

The screenshot shows the 'New Location' form. It has a title 'New Location' and a legend indicating that an asterisk (*) denotes required information. The form is divided into sections: 'Information' and 'Owner'. The 'Information' section contains several fields: 'Location Name' (required, with a red box around it), 'State' (required, with a dropdown menu), 'Payroll Tax Locality' (required, with a dropdown menu), 'Workcover on Super Exempt' (checkbox), 'WorkCover Locality' (required, with a dropdown menu), 'Parent Location' (optional, with a search bar), and 'External ID' (optional). The 'Owner' section shows a user profile icon. At the bottom, there are three buttons: 'Cancel', 'Save & New', and 'Save' (highlighted with a red box).

Important Notes

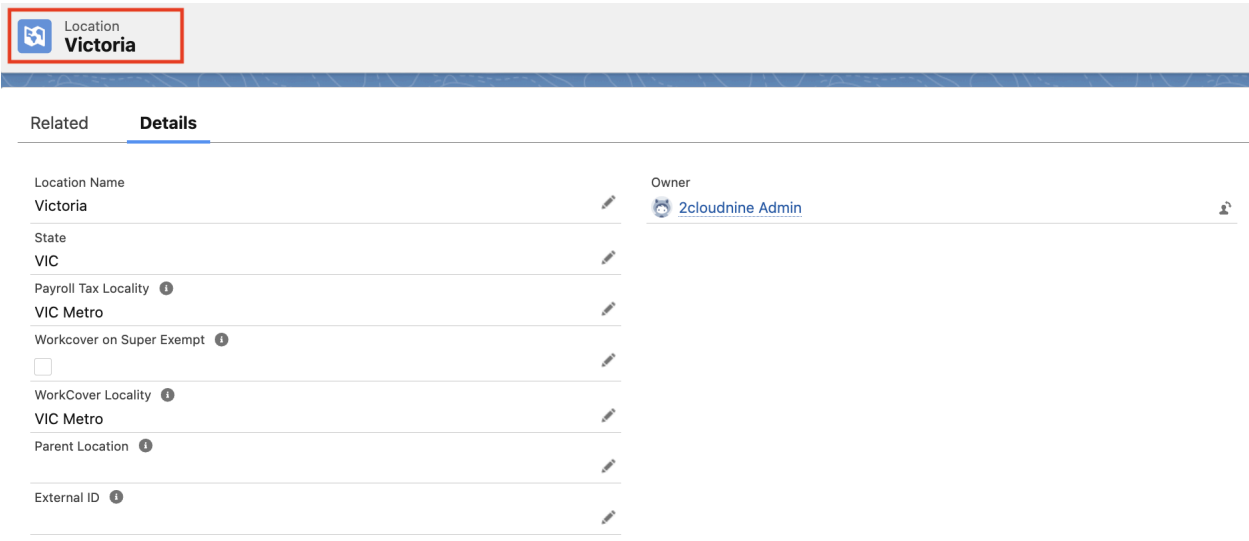

(Figure 4)

The Payroll Tax Locality and WorkCover Locality fields are not utilised as part of the Rate Calculator functionality. They are only utilised by the General Ledger package for calculating Workcover and Payroll Tax oncosts for each Pay Batch and subsequently referenced in Cost of Payroll Journals.

It is recommended to create a minimum of one Location record for each state, and also one Location record that can be used as a catch-all for every Location, such as All Locations or Any Location. These catch-all Location records can be used to populate other records where Location information is required to complete calculations, but should not be filtered to a single state.

11. A new **Locations** record is now created (see Figure 5).

Figure 5

Related	Details
Location Name	Victoria
State	VIC
Payroll Tax Locality	VIC Metro
Workcover on Super Exempt	☐
WorkCover Locality	VIC Metro
Parent Location	
External ID	

Owner: 2cloudnine Admin

Locations records **CAN NOT** be deleted if they have related records or are used in other records. Deleting records is not recommended unless absolutely essential.

12. To modify an existing **Location** record, open the required record and select the **Edit** button available on the top right side of the page. You can also double click within fields that need editing, or just click on the pencil icon that appears within fields when hovering with your cursor.
13. When complete, click on the **Save** button.

Field Descriptions

Field Name	Description
Location Name	indicates the full name given to the Location record for identification.
State	defines the Australian State or Territory that the Location exists within.
Payroll Tax Locality	defines the Australian Payroll Tax Locality that applies to the Location for Accounting reporting.
Workcover on Super Exempt	if selected, Workcover oncosts will not calculate on the related Superannuation Pay Transactions.
WorkCover Locality	defines the WorkCover Locality that applies to the Location for Accounting reporting.
Parent Location	is the Parent Location of the Location. Allows for a hierarchy Location setup if required.
External ID	defines the ID of the corresponding record in an external system that has been used to reference the record using integrations.
