

Purpose

The purpose of this quick reference guide is to step through the process of creating an Employment Cost record. Employment Cost records are used within Rate Calculators to define Employment Costs, as well as in the General Ledger, to create Pay Transaction Distribution records to report additional costs in the Payroll Journals, which can be reported within their Accounting software.

When used within a General Ledger, Employment Costs allow you to accurately record and measure your Payroll Tax and Workcover liability for each qualifying Pay Transaction. The intended audience for this document is System Administrators / Standard Users.

Steps

Create an Employment Cost record

To create an Employment Cost record, follow the steps below:

1. Click on the **App Launcher** icon (see Figure 1).
2. Go to the **Employment Costs** object by using the Search function (see Figure 2).

Figure 1

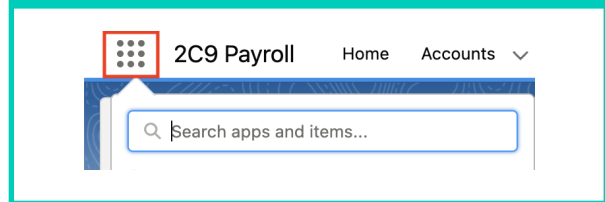

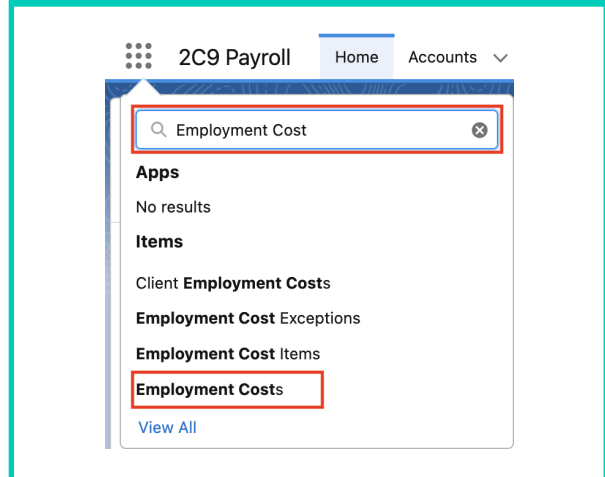

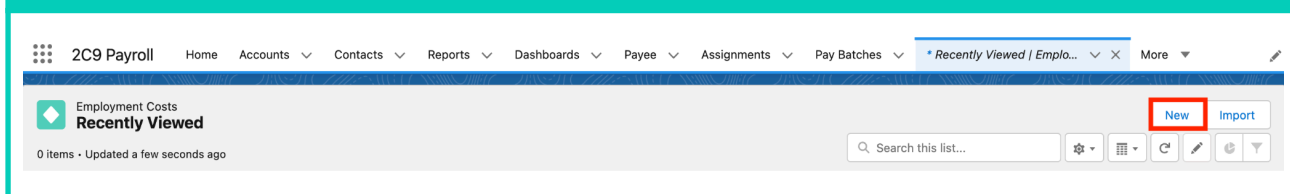

Figure 2

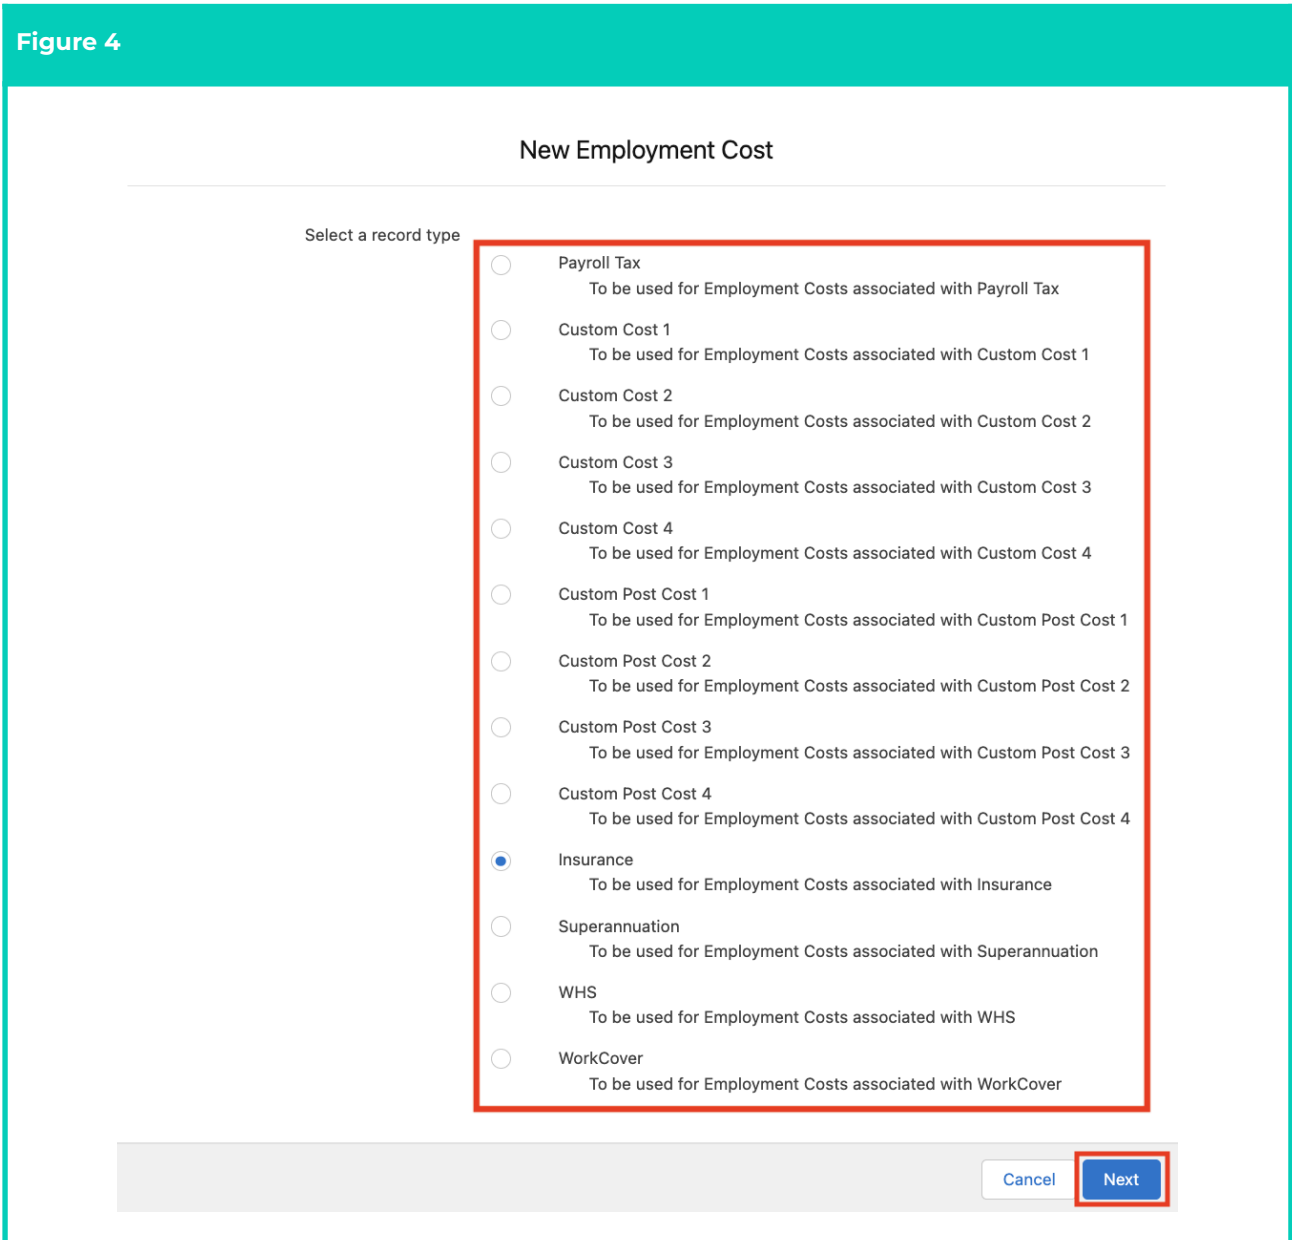

3. Click on the **New** button (see Figure 3).

Figure 3

4. Please choose one of the following and click on the **Next** button (see Figure 4):
- Follow steps 5 to 8 when you select one of the following Record Types:
 - Custom Cost 1, 2, 3, 4, Custom Post Cost 1, 2, 3, 4, Insurance, Superannuation, or WHS.
 - Follow steps 9 to 12 when you select one of the following Record Types:
 - Payroll Tax or WorkCover.

