

### Purpose

The purpose of this quick reference guide is to step through the process of resolving the Reconciliation results, which is the last step of the Reconciliation process and required only when there are failed results. The intended audience for this document are System Administrators and Payroll Users.

The Resolve function is an automated function performed after the manual review to ensure Payee Aggregates balance the Pay Transactions paid throughout the year to Payees.

### Steps

#### Resolving Failed Reconciliation Results

To resolve failed reconciliation results, the following steps should be completed:

1. Click on the **App Launcher** icon. (See Figure 1)
2. Go to the **Reconciliation Manager** App by using the Search function. (See Figure 2)

Figure 1

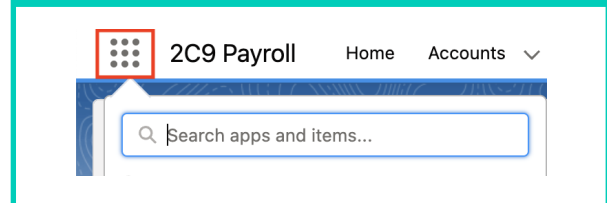

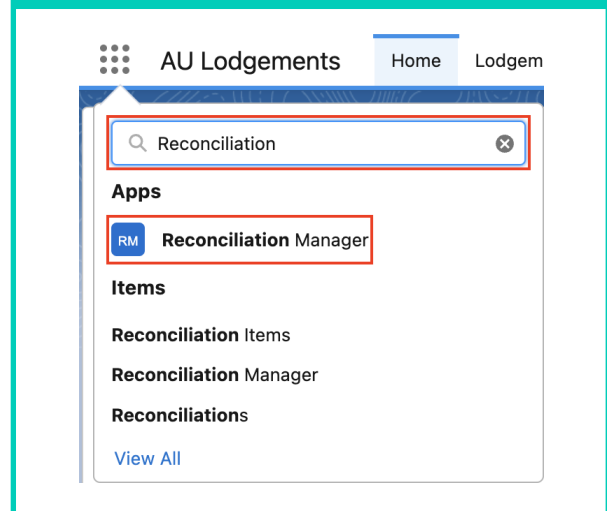

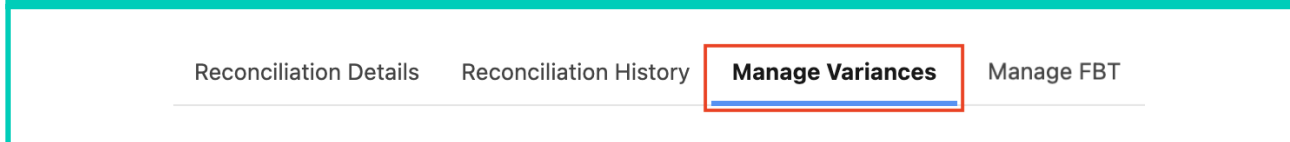

Figure 2

3. In the Reconciliation Manager App, ensure **Manage Variances** sub-tab is selected to search and resolve the Variances. (See Figure 3)

Figure 3

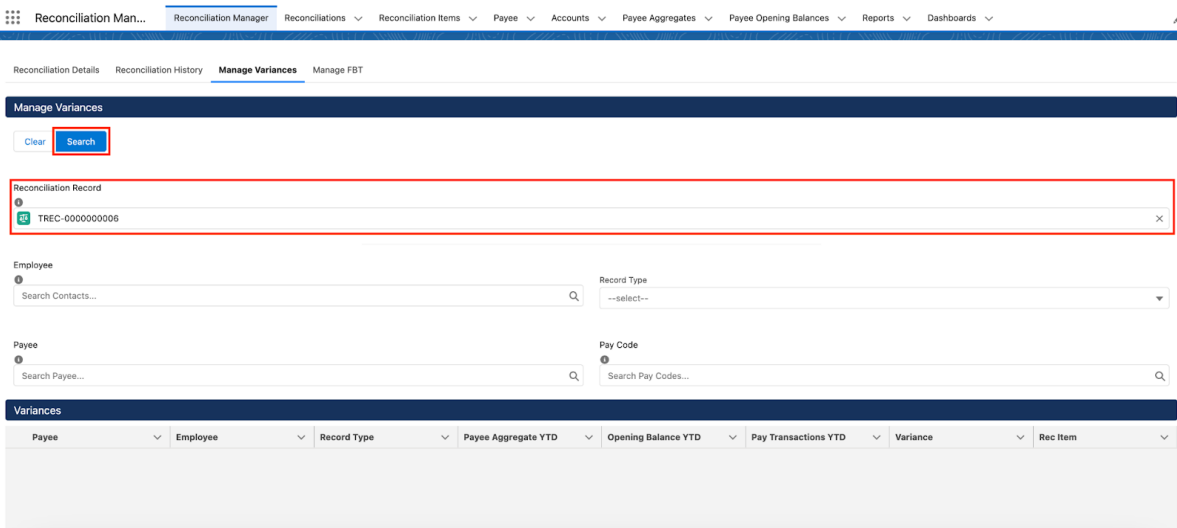

4. Populate the following required fields to filter the records: (See Figure 4)
  - a. **Reconciliation Record**
5. To further filter the variances that will display, populate from the available fields of **Record Type**, **Pay Code**, **Employee** and **Payee** as required, or skip these fields to display all variances within the Reconciliation Record selected in step 4.
6. Click on the **Search** button.

All of the filters above allow only one value in each field. Therefore, you can either search one item at a time or you can search all (if you skip the field). If you need to review multiple values (two, three or more), they must be reviewed separately.
