

About

The General Ledger functionality within 2c9 Payroll allows customers to configure a set of rules and defaults that supports the automated creation of Cost of Payroll Journals, Leave Accrual Journals and AR Invoices that are coded to each customer's unique General Ledger configurations. These can then be integrated into the company's General Ledger and AR Software either via an automated integration or via a manual extract.

Prerequisites

Prior to the creation of an Accounting Payroll Journal or Accounting Invoice, the following prerequisites must be met:

1. 2cloudnine Payroll Users must be running the Salesforce Lightning Experience.
2. Ensure the latest General Ledger Package is installed.
3. The configuration must be completed by Consultants as outlined in the 2cloudnine General Ledger - Configuration and Implementation Guide.
4. Pay Codes must be appropriately set up and functional.
5. Users processing within the General Ledger objects must have access to create, edit and delete the records.

Definitions

These are the important terms used within the General Ledger functionality:

- **Accounting Payroll Journal**
2cloudnine Payroll is able to produce Cost of Payroll Journals and Leave Accrual Journals which are collectively referred to as Accounting Payroll Journals. These journals are created against each completed Pay Batch
- **Accounting Invoices**
2cloudnine Payroll is able to produce AR invoices that are summarised and split by the General Ledger Revenue posting accounts. These Accounting Invoices are created from Temp, Perm and Fee invoices
- **Accounting System Setup**
The Accounting System Setup is where all default General Ledger posting accounts, departments and Costs codes are defined. It is the key setup record from which the creation of Accounting Payroll Journals and Accounting Invoices are based.
- **Accounting Segments**
Accounting Segments define accounting dimensions that are associated together by 2cloudnine Payroll to form various Accounting Payroll Journals and Accounting Invoices. These are available to be created in the various record types of:
 - Payment Entity
 - Invoice Entity
 - Natural Accounts
 - Assignment Departments
 - Cost Codes
 - Locations
- **Accounting Assignment Department**
Accounting Assignment Departments allow the users to further split a Payroll Journal or Accounting Invoice across one or more departments

- **Accounting Default Accounts**

The Accounting Default Accounts are used by the General Ledger package to automatically assign the default Natural Account dimension for a specified Pay Code, which is different from the Default Natural Account specified in the Accounting System Setup record.

- **Accounting Payment Entity Defaults**

The Accounting Payment Entity Default record contains all the Default Accounting dimensions of each Payment Entity.

- **Employment Costs and Assignment Costs**

Employment Costs are used within both Rate Calculators to define employment costs for the Invoice Rate calculation, as well as in the General Ledger, to detail the specific employment costs that need to be accounted for as additional on costs in the Payroll Journals. This includes support for Payroll Tax, Workcover and Superannuation calculations for each Pay Transaction.

- **Employment Cost Template Groups**

Employment Cost Template Groups are used to define a group of Employment Cost records to be created on the related Assignment.

- **Locations**

The Locations record holds the location information that is used to filter and relate Employment Cost Item records.

- **Pay Transaction Distribution**

Pay Transaction Distribution records are a breakdown of all the Employment Costs against each Pay Transaction. Note that these are created once the Pay Batch associated with the Pay Transaction has a status of Payment File Released.

General Ledger Interface Appearance and Usability

- The pages within the General Ledger package are Lightning Enabled and must only be used when the Salesforce Lightning Experience is active.
- All dates and times are displayed as per the location of the logged in User.
- Currency is calculated at 6 decimal places.
- The default display resolution supported for the General Ledger package is 1920 x 1080 (1080p) scaled at 100%. The minimum display resolution supported is 1024 x 768 as per the Salesforce standard.
- The pages within the General Ledger package will automatically resize in width and height so that the components are stretched appropriately depending on resolution.
- In the event that the fields / tabs within the package are unclear or overlap, zoom out (or zoom in) through the web browser as needed.

General Overviews

The General Ledger functionality can be split into three parts: Core Setup, Referencing GL data and System Processes. Each part is detailed below in a diagram.

Core Setup

The following documents provide the detailed information required to use the General Ledger functionality:

- [ORG Accounting System Setup](#) (Steps 1 and 2)
- Accounting Segments:
 - [ORG Create Accounting Segments - Payment Entity](#)
 - [ORG Create Accounting Segments - Invoice Entity](#)
 - [ORG Create Accounting Segments - Natural Account](#)
 - [ORG Create Accounting Segments - Assignment Department](#)
 - [ORG Create Accounting Segments - Cost Code](#)
 - [ORG Create Accounting Segments - Location](#)
- [ORG Accounting System Setup](#) (Step 3)
- [ORG Accounting Payment Entity Defaults](#)
- [ORG Accounting Invoice Type](#) (if invoicing occurs in this Org)
- Accounting Default Accounts:
 - [ORG Accounting Default Account - Earnings](#)
 - [ORG Accounting Default Account - Deductions](#)
 - [ORG Accounting Default Account - Allowances and Expenses](#)
 - [ORG Accounting Default Account - Leave Rules](#)
- [ORG Create a Location Record](#)
- [ORG Create an Employment Cost record - All record types](#)
 - Payroll Tax
 - Custom Cost 1, 2, 3, and 4
 - Custom Post Cost 1, 2, 3, and 4
 - Insurance
 - Superannuation
 - WHS
 - WorkCover
- [ORG Create an Employment Cost Template Group](#)

General Ledger

Process Map for GL Core Data Record Creation

Diagram Key

- Required Action
- Multiple Required Actions
- ◇ Condition
- Conditional Required Action
- Multiple Conditional Required Actions
- Automated Action

Referencing GL data

- Assignments to reference the Department:
 - Creation of [Accounting Assignment Departments](#) (created automatically if the Department field is populated on the Assignment record).
- Assignments to reference the Employee Cost Template Group:
 - Creation of Assignment Costs
 - Pay Transaction Distributions will create and report in the Payroll Journal
- Timesheet Entries to reference the Cost Codes:
 - Payroll Journal will breakdown to the Cost Codes

System Processes

- Generate Invoices
 - [ORG Create an Accounting Invoice](#)
- Progress Pay Batch to Payment File Released
 - Payroll Journal creates automatically