Figure 4

The screenshot shows a web form titled "New Employment Cost". Below the title is a section labeled "Select a record type" containing a list of radio buttons. The options are: Payroll Tax, Custom Cost 1, Custom Cost 2, Custom Cost 3, Custom Cost 4, Custom Post Cost 1, Custom Post Cost 2, Custom Post Cost 3, Custom Post Cost 4, Insurance (which is selected), Superannuation, WHS, and WorkCover. Each option has a descriptive line below it. At the bottom right of the form, there are two buttons: "Cancel" and "Next". The "Next" button is highlighted with a red border.

Important Notes

(Figure 4)

It is important to note that while all Record Types are relevant to the Rate Calculator functionality, only Payroll Tax and WorkCover Record Types are used for the General Ledger.

5. Populate the following required fields to provide the base details of the Employment Cost record (see Figure 5):
 - a. To define a unique identifier for the Employment Cost, populate the **Employment Cost Name** field.
 - b. To define how the Effective and Expiry Dates of a child Employment Cost Item will be applied to Rate Calculator Lines, populate the **Assignment Handling** field using the available picklist options:
 - When using Rate Calculator, to create separate Rate Calculator Lines for every Employment Cost Item within the effective period of the Rate Calculator, select **Rolling**.
 - When using Rate Calculator, to create Rate Calculator Lines for only the most recent Employment Cost Item, select **Fixed**.
 - c. To define the Location that is associated with this Employment Cost, populate the **Location** field using the lookup options available. In most scenarios, this field must be populated as **All**.
6. In most scenarios, Employment Costs are not client-specific and are used globally. The **Globally Enabled** checkbox is currently not in use, except for listing Employment Costs under the Globally Enabled list on a Rate Calculator.
7. Click on the Save button (see Figure 5).

Important Notes

(Figure 5)

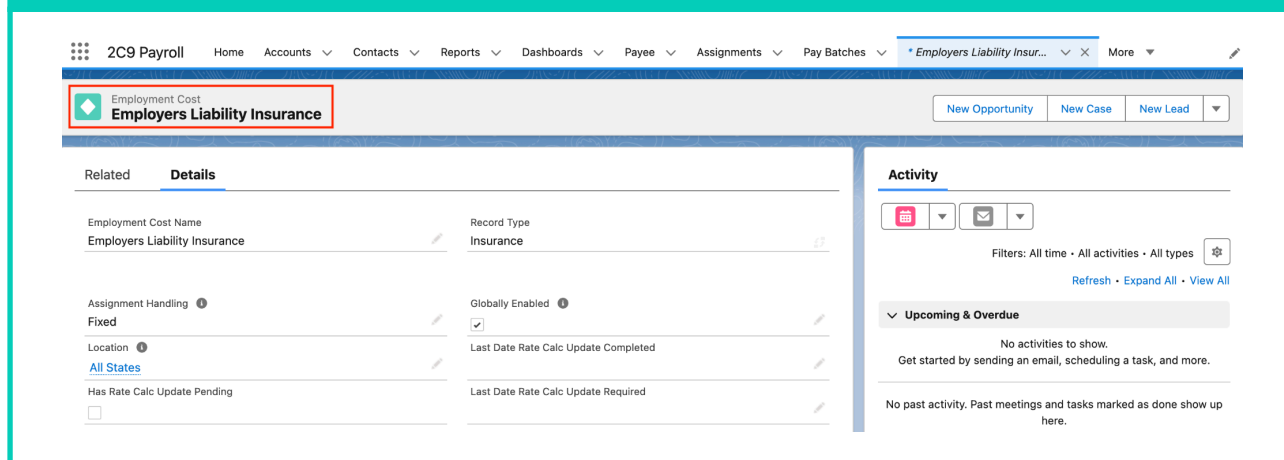

While one Employment Cost Item must be created for every Location record, individual Location records should NOT be populated for the parent Employment Cost. Instead, a single catch-all Location record, such as All Locations or Any Location, should be used within Rate Calculator Templates.

The Assignment Handling field should be set to Rolling in most cases, so that when Employment Cost Items are expired and replaced with new records, the changes are applied to all related Rate Calculators.

The Last Date Rate Calc Update Required and Last Date Rate Calc Update Completed fields are populated via system automation to reflect the status of Rate Calculator updates relating to the Employment Cost record. These fields should never be manually populated or overridden.

8. A new **Employment Cost** record is now created (see Figure 6).

Figure 6

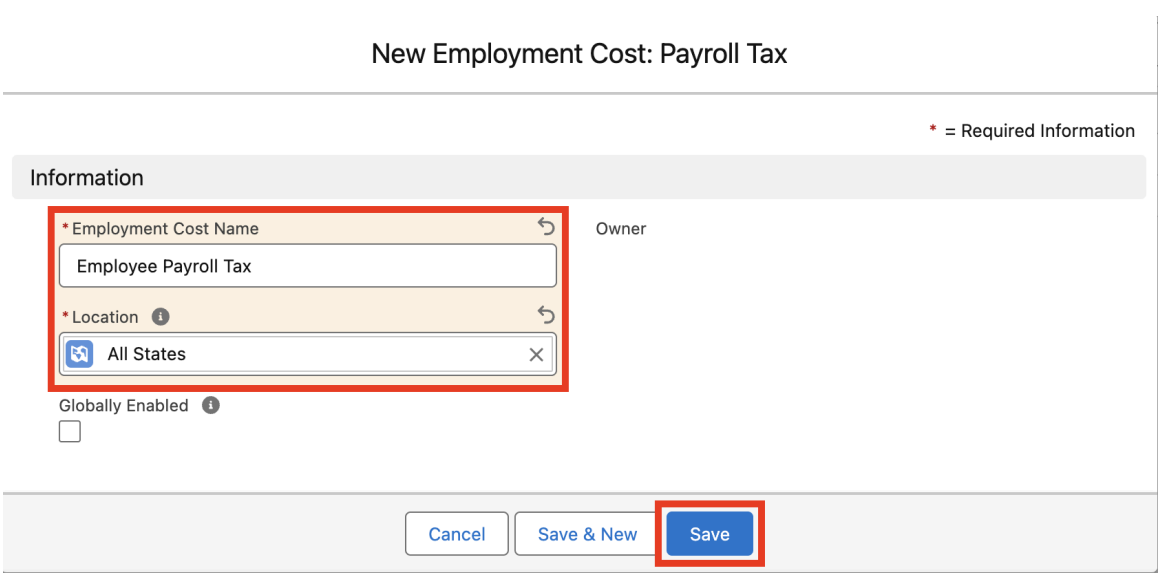

The screenshot displays the 'Employers Liability Insurance' record in the 2C9 Payroll system. The record is highlighted with a red box. The interface includes a navigation bar at the top with various menu items like Home, Accounts, Contacts, Reports, Dashboards, Payee, Assignments, Pay Batches, and a search bar. The record details are shown in a table format with fields for Employment Cost Name, Record Type, Assignment Handling, Location, Globally Enabled, Last Date Rate Calc Update Completed, and Last Date Rate Calc Update Required. The 'Employment Cost Name' field is set to 'Employers Liability Insurance' and the 'Record Type' is 'Insurance'. The 'Assignment Handling' is set to 'Fixed' and 'Globally Enabled' is checked. The 'Location' field is set to 'All States'. The 'Last Date Rate Calc Update Completed' and 'Last Date Rate Calc Update Required' fields are empty. The 'Has Rate Calc Update Pending' checkbox is unchecked. On the right side, there is an 'Activity' section with filters for 'All time', 'All activities', and 'All types'. Below this, there is a section for 'Upcoming & Overdue' activities, which currently shows no activities.

Related	Details
Employment Cost Name	Record Type
Employers Liability Insurance	Insurance
Assignment Handling	Globally Enabled
Fixed	☒
Location	Last Date Rate Calc Update Completed
All States	
Has Rate Calc Update Pending	Last Date Rate Calc Update Required
☐	

9. For Payroll Tax or WorkCover record Types, populate the following required fields to provide the base details of the Employment Cost record (see Figure 7):
 - a. To define a unique identifier for the Employment Cost, populate the **Employment Cost Name** field.
 - b. To define the Location that is associated with this Employment Cost, populate the **Location** field using the lookup options available.
 - If a specific Location is not applicable, populate this field with a generic Location record, such as **All**.
10. In most scenarios, Employment costs are not client-specific and are used globally. The **Globally Enabled** checkbox is currently not in use, except for listing Employment Costs under the Globally Enabled list on a Rate Calculator.
11. Click on the **Save** button.

Figure 7

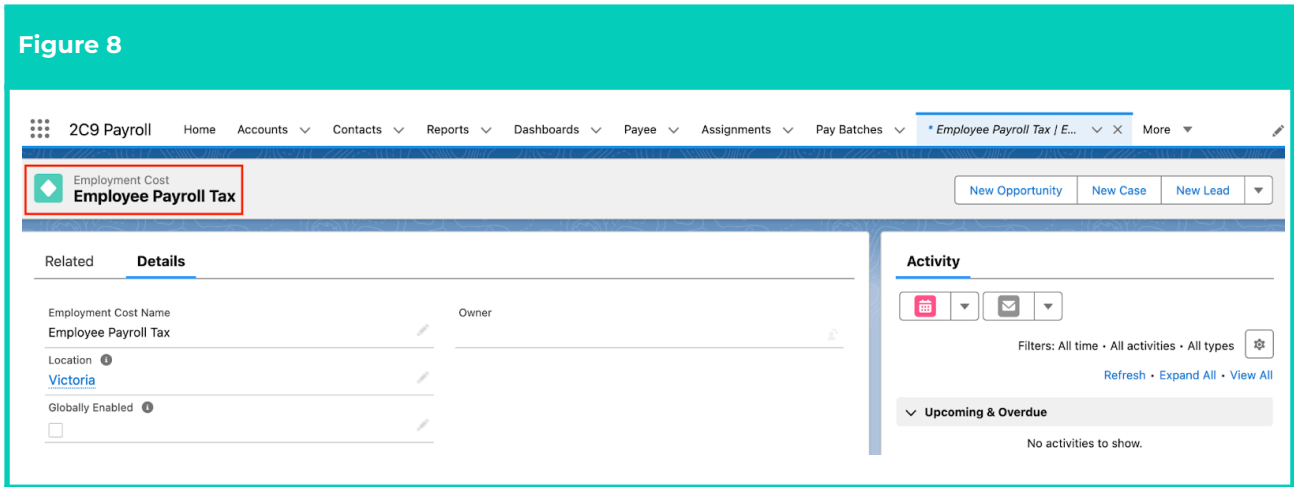

Important Notes

(Figure 7)

While one Employment Cost Item must be created for every Location record, individual Location records should NOT be populated for the parent Employment Cost. Instead, a single catch-all Location record, such as All Locations or Any Location, should be used within Rate Calculator Templates.

12. A new **Employment Cost** record is now created (see Figure 8).

Figure 8

The screenshot displays the 2C9 Payroll interface. At the top, the navigation bar includes '2C9 Payroll', 'Home', 'Accounts', 'Contacts', 'Reports', 'Dashboards', 'Payee', 'Assignments', 'Pay Batches', and a dropdown menu for 'Employee Payroll Tax / E...'. Below the navigation bar, the 'Employment Cost' section is highlighted with a red box, showing 'Employee Payroll Tax' as the selected record. The 'Details' tab is active, showing the record's name, location (Victoria), and globally enabled status. The 'Activity' section on the right shows no activities to show.

Employment Cost records CAN NOT be deleted if they have related records or are used in other records. Deleting records is not recommended unless absolutely essential.

13. To modify an existing **Employment Cost** record, open the required record and select the **Edit** button available on the top right side of the page. You can also double click within fields that need editing or just click on the pencil icon  that appears within fields when hovering with your cursor.
14. When complete, click on the **Save** button.

Field Descriptions

Field Name	Description
Assignment Handling	Defines how the Effective and Expiry Dates of related Employment Cost Item will be applied to Rate Calculator Lines: • Fixed - enables separate Rate Calculator Lines to be created for every child Employment Cost Item within the effective period of the related Rate Calculator. • Rolling - enables Rate Calculator Lines to be created for only the most recent child Employment Cost Item.
Employment Cost Name	Indicates the unique name given to the Employment Cost for identification.
Globally Enabled	This checkbox is currently not in use. When it is functioning, the intention is that when ticked, the Employment Cost record will appear under the Globally Enabled list on the Rate Calculator record, rather than the Client Enabled list.
Last Date Rate Calc Update Completed	Indicates the time and date that the last update was completed for the Rate Calculator associated with this Employment Cost. This field is updated via system automation and should not be overridden.
Last Date Rate Calc Update Required	Indicates the time and date that the last update was required for the Rate Calculator associated with this Employment Cost. This field is updated via system automation and should not be overridden.
Location	Defines the Location associated with the Employment Cost. In most scenarios, this field must be populated as All .
